# Pavlowa dances to the music of played on her Co

PAYLONA DREET

New York, April 20th, 1914

Columbia Graphophone Company, Woolworth Building, New York City,

Gentlemen:-

Since I have been in your country I have been amazed to see the popularity of the talking machine record when used with the dance. This so excited my curiosity that I have made it a great study and think it is due you to say that Columbia instruments and Columbia dance records over all others have my unqualified endorsement.

I use your Grafonola and dance records in my rehearsals with complete satisfaction and find your dance records truly represent the very SPIRIT of the dance. Their tempo, rhythm, clarity and musical qualities simply charm me.

I am convinced that all who dance can get great satisfaction from the use of your Grafonolas and records.

Sincerely yours,

Am Forther

Vernon Castle writes: "I want to congratulate you on the excellent dance records you have recently issued; they are the best I have heard. I am using a Columbia Grand Grafonola and Columbia Records at Castle House where they are attracting extraordinary attention. The records are played in perfect dance time and are frequently encored by our patrons."

# Learn to Dance— in your own home

Will you pay 75 cents to learn the Hesitation from the most successful teacher in the country? Or the One-Step, or the Maxixe, or the Tango?

#### 1—One-Step

(Instruction)
On reverse side a full dance selection "Goodbye Broadway" (One-step). Ask for Record No. A1542 . . . 75c

#### 2—Hesitation

(Instruction)

On reverse side a full dance selection "Columbia Hesitation." Ask for Record No. A1543 ......75c

#### 3—Maxixe

(Instruction)

On reverse side a full dance selection "Florence Maxixe." Ask for Record No. A1540 . . . . . . . 75c

#### 4-Tango

(Instruction)

On reverse side a full dance selection "The Aëroplane" (Tango). Ask for Record No. A1541 . . . . . . . 75c We have just issued Four Columbia Double-Disc Dance Instruction Records, each prepared by G. Hepburn Wilson, and each with a complete dance selection on the reverse side—and with any one of them your Columbia dealer will present to you G. Hepburn Wilson's book—"How to Dance the Modern Dances." If you don't locate a Columbia dealer, write to us and we will see that you are supplied. The lessons in the book seem to us the first practical instructions ever written.

The pictures that illustrate them were all posed by Mr. Wilson.

But with the book and the records you have the most successful teacher in New York right there with you. The instructions in the book are crystallized in the spoken directions that you hear on the record: the music is played for you with emphatic and faultless rhythm, and the tempo is counted for you before the music and with the music:—you have to dance.

Do you realize how very easy it is to find out if a Grafonola will give you pleasure enough to pay for itself? How willing every Columbia dealer is to send a complete outfit to your home, subject to approval; and how little it will cost if you are satisfied? This Columbia Grafonola "Jewel," for instance: \$35—and on small monthly payments at that, if you prefer.

# Che Quest of Gold Light

#### Talks about MAZDA No.5

Not the name

of a thing

but the mark

of a Service"

WITCH on the current that causes an electric incandescent lamp to glow. What happens? You get light, but also heat. Since your eye is a special instrument particularly sensitive to light, since you read a book with light and not with heat, the more light that you get from your lamp the more satisfactory should be the result in every

way. A light which is brilliant but cold would represent the ideal of efficiency.

Like astronomers who can tell you what metals are glowing in a star so distant that its light reaches the earth only after the lapse of centuries, scientists who specialize in illumination can tell you much about this ideal light. Each decade they approach their cold ideal a little nearer. Will the ideal ever be reached?

Whether it is reached or not, the incan-descent electric lamp will grow steadily colder, steadily more efficient, thanks to the Research Laboratories of the General Electric Company at Schenectady.

In these laboratories a corps of picked men, each an expert in some phase of illumination, men who are in communication with the foremost European investigators of light, are constantly at work. After many months of patient experimenting the art of drawing tungsten into a delicate wire was discovered in these laboratories. Thus it became possible to make the new filament which glows in the MAZDA lamp of today and which has sup-planted the old carbon filament because three times as much light can be obtained for a given amount of current.

The Research Laboratories of the General Electric Company represent almost every branch of technical knowledge—chemistry, metallurgy, physiology, psychology, physics, microscopy, engineering, optics.

In these laboratories, scientists conduct many researches along advanced theoretical What is the secret of the phosphorescent glow that emanates from certain marine animals and decaying organic matter? May not the cold light be similarly produced? Why can the glow-worm shine in your hand and never burn your skin? What is the exact color of daylight? Is the best artificial light a miniature sun or a body with a brilliancy not so white? Scores of such problems must be attacked in the quest of the ideal light.

But even more important commercially is research that gives promise of immediate

by MAZDA Service - a lamp in which the best scientific thought of the time is You can hold a glow-worm in your hand—the light is cold. It is one object of MAZDA Service to discover the secret of cold light. GENERAL ELECTRIC COMPANY MAZDA Service means constant experi-MAZDA Service means constant experi-menting, constant testing, constant selecting of new developments in pro-ducing light. Specialists in every branch of science are engaged in this endless task, all with the aim of making MAZDA always the mark of the furthest advance in the science of illumination. Here a microscopist is shown at work.

Suppose that the chemists, for example, ceaselessly experiment-ing in the laboratories, discover a way of preparing an element so that it is able to yield much light without breaking down readily under the electric current. Their discovery may mean the birth of a new lamp, or it may come to naught. It must be subjected to

critical study by other scientists. The physicist steps in with all his spectroscopes, his photometers, his analytical in-struments. He determines how much of the glow that comes from the new material is light and how much is heat, in other words, how much more efficient is the new material than anything thus far discovered; he estimates to a nicety what is the candle power of the new material for a measured amount of current; he devises better physical conditions for the material to perform its function. Next, the microscopist, perhaps, studies it with the aid of powerful lenses in order to learn how it withstands the pitting and the scoring action of the current.

Thus the new material is passed through successive laboratories, from scientist to scientist, from engineer to engineer. If the discovery proves to be of commercial importance the General Electric Company transmits it to its own lamp manufacturing centers at Cleveland and Harrison and to other companies entitled to learn of it.

This constant research, this ceaseless effort to improve the incandescent lamp, this transmission of an important discovery from the General Electric Company constitute MAZDA Service. When you see MAZDA on a bulb, think not of the shining lamp itself, but of the Service received by its particular authorized manufacturer, of the thousands of experiments that had to be performed in his interest and your interest, of the hundreds of light producers that were developed and tested before one was finally selected and included in the MAZDA that you screw into

Because the work of the Research Laboratories is never ended, MAZDA Service is continuous. As new discoveries are made that bring us a little nearer the ideal cold light they will be applied in making new lamps, which like their predecessors will be marked MAZDA. Hence MAZDA will always be found on the latest lamps evolved

#### FREDDY ET CIE

(Continued from Page 9)

Her voice faltered, and Freddy, with a gesture, dismissed his lady assistants. Then he removed his mask. Their eyes met and Cornelia uttered a faint exclamation:

"Oh, my! You're just like him!"
"Who is he?" asked Freddy.
"I can't quite say, because I don't
now," returned Cornelia; "but all girls know. have their ideals from the time they wear Swiss pinafores to the time they wear forty-eight-inch corsets. And I won't deny"— her voice trembled—"that you fill the bill. My! What are you doing?"

For Freddy had grasped his materials and was making a hat. It was of palest blush talls with a group of pink recess and

blush tulle with a crown of pink roses, and an aigret of flamingo plumes was fastened

with a Cupid's bow in pink topaz.

"Love's first confession," the young man
murmured as he bit off the last thread, should be whispered beneath a hat like And he gracefully placed it on

Cornelia's raven hair.

Mrs. Vivianson, her ear at the keyhole of a side door, quivered from head to foot with rage and jealousy. Time was when he, a penniless, high-bred boy, had implored her to marry him. Now—her blood boiled at the remembrance of the half hint, the veiled suggestion she had made, that they should unite in a more intimate partnership than that already consolidated. With her jealousy was mingled despair! So long as reddy and his hats remained the fashion, the shop would pay, and pay royally. There had as yet occurred no abatement in the onflow of aristocratic patronage. To avow his identity—never really doubted—to become an engaged man, meant ruin to the business. The blood hummed in her head. She clung to the door handle and entered as Freddy, with real grace and eloquence, pleaded his suit. "And you are really a Marquis' second

son, though you make hats for money?" she heard Cornelia say. "I always guessed you had old English blood in you, from the tone of your voice and the shape of your fingernails, even when you wore a mask. And it seemed as though I couldn't do anything but buy hats. I surmised it was vanity at the time, but now I suppose it

was—love!"
"My dearest!" said Freddy, bending his blond head over her jeweled hands. Cornelia! I will make you a hat every day when we are married. Ah! I have it! You shall wear one of mine to go away in on the day we are wed—the inspiration of a bridegroom, thought out and achieved between the church door and the chancel. What an idea for a lover! What an advertisement for the shop!"

His blue eyes beamed at the thought; but Cornelia's face fell.

I don't know how to say it, dear, but we shall never be married. Papa is per-fectly rocky on one point, and that is that the man I marry shall never have dabbled so much as his little finger in trade. 'You have dollars enough to buy one of the real high-toned sort,' he keeps saying; 'and if blood royal is to be got for money Silas P. Vanderdecken is the man to get it. So run along and play, little girl, till the right man comes along.' And I know he'll say you're the wrong one."

Freddy's complexion, grown transparent from excess of emotion and lack of exercise, paled to an ivory hue. His sedentary life had softened his condition and unstrung his nerves. He adored Cornelia, and had looked forward to a lifetime spent in adorning her beauty with bonnets of the most becoming shapes and designs. Now that a coarse transatlantic millionaire, with soft shirtfronts and broad-brimmed felt hats, might step in and shatter forever his beautiful dream of union, bitter revulsion seized him. He feared his fate. What was he? The second son of a poor Marquis, with a particularly healthy elder brother! He looked on the chiffons, the flowers and the leathers that surrounded him, and feit that the hopes of a heart reared on so frail a basis were insecure indeed. Then his old blood rallied to his heart; and he rose from the divan and clasped the now tearful

Cornelia to his breast.
"Go, my dearest!" he said. "Tell all to your father—plead for me! Do not write or wire—bring me his verdict to-morrow. Meantime I will compose two hats. Each shall be a masterpiece—a swan song of my art. One is to be worn if"—his voice broke—"if I am to be happy; the other if I am fated to despair. Go now; for I must

be alone to carry out my inspiration."

And Cornelia went. Then Freddy, sternly refusing to receive any more customers that day, set himself to the completion of his task. Before very long both hats were actualities. Hat Number One was an Empire shape of dead-leaf beaver, the crown draped with dove-colored silk, a spray of sere oak leaves and rue in front; a fine scari of black lace, partly to veil the face of the wearer, thrown back over one side of the brim and caught with a clasp of black pearl set in oxidized silver. It breathed of chastened woe and temperate sadness, and was to be worn if Papa Vanderdecken persisted

in refusing to accept Freddy as a suitor.

But Hat Number Two! It was of the palest blue guipure straw, draped with coral silk and Cluny lace. In front was a spray of moss rosebuds and forget-me-nots: 's wings of burnished hues were set at each side. It was the very hat to be worn by a bringer of joyful news, the ideal hat under which might be appropriately ex-changed the first kiss of plighted passion. On it Freddy pinned a fairylike card, white

and gold-edged.
"If I am to be happy wear this," was written on it; and on a buff card attached to the hat of rejection he inscribed: "Wear this if I am to be unhappy." Then he closed the large double bandbox in which he had packed the hats, breathed a kiss into the folds of the silver paper and, ringing the bell, bade a messenger carry the box to the hotel at which Cornelia Vanderdecken was staying, and where, millionairess though she was, she was still content to dress with the help of a deft maid and the adoration of a devoted companion. Then the ex-hausted artist fell back on the divan. Cornelia was to come at twelve on the

morrow. "Then I shall learn my fate!" said Freddy.

He drove home in his brougham and passed a sleepless night. The fateful hour found him again on his divan, surrounded by the materials of his craft, waiting feverishly for Cornelia.

The curtains parted. He started up at the rustling of her gown and the jingling of her bangles. Horror! She wore the somber hat of sorrow, though under its shadow her face was curiously bright.

She advanced toward Freddy. He reeled and staggered backward, raised his white hand to his delicate throat, and fell fainting among his cushions. Cornelia screamed. Mrs. Vivianson and her young ladies came hurrying in. As the stylish widow noted Cornelia's headgear her eyes flashed and joy was in her face. Then it clouded over, for she knew that Papa Vanderdecken had been coaxed over and Freddy was an accepted man. My reader, being exceptionally acute, will realize that the jealous woman had

changed the tickets on the hats.
"Not that it was much use!" she avowed to herself as she entered with smelling salts and burned feathers to restore Freddy's con-sciousness. "When he revives she will tell him the truth."

Freddy regained consciousness only to lose it in the ravings of delirium, however. He had an attack of brain fever in which he wandered through groves of bonnet shops looking unavailingly for Cornelia. Then came the crisis; and he woke up with an ice bandage on, to find himself in his bedroom at Glantyre House, with the Marchioness leaning over him.

"Mother, my heart is broken!" said the boy—he was really little more. "The world exists no more for me. Let me make my last hat—and leave it." "Oh, Freddy, don't you know me!" gasped Cornelia in the background; but the

repentant woman who had brought about

all this trouble drew the girl away. "Even good news broken suddenly to him in his weak state," said Mrs. Vivianson in a

rapid whisper, "may prove fatal. I have a plan that may gradually enlighten him." "I trust you," said Cornelia. "You have saved his life with your nursing. Now give

him back to me."
"Hush!" said Mrs. Vivianson.

She had quickly dispatched a messenge to Condover Street, and now, as Freddy again opened his eyes and repeated his pitcous request, the messenger returned. Then all present gathered about the bed, the inmate of which had been raised on supporting

#### A Loose-Leaf System Device and Form For Every Purpose

If you have a Loose Leaf System Device or Form problem no matter what it is in the Loose I-P Leaf line of 1700 items you will andoubt-edly find the exact Device and Form you require for its quick, accurate solution.

#### Ready-Made-Stock Prices

There undoubtedly an't a conceivable Loose-Leaf System Device or Form requirement that our expert Accountants have not anticipated and prepared for. Only in the Loose I-P Leaf line can you find ready-made at stock prices a Device and Form for almost every purpose-Ledgers, Invoke Books, Stenographic Note Books, Journals, Memo Books for Business Houses, Salesmen, Doctors, Engineers and everyone lise.

#### I-P Saves Special Material Cost

These 1700 Loose I-P Leaf tenns, ready-made at stock prices, nave you the extra ex-pense of consulting high-priced system experts and of buying made-to-order Devices and Forms. Once you buy made-to-order Devices, you will for-ever be compelled to re-order expensive made-to-order forms.

#### Your Problems Already Solved

Don't wurry about your Louse-Leaf System De-vice and Form Prob-lems—ask your dealer to show you how the Loose I-P Leaf line and only feel to be them Loose I-P Leaf line undoobtedly has them already solved. If you are in business, you need one or more of these Loose I-P Leaf items to enable you to operate your bookkeeping department on a systematic, accurate, mosely-saving basis. If you are an employee or professional man, you need some of these Loose I-P Leaf items to keep correct seconds of year cannings, expenditures, accounts, etc. Remember, every Loose I-P Leaf item is guaranteed accurate, scientific and mechan-

curate, scientific and mechas-ically perfect. We are the largest exclusive Loose-Lead manufacturers in the world— a \$1,200,000 institution, with

Kansas City, Missouri

New York Chicago Philadelphia

It was a queer scene as the shaded electric light above the bed played on Freddy's pal-

lid features, showing the ravages of sickness.
"Now!" said Mrs. Vivianson. She
placed the milliner's box on the bed, and Freddy's feeble fingers, diving into it, drew

forth a spray of orange blossoms and a diaphanous cloud of filmy lace.

"Black—not white!" Freddy gasped brokenly. "It is a mourning toque that I must make. Let Cornelia wear it at my funored."

"Cornelia will not wear it at your funeral, Freddy," said Mrs. Vivianson, bending over him; "for she is going to marry you—not to bury you."

Drawing the tourful sid to Freddy's side.

Drawing the tearful girl to Freddy's side, she flung over her beautiful head the bridal veil and crowned her with a wreath of orange blossoms.

And as, with a feeble cry, Freddy opened his wasted arms and Cornelia fell into them, Mrs. Vivianson, her work of atonement completed, pressed the offered hand of Freddy's mother and hurried out of the room and out of the story, which ends, as stories ought, happily for the lovers, who are now honeymooning in the Riviera.

#### Cooked or Raw

IS COOKING an error? Will the next diet theory call for eating raw food— though warmed if you wish it? The Lon-don Lancet has raised the question, and other medical journals have asked as well as answered it, because of the recent discovery that cooking destroys some of a certain tiny but very valuable substance in food, and that a lack of this substance is the cause of a number of diseases.

Apparently the answer is that people may eat cooked food if they wish to do so, but that they should eat a larger proportion of clean raw food than they now do. Cooking does not make food more digestible, but it makes it look, taste and smell better, and so increases the stomach's enthusiasm for tackling the job of digesting a dinner. In the tropics thorough cooking is advised to kill any germs that may have strayed into the food and, to some extent, this is a purpose of cooking in temperate countries.

This necessary substance in food appears in a number of chemical forms in exceedingly small proportions, and in most foods; and the various forms are called vitamines. Some of them can stand thorough boiling and others cannot; but cooking at higher temperatures than the boiling point kills most of them. It has been made clear very recently that an animal deprived of them will die; but it is not so clear how much is needed for health. Scurvey, rickets and beriber are among the discover attriband beriberi are among the diseases attrib-uted to the lack of vitamines in food.

Potatoes are rich in vitamines, which explains the value of potatoes in treating scurvy, a fact long known. The investigators who are now studying vitamines may be expected to catalogue more diseases caused by vitamine deficiency before long. The theory has been suggested that a dis-ease like beriberi, which has been noticed occasionally among prisoners in American jails, may be due to a diet of food that has

been cooked too well. Vitamines exist in wheat bran in a proportion much greater than in the wheat itself, but this discovery adds nothing new to the old controversy as to the compar-ative merits of whole-wheat bread and white bread; for any vitamines in either, according to the latest study, are destroyed by the baking.

Polished rice is now the accepted cause of beriberi; and this fits in perfectly with the vitamine theory, for the vitamines are eliminated in the preparation of such rice, though boiled unpolished rice still contains some of the vitamines. Fresh milk and eggs are rich in vitamines, which may be one of the reasons for the high value of those articles as a diet for people suffering from lung trouble.

## A Barrett Specification Roof was put on this building because-

the architect knew all about the different types of roofing and further knew that the National Biscuit Company were mighty particular people.

They had a big plant and they wanted it covered with a roofing that would give longest service at lowest cost.

chitect knew there was only one choice, namely: a Barrett Specification Roof, because it gives longer service at a lower unit cost (the cost per square foot per year of service) than any other roofing he could specify.

twenty years or more with statements.

Under such conditions the ar- no maintenance cost. Many such roofs have lasted thirty years. Every permanent building, whether large or small, should carry a Barrett Specification Roof because that means the most economical roof, and one that will be free from leaks and maintenance.

This building is now covered Ask any first-class architect with a Barrett Specification about this proposition, and he Roof and it will probably last will verify all of the foregoing

#### Special Note

We advise incorporating in plans the full wording of The Barrett Specification in order to avoid any misunderstanding.

If any abbreviated form is desired, however, the following is suggested: ROOFING-Shall be a Barrett Specification Roof, laid as directed in printed Specification, revised August 15, 1911, using the materials specified and subject to the inspection requirement.

A Copy of The Barrett Specification with roofing diagrams mailed free on request.

#### CUTTING DOWN SOME STAPLE UNNECESSARIES

(Continued from Page 10)

will have ten or fifteen tons daily. Chemically these washings are good fuel, for they

contain more than eighty per cent carbon—
are really fine coke dust.

Mechanically, however, it is not easy to
utilize them, because the fine, fluffy residue
fed to boiler fires would simply fly up the

chimney again.
As it contains lampblack and iron oxide, some experts think it might be used for paintmaking; but in the end probably it will be pressed into briquettes by some economical process and used for fuel.

Smokewashing for the sake of cleanliness grew out of modern methods of utilizing gas from coke ovens and blast furnaces in the iron business. Once this gas was allowed to go up the chimney as smoke; but now, by elaborate devices for cleansing it from dust and other substances, fuel for power production in gas engines is obtained, as well as gas for burning in furnaces, under boilers, for illumination and for household use, and such chemical products as tar and ammonia. Even the iron dust in the blast-furnace gas is gathered, briquetted and

In one great American steel plant the saving amounts to a quarter million horse-power, of which forty-five per cent is used to generate all the electrical power needed for the works, thirty per cent is used for heating the blast, and the rest for other pur-poses. There is a twenty-five per cent surplus, however, which will eventually be turned into current for electrical furnaces. In France some fifty towns are now lighted

by surplus gas from coke ovens. Even more thorough is the utilization of smoke from copper smelters—a peculiarly offensive nuisance where it is allowed to pollute the air, for the fumes of copper ore,

rich in sulphur, kill trees and crops.

In Tennessee there are two smelting plants that turn this obnoxious smoke into sulphuric acid which, in turn, is used to make fertilizer—superphosphate—from the raw phosphate rock abundant in that locality; but the intricacies of the smoke problem will be seen when it is known that such treatment is possible only in a locality where the fortunate combination of raw materials is found. These plants are said to produce the cheapest indirect copper in the world; but for other smelters situated far from supplies of rock phosphate such a process is

at present economically impossible.

With the best intentions in the world, however, and after all the big plants in a factory center have washed their smoke or turned it into gas-engine power or sold it as a by-product, there must still be hun-dreds of smaller smokemakers to whom these methods are not possible.

#### Teamwork in Smoke Fighting

For the small smokemakers—little powerplants, railroad locomotives, steamboats, notels, apartment houses and homes in a section where soft coal is used—there are now two general courses that can be followed: First, organization to spread better knowledge of combustion, better devices for power and heat production, and better firing, so that the black smokecloud may be reduced, at least. Second, the use of some smokeless form of power or heat. The situation to-day is one where the majority of small smokemakers are follow-

ring the first course, making conditions tolerable until the second course is possible.

Teamwork has abolished far more smoke than all the inspectors, laws, fines and smoke-prevention devices. Automatic contraptions for eliminating smoke greatly outnumber the perpetual-motion machines, and without teamwork are of about as much

When there is a strong public sentiment for less smoke in a community everybody takes a little time to understand the complexities of the problem, instead of merely letting the smoke inspector classify the worst clouds through his umbrascope or interferometer.

Public sentiment leads smokemakers to take pride in good firing. Fuel is selected with technical knowledge; boilers and furnaces are improved and kept clean; firemen are paid better wages, trained in good firing and paid bonuses for results in power or heat that mean reduction of the smoke evil.

Every smokemaker becomes his own inspector, installing some device that showsdown in the engine room or office-the density of the smoke issuing from the top of a chimney at any moment.

Carelessness and ignorance are said to be responsible for ninety per cent of the worst smoke, and at the same time the technical knowledge necessary in reducing the evil is available to any community that has sufficient public spirit to get busy on broad, constructive lines. In some places the smoke-inspection bureau is now backed up by a smoke-prevention society of citizens on the lines of the famous one in Hamburg.

Germany.

In this latter society the members are chiefly owners of power plants, and they pay five dollars a year for membership. with five dollars more for each boiler. That entitles them to technical advice from the society's engineering experts, who help in the purchase of fuel, try out smokeprevention devices, inspect members' power plants and suggest improvements, and send round instructors who coach firemen in good stoking methods.

Of course the ultimate remedy for smoke is the use of smokeless power and heat, and these modern blessings are coming much faster than is generally realized and in a number of most interesting forms.

There are the smokeless fuels, for in-stance. Crude oil is one of them and is now stance. Crude oil is one of them and is now widely available for power plants, locomotives and ships, in the form for burning directly under boilers. New oilfields and cheaper transportation by pipelines and tankships have made it economically posible in sections where it was unknown a few years ago; and even where the first cost appears to be higher it may be quite as cheap.

#### New Smokeless Fuels

Petroleum residue contains not much more than half as many heat units as steam coal; but what it does contain can be burned with less waste than coal, and smoke damage is absent. Even where it is too costly for power, it is now the regular fuel for anneal-ing furnaces and lesser devices that formerly contributed their share of smoke.

Then come the coal-gas tars which have had an interesting history. Some years ag-the engineers seized on them as a promising fuel for smokeless steam raising because they were then abundant at two or three cents a gallon; but the automobile came along and these tars were found to be ideal for making dustless roads—and their value quickly doubled and trebled. The experts. however, have developed improved types of burners for utilizing tar under boilers, and are putting at the disposal of powerplant owners a series of cruder tars produced

in making water gas.

When the oils cannot be burned economically under a boiler they still have vest power-generating possibilities in oil engines which work on the explosion principle; and the explosion engine is being developed in so many ways that it is now an immense factor in smokeless power production. This type of engine will run on almost

anything that can be vaporized into an explosive mixture. Where an automobile must have highly volatile fuel, like gasoline or alcohol, this engine by its peculiar principle will volatilize heavy fuels like crude petroleum tar oils petroleum tar oils petroleum. petroleum, tar oils, petroleum residue and creosote oils. It has been successfully oper-ated on coal tars and train oil, peanut oil, castor oil, animal oils; in fact it is widely adapted to operate with whatever fuel happens to be cheapest in the locality. Europe has utilized it as a source of power for years, but in the United States its development is just beginning, chiefly because coal has been cheap and could be burned wastefully.

is also generated by the producer engine, a type requiring more volatile fuel but run on gas made from com burned smokelessly in a special product plant. Low-grade coals have been utilized and the gas-producer idea is being applied to sawdust, woodwaste, spent tanbark coconut shells, shavings, coffee and coost husks, olive refuse, cottonseed cake, in fact almost anything burnable that happens to be lying round the neighborhood. It is largely a question of how handy that miscellaneous sornething happens to be and

When a GMC representative tells you that we build a truck to fit your service, he means that we have not only the right size, but, more important, the right ower, either gasoline or electric, to meet your requirements

GMC gasoline and electric trucks are designed with an understanding of what is required of a truck in your business. For, regardless of the kind of merchandise you handle, the size of load or the length of haul, there is a GMC truck built to do the work economically and well.

And you can feel confident that the right GMC truck for your business is high grade in every way — design, materials, work-manship, everything that goes to make a reliable, highly satisfactory motor truck.

Because of big production and low overhead expense, GMC trucks can be bought at prices that are meeting the approval of business men who best know motor truck values.

whether the fellow who wants cheap smoke-

less power knows enough to utilize it or to find somebody who will tell him. Then there is the smokeless burning of finely powdered fuel. At a smelter there was a crude-oil burner in use consuming ninety gallons of oil an hour. That was equivalent to nearly half a ton of coal and was cheaper—and, of course, smokeless. A new burner consuming powdered coal was installed and did the same work with only forty pounds of coal an hour and a reduction of cost. By burning coal in powdered form smoke was done away with, and forty pounds did the work of half a ton. In Sweden a railroad locomotive has been

successfully fired with powdered peat on the same plan—a ton and a half of the peat giving results equal to a ton of coal burned

in the ordinary way.

Powdered-coal firing is now used in this country for cement works and smelting plants; and, with certain refinements, it will probably have a wider application. The chief drawback is rather a singular one, for the fine coaldust is blown out of a nozzle under pressure and looks just like a gas flame

in burning.

Practically nothing goes up the chimney, for the whole burnable substance of the coal is converted into heat almost instantly and the ashes are merely slag. Directed into rock or ore this fierce heat is ideal; but it is a welding flame, and when used under a boiler quickly breaks down metal, firebrick and the most refractory materials. However, it will surely be tamed and set to smokeless steam production in time, and will do its part in bringing about the smokeless era.

In about the same state of development is the mechanical stoker for railroad locomotives-for years the quest of engineers and inventors—certain to cut operating costs, increase the power of locomotives, relieve human muscles of some of the hardest manual labor left in the modern industrial world, and do away with most of the locomotive smoke. Within the past year successful locomotive stokers seem to have been attained. Tests conducted on Eastern roads lead railroad men to believe that the problem has been solved.

#### Smokeless Citles of the Future

Our smokeless cities of the future will be run by devices of this sort; in fact, they are run now with smokeless apparatus to such an extent that if to-morrow-suddenly-all the power necessary in operation had to be generated by the crude boilers and hand-firing of twenty years ago, the clouds of smoke rising into the heavens would be more than a nuisance: they would be a calamity.

Practically all the research and invention in power production to-day is in the di-rection of smokelessness. Waterpower is harnessed to turbines, electric current generated and transmitted over systems of conductors that reach farther and farther from the source of power every year. The railroads of the very near future will be operated by electric current and their coal traffic must vanish—for coal is to be made to give up its power before it leaves the mines. It will be distilled in coke ovens of the regenerative type. Its gases and tars will be utilized to run explosion engines, and these will run dynamos-producing current for transmission to the cities.

The coke will go to the cities for heating purposes, and heating will probably be on the central-station system, whereby all the work is done at a single plant and the steam piped to houses, hotels, apartments, stores,

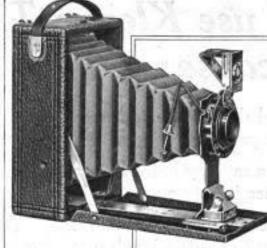

Tactories—or wherever it is needed.

While the electrical men have been busy the gas men have not been idle. Once on a time it was predicted that electric lighting must bring about the extinction of the gas industry; but the gas man has steadily refused to regard himself as a dead one, and in the development of gas cooking in homes and gas appliances for industrial purposes

Together they are running a neck-and-neck race toward the goal of smokeless--and that is the general goal toward which every other modern tendency in work and living is headed.

Editor's Note-This is the second in a series of articles by James H. Collins. The third will appear in an early number.

An ideal vacation camera, making 314 x 51/2 pictures (post card size) for

\$10.50

Loads in day-

Weighs only 29 ounces

Dimensions 23/8 x 45/8 x 73/8 inches

Covered with genuine grain leather

## Film Premo

A remarkably light, compact camera for pictures of the artistic 3A proportion.

Can be carried and used anywhere, and is so easy to operate that anyone who can read the simple instructions that come with the camera can make first-class pictures from the very start.

To load, merely open back, drop in Premo Film Pack, close back and all is ready. To change films for successive exposures just pull out successive film pack tabs.

This model is fitted with a tested meniscus achromatic lens of the highest quality obtainable. The shutter is the new Kodak Ball Bearing with cable release, and the camera is fitted with two tripod sockets, reversible brilliant finder, and is made throughout of the best of materials, by men who have spent their lives in camera making.

Get the new Premo catalogue—a book that no one interested in photography should be without. It describes the many Premo advantages fully—the daylight loading Film Premos, the Premosthat take films or plates with equal facility, the Premo Film Pack and tank developing system. It's free at the dealer's, or will be gladly mailed to any address on request.

#### CUTTING WITH A BLUNT KNIFE

not thought it worth while to put in it the interest I had put in dramatics and football. I was in a fair way to loaf through life as I had through college—soldiering along until the day when my job should get disgusted with me and throw me. It almost looked as though that day had come already. I had, indeed, been cutting with a blunt knife.

The next morning I went to Mr. Burton and asked him whether I could keep my job.

He said he would give me one more chance, for my father's sake.

"Thank you, sir," I said. "Then, if I still hold the job, may I give it up temporarily and go into the shops? I've been all kinds of a fool and I want to begin over."

I don't know that getting your hands and face dirty is going to help you any more than sitting in the office and adding

figures."
"I want to do it for the discipline," I said. "There are some fellows in that shop making stems who never see the complete object they are working toward. I am as stupid as they are. I want to get down and

"All right," he said. For six weeks I lived in the shops. I got to work at seven and left at five-thirty, with half an hour for lunch. I made stems at one machine; I finished scupping nuts at another. I worked in the foundry, helping to mold by air-pressure or using the hand-rammers for old-style work.

I was in the milling room and the finish-ing shop, where I got a splinter of steel in my eye and had it taken out by my neighboring worker. I was in the assembling and testing room, where I had my forehead cut open by a valve that flew off. I worked in the plating and buffing room, and even

in the wrapping room.

I thought and ate and slept valves. I gloried in the fact that the previous year the firm had produced two million and a quarter valves, which meant ten or fifteen million finished pieces—which again meant thirty or forty million operations. How I pestered the foreman with questions! I was

greedy for information.

When I got back to the office I had some practical experience, calloused hands, a chastened spirit and a greater greed than ever for information. I studied every detail of the business I could lay my hands on, from the organization of the different departments to the methods of checking the rates on the piecework tickets. No bit of knowledge was too great or too petty for me to go after, and no trouble it cost me counted. I no longer had time for evening frivolities; I was reading all I could get in books and technical magazines that bore on my business.

At the end of twelve months I was made

a promise clerk, at eleven hundred a year. The promise clerk's work is this: When an order comes in that cannot at once be filled completely the promise clerk goes round to the foremen in the shops and finds out how the work for the various parts is

going on and when it will be done, so that he can inform the customer.

#### What College Did Not Teach

He may have to go to several different shops before he can get the necessary promise for complete shipment. He may have to go to the foundry first for the casting promise; then to the milling room, where the castings are cleaned and milled; then to the finishing shop; then to the assembling room, where the valves are put together, and so on. The promise clerk has to have judgment; he must distinguish the relative importance of various orders.

After two years of that I was made stock-keeper—a really important position. I had to see that there was enough stock in the shop to keep it running and to keep the orders filled, and be careful not to have an overstock. My salary was fifteen hundred dollars and I was worth it. By this time I had begun to see that in order to get on I must apply to business the biggest asset in my personality, whatever that was. I decided that it was my power of getting on

with people. Now, though I had got on with people, I had not thought very much about judging them. I began after this to try and size them up—to see the man behind his words and looks. The next step was to see how I could use this asset. I might have gone out on the road, selling goods; but that

was work which did not attract me. I went on studying and thinking, never losing a chance either of making myself useful to the firm or of developing myself in the business.

At last matters settled themselves. First was made assistant manager; and here my chances to size up people and to de-velop my judgment and executive ability were greater than ever. Finally—when I was thirty-five—I got my great reward. I was made the manager of the employment department, with a salary of four thousand dollars, which has since gone up a bit.

I, who used to give the glad hand to my

college friends, now use my gifts in another fashion with hundreds of foreigners. The adaptability I used to employ in imitating the cat-and-dog fight of the German and Irishman I now use in meeting the thou-

sand daily problems of my department.

I have succeeded; but nothing I learned in college helped me to success, though I must say that a good deal I learned there has helped me in my leisure time. I do not regret having gone to college, but I do regret not having taught myself to work there. If I had I should have got on faster; should have come out a sharp blade, so far as the business world was concerned. As it was I came out a dull one; and it took unnecessarily hard knocks and hard work to sharpen me.

If, when I was in college, I had put my mind on what my future was to be, or had left before graduation to meet that future, I should now be ahead of where I am. I had good stuff in me and college ought to have brought it out before the business world

brought it out. I am going to send my boy to college, but I am not going to keep him there unless he has sense enough to do what my old man-

ager, Mr. Burton, advised—take his busi-ness, whatever it is, seriously.

In this competitive world a young man has to put himself to work—with his playtime spirit squelched and his faculties sharpened—to make the most of the job.

#### Too Much Honor

WILLIAM COLLIER, the actor, has a twelve-year-old son and a country home at St. James, on Long Island. One day in the spring the youngster came to him and said that he had just been elected captain-manager of his ball club, and in view of the honor conferred upon him he desired to show his appreciation in a substantial manner. He thought it would be rather a graceful thing if he presented his teammates with a tent under which they might hold their business sessions and map out campaigns against the rival nines of the neighborhood.

So Collier, Sr., donated the tent and a table and a dozen camp chairs for furnishings, and provided a site for it on his lawn. After the canvas had been pitched and the boys had assembled therein the donor slipped down to the back of the tent and hid there with his eye at a crack in order to hear and see how the boys conducted their meeting. He arrived just in time to hear his son say:

"My father gave us this tent, so I move we elect him an honorary member."

This motion was carried unanimously amid applause.

The first baseman stood up,
"Mr. Manager," he said, "we need some
uniforms—regular uniforms. How are we

going to get them?"
"I move," said the chairman, "that the honorary member be permitted to buy the uniforms.

By acclamation this motion also was adopted.

We need some new bats and a dozen balls and a catcher's mask and chest protector and a lot of gloves too,"

another voice.
"I move," said Master Collier, "that the honorary member be allowed to furnish those things."

There was not a dissenting voice among those present.

"I think we ought to hire a big coach to take us to the game," came a suggestion

from the shortstop. "That's right too," said the manager. "I move that

It was at this juncture that the honorary member stepped round to the front and tendered his resignation.

# See How This Hose is Made

Five layers of finest rubber and braided staple cotton. All cured to one durable, weather-proof, wear-proof unit to stand years of service.

But even that is not all. See the corrugations and the six heavy ribs. These make Goodyear Lawn Hose easy to handle and impossible to twist or kink.

As you yank Goodyear Lawn Hose around trees, brick walls and over gravel paths, these ribs protect it-add to the "glide."

#### Live Rubber

The seamless tube that carries the water is of live, active rubber that will not become hard and brittle. It stands the water, sun and strain without rotting. Sections cannot come apart-the scien-tific Goodyear construction makes it

And Goodyear Lawn Hose contains more rubber. It won't crack, chip, or quickly deteriorate. It is the hose that will give you years of service, even when exposed "on tap" from spring to fall.

#### LAWN HOSE

#### Buy Hose Wisely

Say "Goodyear." That means years of service—and better service. The trade-mark on every foot guarantees both quality and quantity

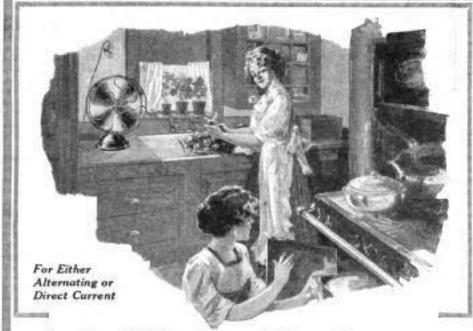

If your dealer happens to be out of Goodyear Lawn Hose, just send us his name. We will see that you are supplied immediately, by express, prepaid. Price in 50-foot lengths: 34-inch, 20c a foot; 36-inch, 19c a foot; 34-inch, 18c a foot. We recommend the 36-inch. You will find its size and weight best for average use.

Quantity Production

Studebaker engineers never lose sight of quality, quantity and price.

Their life work is to give the Studebaker owner the highest quality at a price as low as quantity production can bring it.

Studebaker engineers are also production experts; their work only begins with designing.

No man or set of men understands better than they do, the manufacturing economies of big production; or how to turn those savings into higher quality at lower prices.

They direct and oversee the scientific chemical and physical tests of raw metals and materials that result in rejection or acceptance.

They direct manufacturing; they insist on the utmost exactness in inspections; the most scrupulous care in assembling.

Their watchword is quantity production of quality cars—protect and perpetuate the good name of Studebaker.

That explains why we consider Studebaker cars the quality-equals of the costliest, though selling for hundreds less.

\$3,000,000 in Studebaker Machinery to Build Highest Quality at Lowest Prices. This huge hammer forges Studebaker crankshafts.

Were we to buy crankshafts from a parts manufacturer, each would cost us twice as much as it does produced in our own forge. So, although the equipment cost \$20,000, it saves each of 40,000 Studebaker owners half the production cost of this part—and gives him a better crankshaft, because we specify the chemical analysis of the raw steel and, after forging, put the metal through our own heat treatments.

of Quality Cars

What is there in the Studebaker SIX that justifies us in saying it is the greatest automobile value in the world?

Setting aside the things which the eye can see—such as the ample seating capacity, the splendid electric system, fine finish and beauty of body—here are some of the internal values:—

The full floating rear axle — its housing a light, tremendously strong Studebaker steel stamping.

Axle shafts so strong that one would support an 80-ton locomotive like a pendulum.

Each shaft so tough that to break it would require twisting through seven revolutions by a force equal to the weight of four tons at the end of a three-foot lever.

Camshaft, transmission and differential gears so hardened and toughened by heat-treatments that the sharpest file will not scratch, nor heavy hammer blows chip them.

Timken bearings throughout—which means even to the wheel hubs.

Springs that will stand 200,000 complete oscillations in a testing machine built to wear out springs as against 30,000 to 50,000, ordinarily accepted as good.

Two hundred forty-seven drop forgings—lighter and stronger than malleable iron castings.

A motor built complete in Studebaker foundry and machine shops — perfect in balance and alignment; a magnificent six-cylinder block casting.

We invite comparison with cars at any price to prove that the additional price buys no additional value.

Send for the Studebaker Proof Book, picturing and describing Studebaker processes.

#### Studebaker, Detroit

\$3,000,000 in Studebaker Machinery to Build Highest Quality at Lowest Prices

The beautiful Studebaker crowned fenders are made possible only by this ponderous machine—one of the largest and costliest used in motor car manufacture.

It saves us 65 per cent in fender manufacturing cost, and the difference goes into some other part or comes off the price.

So it is with every individual part and piece of chassis and body—higher quality or lower cost.

It's a Studebaker

# If ALL Tires Were PENNSYLVANIA VACUUM CUPTIRES

SKIDDING on slippery pavements—the greatest single cause of automobile accidents—would be unknown.

V. C. tires have been guaranteed for many years not to skid on wet or greasy pavements, else returnable at purchase price. Never a claim from a uset.

Tire trouble and expense-the greatest drawbacks to the use of automobiles-would be so normal and nominal as to constitute the least of all motoring complaints.

V. C. tires are guaranteed for a low minimum of 4,500 actual miles and maintain an average nearer twice that distance.

The oiled road would be a complete comfort-not to be avoided, but enjoyed.

V. C. tires are guaranteed absolutely immune to the rubber destroying effects of oil.

Every year adds enormously to the number of those who know Vacuum Cup Tires as the ONLY tires for utmost safety and service. 1914 has already broken previous yearly records. SOLD EVERYWHERE

#### THE MUTINEER OF THE MARY BLOUNT

(Continued from Page 5)

But the boats which put off from her to fasten to the whale are in a different cate-gory of shipbuilding. It was necessary for them to be swift, stanch and very buoyant. them to be swift, stanch and very buoyant. When racing yachts were still square-rigged for the most part, the whale boat had already been developed along these lines to a point beyond which it does not seem possible to go. Thirty feet long, two men can lift her. Paper thin, the seas can no more crush her than they can crush a cork. Rowed by four men, there is many a power bost that could not catch her. And down the wind, under sail, in any sort of weather, there is no boat of her size so swift or so sweet. As if all this was not enough, she is beautiful to the eye, as the Indian's canoe is beautiful, as is the newest cup defender. And she has shared in more daring deeds than all the great conquerors of history put together. put together.

No matter what part of the seven seas you happen to be in, Cape Horn, if you have to round it, is always too near for comfort. Taking an occasional whale, zigzag-ging here and there, "smelling" for whales, the Mary Blount drew at last into those dreaded and dreadful seas. Of the ship's company, those who were not forthwith seasick and sick of the sea could have been counted on the firegest of one hand—Capseasick and sick of the sea could have been counted on the fingers of one hand—Captain Haithway, because there is no prevention like responsibility, Shattuck, Crandle and, oddly enough, the boy Bowers.

Crandle had taken the education of the last named in hand and at the same time his own. For years the owner of a Bow-

ditch's Navigator, taken over for a bad debt, he had never so much as dipped into it. One day he thundered at Bowers: "Have you read that Bowditch yet?"

This was upon a calm and sunny day of

idling.
"I can't make head nor tail of it. And I don't see no use in it."
"Fetch the book."

Bowers fetched it.

"Now, then," said Crandle, "do you know where we be?"

"Aboard the Mary Blount."

"Whereaboutsaboard the Mary Blount?"

"Why is to forward of the transless."

"Why—jest forward o' the try-works."
Crandle rolled his agate eyes heavenward, asking, and receiving, patience.
"In what part of the ocean?"
"I dunno."
Crandle south his poice.

"I dunno."
Crandle sank his voice.
"Now I wouldn't know if the captain hadn't told me. Now this here book tells a seaman how to tell where he is, how to locate where he wants to get, how to point for it and how to get there."
"But the captain knows all that."
"So he does," said Crandle, again imploring heaven for some quality which was not his by nature. "So he does; so does Mr. Tuttle—and who else? Not a living soul on this ship, none o' the mates, none o' the boatheaders, boatsteerer or foremast hands, boatheaders, boatsteerer or foremast hands, and unless you and I study this here Bowditch and get help on the knotty parts nobody else ever will know. This book tells everything that's known about the sea and about shins." about ships.

"Does it tell why a ship is always spoken of as 'she'?"
"It does," said Crandle; "a ship is a woman because her rigging costs more than her hull. But that don't help us to find out where we are."

"It looks just about the same as where we was yesterday." "But the charts might tell us that where we are now isn't two miles from a hungry reef lookin' for a growin' boy. Suppose something happened to Captain Haithway? Suppose he got bit in two by a whale? Sup-pose then Mr. Tuttle dies o' that pain in the side he's always complainin' of? Who'd I tell you, when I thinks of the short lease a seaman takes on life from the Almighty it scares me. Do you want to be a cabin boy all your life? Do I want to die a boatsteerer that has risen from before the mast? No, sir, I don't. Now, then, we'll read this here book together. Two minds is better than one. And you just put this in your heart. You say to yourself: 'If there's anything that can be understood I can understand it.'"

Mr. Tuttle, walking as if walking hurt, his face pale and harassed, drew near and looked over the shoulders of the studious pair.

"Learning navigation? That's right. If I can help any I'll be glad to—glad to! There are never enough navigators on a ship by half. You never can tell what might happen. And when your chance comes you want to be ready for it. Look at Captain Haithway, rising in one voyage, by merit, by application, and by a series of unforeseeable accidents and sicknesses from cabin boy to first mate—on his first from cabin boy to first mate-on his first

voyage!"
"With all doo respects, Mr. Tuttle,"
said Crandle, "how is it that you never
came to be master, stopped at the top o'

came to be master, stopped at the top o'
the ladder, you may say, and never climbed
on into the house?"

"Why, it's well known," said Mr. Tuttle;
"but if you don't happen to know I'll tell
you—for the good of that boy's soul. I was
first mate at twenty-three years of age.
One night when you would least have expected it to come, the captain being ashore
and we safe in a calm harbor, a hurricane
came, blown in from the heaven knows
where. The work of savin' the ship fell to
the second mate—"

the second mate ——"
"But you was aboard, Mr. Tuttle?" "But you was aboard, Mr. Tuttle?"

"Yes, my man, to be sure I was. I was blind drunk in my stateroom. Since that time," he went on solemnly, "I have never so much as wet my lips with liquor. But for all that no shipowner has ever cared to trust me with a ship. And quite right too!"

Mr. Tuttle turned away with an abruptness which brought his hand to his injured side, bit his lips and walked aft.

SHE was a picture in the great blue sea-cloak which the men had made for her. And she could never quite look her fill at the exquisitely scrimshawed buttons or the droll effective embroideries. And the cloak was voluminous, and kept her very warm and dry. She looked like a child masquer-

and dry. She looked like a child masquer-ading as a woman, and indeed she was. Crandle, who in his reform, when sea duties permitted, was much occupied with thinking, used to watch her by the hour from his sheltered place against the try-works. But it was from under bent brows that he wotched so that to a grand oh that he watched, so that to a casual ob-server it must have appeared that he was intent upon his knitting.

intent upon his knitting.

It was pleasant to see the great, savagebearded seaman with the twisted and
flattened nose engaged in so prosaic and
innocent a diversion. He used, with a steady,
swift clicking like that of a clock, a long and
thick pair of ivory needles, headed by buttons of blackest ebony, into the top of each
of which had been set a little sperm whale
filed from mother-of-pearl. The yarns, blue
and white, steadily came out of a sewing
bar, a miraculous matting work of lines bag, a miraculous matting work of linen fishline, while the finished product was ever partially hidden by the cavernous palms of his hands.

These hands, rough, thick, hairy, cracked, tarred and able, looked to be very dirty in-deed, but the knitted yarns that came from their swift and sure handling were as clean as the day they were spun.

as the day they were spun.

If the men asked him what he was making he gave them elusive replies. "It's a curtain to hang over the sun." They had not seen the sun for a week. "It's gags to put in the mouths of them as asks too many questions." "A nest for flyin' fishes." "A net to catch suckers."

But for all his watching of Mrs. Haithway, his persistent knitting and the thou-

way, his persistent knitting and the thou-sand and one calls of his profession, he did not neglect Bowers and the Bowditch. Bowers was with him so much that he must have known what the long ivory needles were making. Indeed, perhaps in emula-tion of his idol, he had begun a slow and

cumbersome work of knitting of his own.
The book might lie between them, kept open by weights. And with constant reference thereto they spoke in voices containing already glimmerings of understanding of sines and cosines, of fixed stars and false horizons. The whole ship's company took horizons. The whole ship's company toos an interest in their progress. Mr. Tuttle, who grew paler and graver day by day, took a kind of feverish pleasure in answering questions and explaining difficulties. Captain Halthway loaned them his spare sextant, and worked over it with them until it was in perfect adjustment. The cook til it was in perfect adjustment. The cook of all people, presented them with a ledge.

all blank except for the fly leaf upon which some friend had written his name for him, and with a patent pencil which in his hands, as he naively put it, would do almost any-

thing except write.

Those doubts and mysteries of adolescence which had so troubled Bowers, under the earlier spells of Crandle's teaching, had by the same teacher in his reformed mood been dissipated and laughed to scorn. Without directly taking back anything that he had ever said to the boy, the strong man was able to throw over those same sayings a new light.

The God of the Bible and of the preachers

still met with his contempt, for he denied stoutly that God was God. "It's as if a man who didn't know how to add or substract was to write a trigonomity," he said, "and pass it off on men more ignorant as hisself for genuine." But he affirmed Christ. "Maybe He was God," he said, "and maybe He weren't. But you said, "and maybe He weren't. But you never heard a strong man sneer at him and you never will. As for me, I don't sneer at God, I only sneer at the men who are so bumptious they think they can explain Him and boss Him. Here, let me show you." He took the boy's rude knitting, picked up the lost stitches with wonderful deftness and expedition and returned it to him. "Try to get the feel of it in your fingers, same as a girl plays love music on the personne."

same as a girl plays love music on the per-anna without havin' to take her eyes off her beau."

"Speakin' o' love," began Bowers,
"Well?" said Crandle, his agate eyes roving toward Mrs. Haithway, who had just emerged from the cabin on her husband's arm.

"Was you ever in love, Crandle—hard and fast, I mean?" "Yes," said Crandle curtly.

There was a long silence.
"I often wonder," said Bowers at length,
"what bein' in love is really like. One man

says one thing; one man says another."

"It's like nothing," said Crandle, "that any man has ever said or ever will say, so what's the use o' talkin'? Some day you'll think you're in love, you'll think all the things you ever heard men, aye, and women say—well, you laugh and go about your business, even if it hurts. But another day you'll know you're in love."

you'll know you're in love."
"And then, I suppose," said Bowers, "you have to go about your business just the

"No," said Crandle, "then you have to do your duty, even if it kills you—and there's the captain's lady callin' me." He stuffed needles and knitting into his sewing bag, and rolled swiftly aft on his strong short legs. He stood looking down into the bright eyes that peered up at him from the deep hood of the great sea cloak.
"Crandle," she said, "I'm just dying to

know what you're all the time knitting, so I just had to ask."

"Oh, sometimes one thing," he said, "sometimes another."

"But right now, what are you on now?"

He covered the lower part of his face with one hand and stood for a moment, reflecting. Then withdrawing the hand and disclosing a smile of almost bewildering gentleness:
"Why," said he, "I'm knitting a blueand-white jacket for a baby."

It is a shock to any woman to learn that her first and greatest secret is common knowledge; but Mrs. Haithway's brave eyes never fell before the boatsteerer's.

"How good you are at heart, Crandle," she said, "and how kind and thoughtful. Is it for my baby?"

Is it for my baby?"
"For yours," he said.
"Crandle?"

"Ma'am?"

"I love to think that you are knitting things for my baby. I'd love to think that sometimes you are praying for me. A

woman—at sea—no other woman—only men—she—she has her little fears, her silly little panies, Crandle."

"When it's my watch below," said Crandle, "and sleep gets me, so as I don't know what's going on in the world, then

and only then I stop praying to God that all will be well with you."

After a moment more, with no word spoken, be turned upon his heel and went back to his place against the try-works.

ACROSS the top of the ledger in which he was keeping the log of the voyage, Mr. Tuttle wrote at this time in large red

Outward bound and still off Cape Horn.

Then, in black ink, the date and the following entry:

Begins with gale still blowing from the south-west, mized with flurries of sleet and snow. Edmonton, a boatsteerer, died of gangrene.

Then Mr. Tuttle drew in the margin a black coffin like this: and then he went on deck

to help them commit the body of Edmonton to the

deep.
Two weeks later the Mary Blount staggered out of the mists and gales and began to nose about for whale in the pleasant pastures of the South Pacific. Here she met presently with the B. D. Morgan, out of New Bedford, and now homeward bound with all her casks full and a fine lump of

ambergris under lock and key.

The two ships gammed for half a day, the officers and men exchanging visits for talk, news, play and trade. Captain Haithway wrote some letters for the Morgan to carry home; and received in exchange a letter from the captain of the Morgan to a Miss Smith in Honolulu. United States newspapers, months stale, were exchanged for equally stale copies of the Seaman's Friend, a highly moral sheet published in the Sandwich Islands. Crandle, who was made much of aboard the Morgan because of his dark and interesting record, returned from his visit the proud possessor of an oblong basket, woven in many colors from island grasses

This curiosity cost the wicked man several pounds of excellent chewing tobacco and a gauntlet of laughter. "He wants it to pick flowers in," they said. "He's going to give it to Pharaoh's daughter to find in the bullrushes." This shot in the dark was so close to the mark that Crandle scowled and the laughter stopped.

If the gamming of the ships was more profitable for some than for others, it was most profitable of all to Bowers. He went aboard the Morgan, a blushing, overgrown

hobbledehoy, and returned a young man inspired with hope and ambition, with a jaw for once tightly closed.

"Why," he told Crandle, "the Morgan's second mate, Mr. Coffin, went out as cabin boy. He took to Bowditch same as you and me, and when his chance come, there he was. And I told him how far we'd got, and he said he hadn't got near as far after studyin' the same length o' time. And he said it would come to us all at once like it done to him. He said he was like a man lookin' for a button on the floor of a big dark room—all his gropings was at hazard and no account, till all of a sudden his hand closed on the button. And now——" Bowers stammered in his effort to find an overwhelming proof of his new friend's at-tainments. "And now he don't think no tainments. "And now he don't think no more of a false horizon than you and me thinks of bean soup. What's the basket

for?"
"Why," said Crandle, "I got some nice
bits of wood put away—nara and ebony
and such like—and I'm a-going to make a
stand for this here basket, so's it'll hang fore and aft and amidships, like the binnacle lamps, and always keep an even keel no matter how the seas run. Then I'm going to take up contribuotions of hair from the men; soon as any one gets his hair cut I get the clippin's. When I gets enough I boils 'em in a kettle and skims off anything that comes to the top, anything in the animal or vegetable kingdoms, and then I takes the hair and dries it, and sprinkles it with orris-root and powder o' cedar, and then I makes it into a little mattress to fit snug into the bottom of the basket. Then I makes up a little set of bedclothes and a piller to match. And a bedspread outer that silk handkerchief I showed you one

day; and ——"
"Couldn't I do nothing to help?"
"With them butter-fingers of yours?
But, yes! When I boils the hair you can stand by to do the skimmin' -

At this moment the speaker was interrupted by a great, loud, clear musical shout

from aloft. Blowo-ows-Ah-Blo-o-ows.

True to her reputation, the Mary Blount true to her reputation, the mary Blount had smelt out a sperm whale, and far off to leeward in the dancing, dazzling sunshine her lookout could see it, loafing, spouting and inviting its soul, an island of black watered-silk upon the blue.

"Boy," said Crandle, "stow that basket in my chest. And fetch me some pitch to the country of t

rub on my hands. Something tells me that the first chance to put an iron in that there fish will be mine."

"The Girard Smile" As conceived by W. B. King

To enjoy the good things of life and not pay too dearly for them is the general human desire. We make our cigars so fragrant in aroma, so full flavored in taste, that they yield a maximum of pleasure; yet the blend is so mild that they are easy on nerves.

# GIRARD

are not merely good cigars; their blend is unique and exclusive, and you will have to try them to appreciate them.

Girard Cigars are made in 14 sizes from 3 for a quarter to 20c. straight.

## TIRE MILEAGE CONTEST

FOR EMPLOYED CHAUFFEURS

# \$5,000 in PRIZES

WE invite our friends among car owners to encourage their chauffeurs to enter the Second Ajax Tire Mileage Contest, now in progress. The direct benefits accruing therefrom are more careful driving, proper care and consideration of tires, their proper inflation, greatly increased tire mileage life and lessened motoring cost.

The value to car owners of the recently concluded Ajax contest was fully demonstrated in the award of first prize to J. F. Gibney for driving an Ajax tire a distance of 16,783 miles on a Locomobile touring car; the average of 10,323 miles per tire made by the first 30 capital prize winners, and the average of 6,906 miles per Ajax tire made by the total of 208 prize winners.

For all information regarding the second contest, now in progress, address the "Contest Department." Investigate Ajax Tires, for they are better tires!

"While others are claiming Quality we are guaranteeing it."

May secure without expense a course at Yale, Vassar or any other college or university, at the New England Conservatory of Music or at any other musical college or conservatory, at any business college, correspondence school, law school, medical college-in fact, at any educational institution in the country. More than a thousand young people have already earned scholarships largely during their summer vacations. Your boy or girl can do as well as they. Write for details.

BOX 527, EDUCATIONAL DIVISION

THE SATURDAY EVENING POST, PHILADELPHIA, PENNSYLVANIA

He turned and faced the captain. The latter's face was bright with ill-concealed excitement

"Big bull," he said; "ninety barrels if he's

Crandle was rubbing his great rough palms together and a kind of shiver went through him.

"Not nervous, Crandle, I hope."
"No, sir. But it's the first chance I've had to show anything since you and her gave me a lift in the world, and it seems as if I couldn't wait to get at him, sir."
Captain Haithway laughed like a boy.

"You've whaled enough to know how much hurry there is! But we'll lower the boats presently—presently." And meanwhile, without a thought, they

were parting company with the Morgan. Every pair of eyes aboard the Mary Blount was peeled for a sight of the whale, and even Crandle's heart was stirring with those savage instincts of the chase that are more potent in man than friendship or greed or even love.

"Flukes!" he bellowed. "There goes

(TO BE CONCLUDED)

#### THE DANCING CARNIVAL

(Continued from Page 13)

"Haven't any—I'm nonunion," said Lionel, "Move, will you? I got a lot to do incide."

"Well, we ain't workin' with no scab— see? So if you can't flash your T. M. A. card, this show's out o' luck, kid. Come on boys! Let the scab set the stage!

A transfer company's wagon blocked the A transfer company's wagon blocked the alley as the striking stage crew left it, and Lionel, deliberating on the steps, heard the word scab repeated loudly. Then:

"Drop the baggage off right there, Andy, an' come on! You'll be in trouble with the Teamsters' Union if you don't."

The hump of a trupk on the payed side.

The bump of a trunk on the paved side-walk followed this threat.

"Here, you deliver that baggage at the door or we'll sue your comp'ny!" yelled Lionel, boldly dashing forth; but the trunks came hurtling down, for Walden was

strongly union.

The stage crew walked off and the two transfer men stolidly unloaded, with Lionel violently impugning their ancestry. When the wagon was emptied they drove away, still silent under his taunts. The last trunk was Goldie's and the sight of it soothed Lionel. He dragged it through the stage door, then groped for the switchboard as there was no light. He located dressing rooms by the musty odors of grease-paint, and a trail of fresh cigarette smoke led to the switchboard. He pulled out plugs by the light of a match and succeeded in illuminat-

ing the auditorium.

When he had the dressing rooms lighted he returned to the trunks in the alley and, for Goldie's sake, brought in her partner's trunk. Bologna's he left; but as Daisy was always kind he lugged hers to room number three. There seemed to be only himself in the theater—until he went to the front, discovering a youth yawning in the box office.

The youth said he could use the phone if he wanted to; so Lionel called the hotel selected for the company by the advance man. Manager Josephs had registered and

man. Manager Josephs had registered and gone out. Every one but Fanny Willetts was out, and Fanny said:
"We're up in Charlie Benjamin's room an' Gene's puttin' hot towels on him while I'm fixin' the medicine! Sick—my dear, he et a canned crab in Newtown an' he like to 'a' died before we got him to bed! Oh, he can't direct that orchestra tonight, Lionel, he's all in: an' we'll have to use the house he's all in; an' we'll have to use the house leader for this once. I dunno where any one is! Goo'-by!"

Lionel carried in set pieces and trunks, and investigated the resources of the property room. It was seven-thirty. A non-union crew must be hired and the house leader informed that he must direct in place of the ailing Benjamin. The box-office youth declared that all he knew was that his father, the house manager, was in Fall River and had told him to see that companies got no more than their just percentage, and to take his clicker to the gallery door when the tickets were all sold. He did not know any sceneshifters or electricians did not know why every one was late. As Lionel fumed Vera Kelly entered the stage door, asking what was the matter. "They never had anything over seventy-

five-cent vod'ville over this circuit before, an' we blow in an' ask 'em two a throwan' the stagehands have struck 'cause I ain't union—an' Benjamin's poisoned— ain't that enough?" he groaned. "Not a soul to help an' this stage to be set—huh?"

"I say, gimme a hammer an' tell me what to do," said Vera. "Nobody's killed yet." Lionel was tacking scenery to battens and he accepted Vera's help apathetically. He reflected that, unless the performance could be given as usual, his enemies would have such cause to reproach him that Goldie might turn against him too. When Vera,

snatching a square of sylvan dell, tacked it

"Now here; things can't be hashed up like that! Are you blind?" She untacked, meticulously matching a painted tree to the half he had just put up. Weak tootles from the musicians' room

under the stage sent Lionel flying there. Then the tootles ceased, a faint cry of Scab! sounded from the alley, feet tramped out of the stage door, and Lionel roared:

"You better beat it or I'll punch him harder!"

"Oh, Lionel! What'd they do? What'd you do? Are you hurt?" screamed Vera; and Lionel, breathing like a winded dog. replied:
"I hit their cursed leader in the eye!

Sympathy strike now on. We got no music, no crew, no nothin'—an' I got to watch the trunks so they don't wreck 'em! That'll be

the next thing."

With a stagebrace he was menacing three burly strikers when the Happy Harmonists came running to his aid. Gene and Fanny Willetts, Inez Kelly and little George Graff. scurried across the street, and the six Different Dancers tempestuously detrained from a passing trolley car. All were willing to make up for having dallied by fighting to the death if necessary, and the strikers had retreated when Vera came out, bearing a

fire-ax.

"I'm comin', Lionel! I got an ax!" she shouted; but her sister Inez caught her arm, exclaiming:

"Vera, you're makin' a fool of yourself about him! He's a nut over Goldie and you would be realize it—and yet you don't. ought to realize it—and yet you don't.
You'll never get him. Here she is now and
you'll see where you get off at!"
Goldie was demanding the manager—
house manager, then; or Johnny, or the
electrician. Something must be done in-

electrician. Something must be done in-stantly! Andshetartly asked Gene Willetts,

stantly! And she tartly asked Gene Willetts, the stage manager, why he was not doing it.

"Here's Mr. Lamotte doin' ten men's work an' fightin' strikers as well, an' others merely stall round an' look wise!" she said excitedly. "Mr. Willetts, you get a gait on—d'you hear me?"

"Gene don't have to take no orders from you, Goldie Dailey," said Fanny Willetts. "Don'tan'won't—orwe'll close right here!"

"Lionel, I'm dependin' on you, as people behave like perfect rummies!" said Goldie hysterically. "I own a piece of this show, an' the house is half full; an' we don't knock our tour by givin' the money back!"

"I can set the stage an' work the lights—

knock our tour by givin' the money back!"

"I can set the stage an' work the lights—
we can go without the spot for once," said
Lionel, his heart leaping as his lady voiced
her dependence on him; but Goldie cried:

"We gotta have a spot! I can't work
without one! And the orchestra — Oh,
heavens, what's to be done?"

"I'll chase a boy over for Benjamin's
address book. He must know some musicians here that ain't in a union," said
Willetts. "Buck up, Goldie!"

"Her insultin' you an' you stand for it!"

"Her insultin' you an' you stand for it!" said Fanny Willetts; whereat her husband

said briefly:
"Shut up! Goldie's all right."

"I can quiet 'em with a piano overture," proffered Lionel; and Goldie said:

Lionel dear, I can't thank you here-it ain't the place; but when we're alone

She looked severely at Vera, who slunk away to dress. If Lionel could look at Goldie as he had, Vera thought that Goldie must respond by gladly giving him het heart. Who could resist him?

The poor girl left raw splashes of red where the color should have been softly blended and tears made her rouge paw use less. Lionel's black eyes were in her glass instead of her own, which were as black. If she owned mink coats and jewels, bright

yellow hair and fine gowns, would he like her then? It was not fair for Goldie to lure him with her pansy eyes. For the first time Vera wished herself a blonde. "You keep on an' you'll be sick," warned Inez, putting the small Graff to bed in the tray of her trunk; but Vera said she did not care if she was—no one else cared either

tray of her trunk; but Vera said she did not care if she was—no one else cared, either.
"I'd catch myself moonin' over that kid!" said Inez angrily.
"He's older'n I am," said Vera; and she wondered why he had told her of the play he meant to write, and the great part in it that her personality would fit, and the dinners they would have, and then forgotten her!

She had stopped exchanging letters with a rising young hoop roller, and in her mind she began to mother Lionel—to fret if his delicate throat was uncovered, and to plan for another season, when they would travel as a team, domestic and professional. She would take her Persian rug, a velours table-cover, some dishes and all her photographs

out of storage—even her encyclopedia.

One could make the dreariest one-nightstand room homelike in a few minutes. She stand from homelike in a few minutes. She would cook a hot little supper for him after the show and stitch silk shirts for him that should be as fine as Johnny Trippit's. Did he not know how headliners were — how they forgot as easily as he had? She clenched the hands, so ready to minister to Lionel, and tried to wish that Goldie would not flout him and cause him suffering.

tried to wish that Goldie would not flout him and cause him suffering.

Because Johnny and the manager had come and urged her to dress while they settled and improved the situation, Goldie was in her room. She was thinking of Lionel. How versatile he was! Johnny had actually admitted that the stage was properly set, and that the dozen labors performed by Lionel were excellently completed. A male friend of a Different Dancer had viewed Lionel daring the strikers to

pleted. A male friend of a Different Dancer had viewed Lionel daring the strikers to combat. He was a hero—and all for her!

"Say, dearie, I had 'em fry a couple of those chickens, so's we can have 'em cold after," said Daisy, popping in. She wore a frizzy brown wig and a green-and-white chiffon dancing costume.

"Oh, goody!" said Goldie, powdering her shoulders. "It's so seldom they're really nice—an' you could actually eat the legs of the one I had for dinner."

"Charlie didn't know of any pianists here. We might have to cut this date," said Daisy; and then she cried; "Hold on—she's not ready! Who is it?"

"Lemme in—I got to see her!" said the voice of Bologna.

voice of Bologna.

Goldie whisked a robe about herself as he entered. He was pale and his small eyes blinked, which with him was a sign of inward turmoil. "It's private," he said, blinking faster.

"It's private," he said, blinking faster.
"Daisy an' me got no secrets—for mercy's sake, speak!" said Goldie. "Oh, Fred, what is it? My grief, that woman pirate ain't put our act on? My, I'm shakin'!"
"Goldie," said the juggler hoarsely, "prepare to git a wallop; an' if you hadn't nussed me when I had the pneumony I—but can that! I'm Johnny's pal, but I won't weaken on you—well, will you kin'ly smell these here? John found the woman, but she won't tell where her partner is. They're Bolton an' Bolton. Smell these here."

They're Bolton an' Bolton. Smell these here."

"My letter!" gasped Goldie. Then she snatched at the mauve sheets in his fingers and Bologna allowed her to take them. Daisy smelled curiously. "Both the same, so far as I can tell," said she.

"Yup! They are," said Bologna heavily. "Here's the notes on the snowshoe dance, picked up in the other theater. Here's a note wrote to Goldie by Mr. L. Lamotte on a double sheet turned inside out—an' he didn't notice that the inside's a letter."

The back of Lionel's message was covered

The back of Lionel's message was covered with writing in a slanting, feminine hand. With growing horror, Goldie read it aloud:

"Dear Mr. Smith: We have a swell new dancing act for the Australian-Oriental time, and think we ought to get two hundred, as my husband has an original dance on snowshoes that is a big feature. We open with full stage-a winter set-and carry our own drop, and close in one with him doing a buck on his hands, while I ——"

"She's fainting! Water-but don't spoil her make-up!" cried Daisy; but Goldie eluded Bologna's arm, declaring: "No, I'm not! Listen! Do you figger that Lionel joined merely to study our methods an' that the party in this is his wife?"

Bologna nodded.

#### THE SUMMER'S SILK SHIRT OPPORTUNITY

Smart Made-to-Measure \$ 1 150 Shirts for Men and Women

AVE you ever heard of three smart, high grade, washable silk shirts being made to individual measurement for \$10.50? Fifth Avenue custom shirt-makers charge from \$8.00 to \$15.00 for a single garment.

#### Our Made-to-Measure Silk Shirts

are wonderfully good and exceptionally smart, correctly styled, perfect fitting and long-wearing. The patterns are very new and exclusive.

You may select your silks from our "How to Order by Mail" booklet, in which they are shown in a wide variety of beautiful effects. We have yet to learn of a silk shirt value in America which commerce with ours either in which compares with ours either in quality of silk, in style, finish or fit.

Write at once for illustrated catalog which also girst full directions for ordering. Convince, yearself that by purchasing shirts, palaran, nicht shorts and athletic underweut direct from the designers and makers, you accountlish not only a remarkable saving, but secure a wooderful value. Get your order in early and enjoy some of these garments during the hot summer mostels.

# 75% SAVED IN PENCIL COST!

Striking testimony to the economy and incomparable quality of L.& C. Hardtmuth's

# 'KOH-I-NOOR' PENCILS

London, January 22, 1914. I have noticed an advertisement of yours wherein you relate the experience of a user of "Koh-i-noor" Pencils who found one pencil to last seven years. I do not doubt it. Had my own experience not included the "Koh-inoor" I tell you frankly I should have doubted it. I use the 4 H. grade because I draft continually on very course paper. I used to get pencils at half the price, but they only lasted a week, and frequently fell short of that. The "Koh-i-noor" lasts me two months. Now it is a simple matter of arithmetic to show that your make yields me at least 400 per cent., and very probably 500 per cent., to say nothing about the saving of time in sharpen-ing the pencil. Further, I experience a pleas-ure in the velvety smoothness of the lead, which is one of those little luxuries that add to the chances of good work. I get my pen-cils from the Lechertier Barbe, of Jermyn Street, S.W., but my sole object in writing you this is to endorse what the architect wrote you, and to say that "Koh-i-noor" pencils-provided a man has the common gumption to use the proper grade for his work-are infinitely cheaper than "cheap" pencils and vastly superior to work with. And another virtue—if one drops a "Koh-inoor" to the floor, and that point downwards, as, of course, they always seem to do-they

You can make any use you like of this. My only desire is to make a good article known, and to suppress the rubbish.

do not break.

NOTE!-The paper used by Mr. England is of a very rough nature, and tests the pencils

in the severest possible manner. In 17 Degrees and 2 of Copying.

Supplied by high-class Stationers, &c., everywhere. Illustrated list from

under a towel.

"We've tried every place and they're going to return the admissions," said Lionel sadly. "Can't give a show without some music." music

"We're goin' to have music, Lionel Lamotte," said Goldie, and her tone was whiplike. To Bologna she continued: "Run an' tell Mr. Josephs that Mr. Lamotte says he'll play the whole show on the piano, an'

not to give back a single bone!"

"Why, Goldie, I can't! I don't know the music well enough," faltered Lionel.

Daisy had slipped out. She reappeared and with much resolution displayed a revolver like Goldie's. Bologna was gone. Goldierevealed her revolver, and she pointed it attaight at Lionel as she said still smiling. it straight at Lionel as she said, still smiling:

"Study for drama in the 'lonely spaces,' will I? Australia an' the Orient, maybe? I admit I was fooled—any one is if they be-lieve in parties an' ain't expectin' 'em to turn out a perfect wretch! An' you was goin' to end by bustin' my show!" "Goldie, hear me! Goldie!" cried Lionel; but Daisy and Goldie shouted in unison: "Keen still!"

"Keep still!" Lionel shook, and it was scarcely a proof of cowardice, with two carelessly handled automatics aimed at him.

You'll play an overture, an' then you'll

Tou it play an overture, an' then you'n play the acts an' the revue; an' you got Trippit an' Dailey to reckon with when you're done!" he was promised.

And, as if hurt, amazed and rendered abject by events, Lionel was led out by Bologna, who reported that Josephsthanked Mr. Lamotte. Then the juggler borrowed Dailey's revolute and commanded.

Daisy's revolver and commanded:
"Hike! An' if you play any of my music
wrong I'll bounce a weight on your bean!"
Fifteen minutes after the advertised hour an impatient audience observed a thin, dark youth in evening clothes come out of the slide by the piano. He commenced a brilliant medley, in which Mozart and the countless Von Tilzers, Wagner and Berlin,

Chopin, and Lionel's own works were recklessly ragged. The audience liked it, but their approbation did not make the artist

The Sisters Kelly opened the bill, and Vera wondered why Goldie and Daisy were in opposite entrances, looking so strangely at Lionel. Inex became enraged when Lionel did not repeat the vamp of their second song. but Vera yearned to jump down and help him puzzle out the lead sheets. How could they expect him to play a hard show like this at a minute's notice? She was doing the Kelly Walk when she heard him say: "Find out whether those guns are loaded!"

loaded!

Vera could not answer until she was again in the center of the stage. Then she queried as he glanced up because the dance had changed time:

"Yes, guns! Find out!" he said, almost in a whisper.

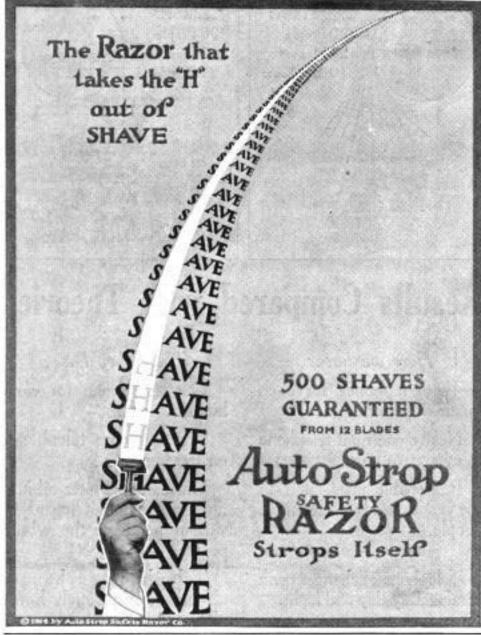

Inez did not hear him. She sent a hasty look at Daisy, whereat Daisy instantly and deceitfully smiled. And Goldie smiled when Vera danced toward the other entrance.

Was it Johnny who had a gun? "Oh, who'd you mean?" she she quavered; and under cover of the music Lionel said: "Look in the upper box an' see is that

Sam Devine—last season's d'rector for Smoke's Minstrels."

The act was finished before she could be certain. Then she nocded; and Lionel nodded back so significantly that Vera was sure Sam Devine had the guns and was seeking Lionel's blood! And why—why should Sam Devine want it?

"Your bit's got to be cut, with him play-in'," said Johnny, finding Goldie still on guard. The revolver was concealed under her white satin coat.

### When the Flies Come—

use of Tanglefoot, the most effective fly
destroyer yet devised.

In 30 years nothing has proved so sure, so
cleanly, so safe and easy to use.

When a fly lights on Tanglefoot it is coated
over with a varnish that destroys the germs as
well as the fly well as the fly.

Don't Risk Every summer many fatalities are reported from their use. Poisons do not kill the germs on the fly. Poisoned flies drop into your food, the baby's milk or are ground

into the carpets and rugs.

Fly trace are so ununitary and disqueting to care for, our grandmothers discarded them a generation ago.

foot and place it under the bed. It will catch the fleas,

At All Grocers Tangleloot contains more slicky compound; the no-name kinds sold merely as fly-paper sticky fly-paper at the same price as agle/out. Then why not get the best when it costs no more, except to remember to order TANGLEFOOT?

MADE ONLY BY

THE O. & W. THUM CO., Grand Rapids, Mich.

A little gandier will quickly remore Tangle/out from clutter or furnitors. (2)

"I'm glad it has," said Goldie through her little white teeth; and he was so gratified

that he remarked:

"I'll give a feed after we're done—an'
ast Lamotte. He's doin' swell!"

The Happy Harmonists had four minutes without music—sufficient rest to allow
Lionel one cigarette. He signaled Daisy,
who motioned assent. Bologna met him as

who motioned assent. Bologna met him as he emerged from the slide.

"Say! I miss three balls to work up ex-citement, an' I got to be ketched with a crash for each of 'em. An' if I ain't—be-ware!" growled the juggler.

"So you knocked me with her, did you?" exclaimed Lionel desperately. "You're a fine—"

fine ——"
"Fred—time!" came Daisy's shrill voice,
and Bologna herded Lionel back to the slide.

"Fred—time!" came Daisy's shrill voice, and Bologna herded Lionel back to the slide. The pianist had to lay half of his body on the keys to make a satisfactory crash when the Terpsichorean Juggler, in his fleshings and gilt boots, missed a few burnished cannonballs, then caught the rest on the back of a hairy neck, rolling them up and down powerful arms. Lionel's wrists ached from the unusual strain of continual playing; but when Goldie was on for the snowshoe dance he livened. She did a startling split on the big shoes, and while she faced him he pleaded, playing meanwhile:

"Goldie, what you accusin' me of?"

"Traitor!" hissed Goldie, smilling for the front rows as she rose expertly. "I'd rather be dead than dance that pantomime with you again! I was only connin' you along about the drama—never meant one word!"

Lionel, stricken, missed a cue. While Trippit and Dailey took their bows an usher—a non-union man discovered by Manager Losephs, who was a persting the special property of the special prop

usher-a non-union man discovered by Manusher—a non-union man discovered by Man-ager Josephs, who was operating the spot-light in the gallery—informed Lionel that a Miss Kelly had seen the gentleman in the box, and he had no guns.

"She got it mixed," said Lionel. "Tell her—no, tell him to take this front-row seat that's empty, behind me."

The revue was going on when a stout young fellow quietly occupied an end seat and, leaning over the rail toward the piano, said:

and, leaning over the rail toward the plano, said:

"Hello, Li! What's comin' off, any way?"
Lionel missed another cue, then played two beats ahead for Johnny's buck with the comedy policeman. Goldie felt for the weapon hidden in her gown and Daisy determined to support her friend to any extent.

"That fat man's playin' for Lionel!" said Inez Kelly at the table in Goldie's rear.
Lionel was gone!

Lionel was gone!

Lionel was gone!

Goldie sat at a table placed so that the whole house could see her. It was her inalienable privilege as a headliner to be there. And Daisy, as the show's added attraction, was nearly as prominent. Neither of them could leave the stage; and if they did not apprehend Lionel he could escape. And what would Johnny say to Goldie for keeping the secret that Lionel was that loathsome thing—a chooser, with a wife of the same acquisitive nature? They might get away to Australia with Trippit and Dailey's act before they could be caught!

Bologna was doing comedy with Johnny and Billy Graff, and the comedy was to be prolonged because the violin number was out; so he was helpless too. The substitute began the pantomime's music—he did not understand that it had been cut! Willetts, the stage manager, was wigwagging to him,

the stage manager, was wigwagging to him, and yet the man, with a little smile, calmly

and yet the man, with a little smile, calmly repeated the introduction.

"Get out on that stage an' dance or I'll crab this show so you'll cancel the rest of the territory," said Lionel in the entrance back of Goldie. "We'll dance now if we never do again!"

"Not with you—I'll shoot! See if I don't!" said Goldie, athrill. Even a manager would have feared to order a headliner. The music was insistent.

"Shoot nothin'! Get out there or I'll stop the piano an' put the whole works on the fritz!" said the ferocious Lionel in her pink ear.

Goldie plucked weakly at her dress, but she dared not attack a man who was so plainly ready to smirch the record of the first two-dollar vaudeville company in New England. She tried to call to Johnny and found him motioning her to hurry, apparently pleased that he did not have to im-

provise comedy for another fifteen minutes.
"I can't—I won't! My work'd just be rotten an' metallic!" she protested.
Lionel's big eyes glared and with a savage

push he sent her from her chair. Then Goldie danced, revolted at herself, at him, at everything, but still conscious that when one owned a percentage of a show, and was

a headliner, too, sacrifices must be made When the audience recognized their zealous when the audience recognized their zeasons
planist in the dancing violinist who so
energetically wooed the lovely blonde lady
they gave him noisy applause.

"Lemme go! Lemme go!" panted Goldie
as Lionel clutched her for their exit.

"Connin" me, were you?" he said hotly.

"An' then ready to shoot me besides!"

"Peccele like you's your mife oughts he

"People like you'n your wife oughts be shot!" choked Goldie as they waltzed up and down later, to which Lionel said.

and down inter, to which Lioner sain, astonished:

"Wife! What wife?"

The dance was too strenuous for further conversation. When they waltzed off locked in each other's arms Vera gave a moan. She understood that something was wrong between them, of course, but it looked to between them of course, but it looked to be at though a recognition had been effected. as though a reconciliation had been effected. This was a mistake.

This was a mistake.

The clasped ones unclasped and rushed out to take their earned plaudits, Sam Devine gayly played the balance of the show, Lionel sat moodily at a table as one of the stage guests and the drop fell while they all danced Good-Night Rag.

"Goldie, you got to explain that crack about a wife!" said Lionel, facing the company as the curtain thudded down.

"Chooser!" screamed Goldie, queenly despite perspiration. "I depise you for one—also with a choosin' wife—an' for lyin' about your old play!"

"I ain't married an' never was, an' I never chose nothin'. An'I can write a play, but it won't be for you!" cried Lionel.

"Pro'bly you never lamped this here before!" interposed Bologna.

"I won't send her any more," said Lionel.

'I won't send her any more," said Lionel.

"I won't send her any more," said Lionel. spurning his mauve note.

"But what's this all about?" demanded Johnny. "Me an' Fred found the woman who was stealin' our stuff, Goldie. Lamotte ain't guilty."

"That there woman's this guy's wife—Bolton an' Bolton," said Bologna. "He's Bolton!"

Bolton!"

The company drew away from Lionel. Daisy warned her dancers from him as from a pestilence. Inez Kelly declared that it did not surprise her a bit, but Vera stepped briskly forward.

"Him Harry Bolton?" she said contemptuously. "I saw Harry sittin' in the window of the Noble Hotel here tonight. He's no more like Lionel than I am. An' if Goldie Dailey's been after Lionel with gurs. an' callin' him a chooser when he ain't, he Goldie Dailey's been after Lionel with guns, an' callin' him a chooser when he ain't, he ought to have the law on her; an' I say so, if she gets me canceled tomorrow—or tonight!"

"I—I truly beg his pardon," stammered Goldie. She looked appealingly at Johnny, who winked at her as he suggested:

"Let's all have that feed I was talkin' about—an' nix on the hard feelin's."

"Please! Please come, Lionel!" said Goldie. Her pansy eyes were very sweet, but Lionel would not see them.

but Lionel would not see them.
"I got a date with Miss Kelly," said he.
"We're goin' to talk over my play!"

#### Music en Route

NAT GOODWIN was sitting in the Lambs' Club one evening not long ago, when a friend who was in trade approached

and offered him a cigar.

"Nat," he explained, "this is a new cigar
we're just putting on the market. I wish. as a personal favor to me, you'd try it and give me your opinion of its merits. To in-troduce it generally we are making special premium offers. If you smoke five hundred of those cigars you get a silver-mounted safety razor. If you smoke a thousand you get a hand-sewed traveling kit. If you smoke ten thousand of them you get a baby grand piano."

baby grand piano."
Goodwin lit the gift cigar and puffed at it gingerly. Then he laid it aside.
"If I smoked ten thousand of those things," he said, "I wouldn't need a piano: I'd need a harp."

The crowd laughed. Only one man, an English actor, sat silent and unmoved. Presently he got up and moved away to a quiet corner, where he remained alone for

some time deep in thought. The next day "I say, Mr. Goodwin," he began with a chuckle, "that was a deuced clever thing you said last night—about those cigars mean—frightfully clever! I've been muling it over in my mind and I get your mesing. Of course, traveling about as you of a piano would be terribly in your way

#### idols of the King

(Continued from Page 20)

Or was she sunk? Oh, never mind!-A sailor drunk Is the useless kind; For Science has found that a gunner bright Who has quaffed three jigs of Missouri Light, When he stands prepared, his eye to the gun, Will see three foes when he should see one.

The consequence, Sire, Is extremely dire; Not only is the difficul-tee Of taking aim increased by three, But the man behind the gun, y'see, By viewing a triplicate ene-mee, Is three times as scared as he ought to be."

Cried King Wood-row,
"Sure, there's meat in the things you say."
"More meat than drink," quoth Jo straight-

way. But we should grieve! Just give me leave To write an Order to the Navy
And quick as Goliath struck by Davy—
Ere Friday next, the Thirteenth day—
I'll make the ocean so dry that—say!
'Twill make the Ancient Mariner croak
In the bridal train that ancient joke:

(Thirties the blink Time's on the blink.

And I don't think That water looks wet when you want a drink!""

Petition granted; So Sir Jo D. At once got busy to dry the sea And the wireless flashed from fleet to fleet-Gunboat, battleship, little mosqueet-The waves aginst, Abaft, forninst:

On Friday next, the Thirteenth inst., Every cocktail, every beer, Every wine with a label dear, Every rum with a cider chaser, Every patent-medicine bracer, Every brandy of apricots, Jersey lightning, vatted Scots, By the hour of noon must immejut be Poured, dumped, jettisoned into the sea."

#### III-FRIDAY THE THIRTEENTH

The Fleet, it lay a-rocking on the border of the ocean,

The Fleet, it lay a-rocking on the edge of Mexico,

When a wireless telegraphic came and interrupted traffic

With the message: "Chuck the lickerthem's me orders. Do it!-Jo."

Now the officers at trencher were a-drinking vintage French or

Something equally expensive—seven dol-lars to the quart—
Which the Navy always furnished to the men in buttons burnished,

Or equivalent in money to the men who "Don't care for't."

And the officers of warrant were a-quaffing many a torrent Of Château Yquem, or bumpers of heady

gold Chablis; And the sailors in their mess, sir, were quite

jovial, I confess, sir, From great swimming tubs of grog, sir, full of absinthe, rum and tea.

"Twas, in fact, the average scene, sir, in our gallant life marine, sir— As investigators tell us; and, of course,

they ought to know. And all patrons of the stage, sir, know that

sailors earn their wage, sir, By absorbing local color and avoiding H<sub>2</sub>O.

It was noon. Jo's message frantic fairly scorched the wide Atlantic. There was dread among the Dreadnoughts,

quaking knees in naval jeans; There was fright among the jolliers on destroyers, cruisers, colliers,

And a sort of sinking feeling went among

But the Admiral at his luncheon laid aside his husky truncheon, Sighed, saluted: "Grim is duty-yet I'll

do it if I die! Set the signal flags affutter on the smokestack

turret gutter! Fly the barometric signal—'Sudden change to extra dry'!"

And no sooner were these pennants seen by Uncle Samuel's tenants

Than that rabid sense of duty which the sailor cannot lose

fully equipped with 50 feet of cable, is \$10

UNITED SAFETY APPLIANCE CO., Inc., General Offices, Syracuse, New York

Started every Jacky of 'em-Heaven help 'em! Heaven love 'em-To the turrets and the portholes, bearing

booze and booze and booze.

Fell a splash of liquid thicker than Niagara flowing liquor-All along that line of battle such a gurgle,

such a spray!

Spurted lofty founts of sperrits from the conning towers and turrets Till Pa Neptune, rising upward, quaffed the sea and yelled: "Hooray!"

And they say, from so much calloused waste of stimulating ballast,

That the ships rose many feet, sir, up above

the water-line;
While the ships' hands made endeavor to
play up: "Farewell Forever!"
But the fishes warbled: "Welcome!" as they hiccuped through the brine.

Whales and dolphins, sharks and sculpins started in a greedy gulpin' And they acted most peculiar for a week

or even more; And near Newport's naval station was a temperance delegation

Who went swimming, tasted somethingand refused to come ashore!

But, in Washington, Josephus to the King smiled blandly: "Reef us! Now's the time to start a war, Sire, and our

tars'll do it right. That's my rule, Sire: Irritate 'em and you'll

quickly elevate 'em To the maximum efficiency—they're mad enough to fight."

IV-LAST-CHANCE CHANTEY, CHANTED BEFORE THE KING BY SIR HAM LEWIS, SOMETIME LAUREATE

Thus said the Lord of the Battleships and Admirals,

Speaking to the officers, all quaking in their shoes:

"Lo! the rules have passed away In the drought of Temperance Day. That our Party may be strengthened, shall I gather up the booze?"

Then up spake the tars of the battleship Connecticut:

"Plague upon the hurricane that blows us nought but dry! Now that war's begun between us,

Kill old Bacchus, murder Venus; And there's nothing but a hymn book now to make us fight and die."

Then said the stokers on the good old collier

Jupiter, Balancing their scuttles, which were former full of beer:

"We who warmed the engine thuds Dipped our beaks amid the suds— And the proper place for water's in the bathtub once a year."

Then up sang the ghosts of the heroes of antiquity: "We fought with Drake and Farragut; we

followed Nelson's log; Bullets broke our gallant bones As we stood by John Paul Jones Was it up to these commanders to deprive

us of our grog?" Loud roared the souls of the Spanish-Yankee

veterans: "Have a heart, Josephus! Kindly harken to our views:

When we thrashed 'em at Manila There was little sarsaparilla Drunk that night in celebration as a sub-stitute for booze."

Bright smiled the Lord of the Ships and

Admiralty, Sitting in the office of the fearless Raleigh "Though the logic's rather faint,

I am filing your complaint-And the next Administration may be kinder to the booze."

#### The Natural Inquiry

AS JOHN TENNANT, managing editor York Evening W the story, a battered and weary-looking prisoner faced a London magistrate.
"You are charged," said the magistrate,

"with being in a beastly state of intoxica-tion. What is your name?"
"My name is Angus Alan Fergus Mac-

answered the culprit with a thickened burr, "Who bought you your liquor?" de-

manded the magistrate.

# A dismal holiday or a bright one?

Are you planning to while away all of the golden hours this vacation? Thousands of bright, active young people, away from school or college, will idle away the summer simply because they have 'nothing particular' to do with it. The Saturday Evening Post has something very particular to suggest to you and something even more particular to offer you for doing it.

All of you can turn these weeks or months of idleness into shining dollars by accepting our invitation.

To any young person or, for that matter, to any older one, we will pay a liberal salary for looking after our renewals and for introducing our publications to new readers this summer, besides a commission on each order sent. Your only investment is the whole or a part of your spare hours. Last summer hundreds of young men and young girls had a happy summer and full pocketbooks as a result of accepting a similar invitation made then. They will do it again this year and you can join them if you wish to do so. A letter of inquiry will bring full details and everything necessary. Address

#### The fakers

(Continued from Page 23)

Chittlings laughed. "I admire your principles," he said, "but don't think much of your judgment. Good day."

Hicks went unsteadily down to his office. He sat for an hour wondering why he had juggled the amounts with Rollins as he did, and could give himself no reasonable or rational explanation. It seemed to him that Chittlings had gone into the very inner recesses of his mind and dragged out the knowledge of some subconscious impulse

recesses of his mind and dragged out the knowledge of some subconscious impulse he had. He couldn't understand it, and he was abashed and ashamed.

He saw Rollins several times during the next fortnight and talked politics. That fervid Democrat, immersed in his writings and his organization work, did not refer to the Barkiss claim, nor did Hicks. He devoted himself to discussion of the principles of Democracy and to inquiry into the of Democracy and to inquiry into the chances of a new member of the party for getting a nomination. He didn't put it exactly that way, for he did not want Rollins to think he had an ulterior motive for his inquiries. He approached the subject from various angles, asking about former campaigns and the men who had been named for the offices. Nominations, he found. for the offices. Nominations, he found, went begging. It was hard work to fill the

"I'll put you on for something next elec-tion, if you like," promised Rollins. "Oh," protested Hicks, "that would be too presumptuous on my part. I couldn't

think of it."
"It'll be all right," assured Rollins. "I can guarantee that. I had a run for every office in this part of the state, from dog catcher to state senator and member of Congress, just to make the ticket whole. I'll fix it all right. It won't be any trouble. We'll be glad to have new blood. Of course," he added, "you won't be elected to anything, so it won't interfere with your work."

Hicks didn't like that, but he remembered what Senator Paxton told him and decided to play the waiting game. It had become known he was a Democrat. The banker, Pendleton, spoke to him about it one day. "I hear you're a Democrat," he said.

"I am, a Jeffersonian-Jacksonian Demo-

"I am, a Jeffersonian-Jacksonian Demo-crat," Hicks replied with much fervor.
"What's the object?" asked Pendleton.
"The object? I don't understand you."
"I mean what's the joker in it? How comes it that a young man lights in this Republican community and begins the practice of law and affiliates with the Democratic party, when there is no slimmer, more hopeless political outfit in this Union? Why not be a Republican?"

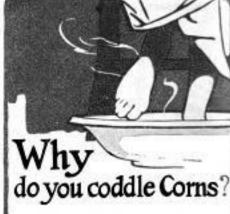

more hopeless political outfit in this Union? Why not be a Republican?"

"Mr. Pendleton," Hicks replied with a pained note in his voice, "I have faith in Democratic principles. How could I bring myself to abandon those principles for a mere temporary advantage to myself? Principles are higher than men, Mr. Pendleton, higher than anything else, to my thinking. I am a Democrat because I believe in the tenets of Democracy, and for no other purpose and with no other motive."

no other purpose and with no other motive."
"Excuse me," begged Pendleton gravely;
"I didn't know but you might have political ambitions. Most young lawyers have, you know."
"My only ambition," spouted Hicks, "is to serve my country and my party, humbly fighting in the ranks to correct the great abuses, the present maladministration of abuses the present maladministration of government affairs has fastened upon us." "I think," said Hicks to himself as Pendleton left him, "that will hold him for

Hicks sensed difficulties, nevertheless. He knew the big business interests of the city and county, the interests that provided the bulk of the law work, were solidly Republican. So too were the banks, with he exception of one, a state bank in which Rollins was interested. He had thought he detected antagonism to his Democracy once or twice when talking to business men, and he soon discovered that in communities like Rextown men take their politics seriously and are partisan even to the distribution of their business favors, although exceedingly nonpartisan when there is any-thing in it for themselves. He considered this end of it carefully and wrote to Senator Paxton about it, who sent word back to him to hang on and not be discouraged.

Hicks secured some minor cases of one kind and another, and established a considerable collection business. He had an insistent way of approaching delinquents

Why soak them and pare them? It brings only brief relief.

Blue-jay will relieve the pain instantly. It will end the corn completely, and generally in 48 hours. It is doing that to about one million corns a month.

The chemist who invented Bluejay solved the corn problem.

Apply it, and the corn is forgotten. It will never pain again. Gently the Blue-jay then loosens the corn, and in two days the corn comes out.

No pain, no trouble, no annoyance. And that corn will never need treatment again.

Old-time methods will not do this. Blue-jay is the modern method that will do this. It has done it for sixty million corns.

Prove this tonight.

SLIDEWELL COLLARS

What kind of a trunk have you; will it last through your next trip?

If it is an Indestructo, you are sure that it will last for at least five years of the hardest kind of service you can give it.

That's our guarantee; five years trunk service, regardless of what happens or how far you travel.

But if you are going to buy a new trunk, what style have you in mind? Have you thought of a wardrobe trunk? A trunk that will enable you to keep your clothes hung up throughout the entire trip as smooth and wrinkleless as they are in your closet at home.

The choice of the right sort of a wardrobe trunk is most important when you consider the tremendous strain to which a wardrobe trunk is subjected.

Indestructo wardrobes embody the famous Indestructo construction and are the strongest wardrobe trunks made.

The box is made of six-ply hardwood veneer, strong as a safe. The interior is built to wear. The clothes hangers will not break.

For your own protection avoid wardrobes built to sell at a price.

Remember! You get what you pay for.

Every Indestructo wardrobe is made to wear indefinitely, and we guarantee five years of service.

If your trunk is lost or damaged of any cause whatsoever, we will replace or repair it free of charge.

If you want trunk service you will buy Indestructo.

If you are after low price and the short life that goes with it, let Indestructo alone.

We believe we are morally responsible to our customers for every trunk we sell. Each article is exactly as we represent it.

Why not write today for the Indestructs entalique? National Veneer Products Co. Mishawaka, Ind. 1 Beiger Street

and a still more insistent manner of letterwriting, and he had some success with the deadbeats of Rextown and the surrounding country. He bought a second-hand type-writer and wrote his letters on that, and invariably put at the bottom HML-H, to convey the impression he had dictated the letter to a stenographer whose initials were "H. M. L." Sometimes when he wanted to simulate a great press of business he wrote at the bottom of his letters:
"Dictated but not read by T. Marmaduke
Hicks," and signed the useful initials
"H. M. L." to these announcements. He had seen that on a letter he received and it made a great impression on him. So he used it whenever he thought it would have

effect coming from him.

He went to church regularly, and was impeccable in his conduct and unremitting in his efforts to make the acquaintance of

men he thought might be of use to him.

He joined the good government association, the municipal league, the civic purity society, and one or two general literary and culture clubs. Twice he read papers at general meetings of the associated charities, papers he had carefully paraphrased from chapters in a book he had found containing a report of a national convention of these organizations, and these papers had been quoted, briefly, in the local papers. He had cribbed from his material skillfully and was hailed as a young man who had high ideals. He debated joining various fraternal organizations, but decided to hold that in abeyance until he saw what effect such affiliations might have on his political ambitions. He wasn't sure about this and gave the matter

considerable study.

Meantime he had toned down his attire to some extent. He never by any chance allowed the barber to cut off much of his hair. He thought seriously of raising whiskers, but finally decided he wouldn't, as he was rather proud of his facial lines and considered himself to have a serious and studious look that whiskers possibly might destroy. However, he realized fully the decorative effects that might be attained with a carefully nurtured beard

He saw Rollins frequently. That amiable patriot was deep in a controversy with Colonel Cicero Carstairs, a former representa-tive in Congress who had nothing to do but try to make people remember he had once been a statesman in Washington. Material matters did not bother Rollins much, although there were periods when he regularly visited the bank in which he was interested and dipped into its affairs. Rol-lins and Hicks talked of the fundamental lins and Hicks talked of the lundamental principles of Democracy. Hicks had ac-quired a vocabulary of Democratic expres-sions that helped him amazingly, and he kept Rollins in a perpetual state of exalta-tion by skillful flattery. He had become acquainted with and had cultivated half a dozen other Democrats who were of consequence in the city, and he was soon taken into the inner councils of that flimsy organization and consulted about contemplated action and policies. Most of the men with whom he talked, aside from these Demo-crats, couldn't understand why a young lawyer, interested in politics, should ally himself with the Democracy in a city like Rextown; but Hicks held his pose steadily. He asserted his adherence to the Democratic faith, putting forward on every suitable occasion his utter lack of personal political ambition and his intense desire to do some-

thing for the common people.

He read the reports of the debates in Congress after that body went into session, having asked the local representative to send him a copy of the Congressional Record. He had a quick and retentive mind and it wasn't long until he could make mind and it wasn't long until he could make a fair Democratic speech. It was his custom to harangue his Democratic friends at their gatherings in the office of Rollins as long as they would listen. Rollins, who dearly loved that sort of thing, encouraged him, while the others heard him because Rollins urged them to. In this manner Hicks gained practice in political speaking. He took the Democratic contention in a debate at one of his literary societies one night, and by using the patter of the party and a variety of high-sounding phrases about the "rule of the people" and other desirable reforms talked his opponent down and beforemed the judges to such an extent and befogged the judges to such an extent that he was given the verdict. Bignall printed something about this for him and gave him credit for "a masterly summingup of the principles of the Democracy."

#### THE WAR REPORTER

(Continued from Page 16)

but that is about all he will receive in the way of reward. There are no excuses for not getting the wire, and not much thanks for getting it. It is expected. If there is a wire anywhere round it is the business of the man in the field to grab it. If there isn't a wire he should string one. If it takes a day's heartbreaking ride to get to a place where he can send in a story, that is fine. Good boy, but hurry right back and do it again. There is no business in the world that is conducted so much on the proposition: What you did to-day is very good, but the important thing is, What are you going to do to-morrow?

When they were fighting at Santiago very little copy came out of Cuba by wire. Most of the stories of the events in that campaign were cabled from various ports miles and miles away. The army and the navy needed what wires there were from Cuba, and kept them almost exclusively. Dispatch boats were used by the correspondents, and the game was heartbreaking. Imagine the situation in a possible advance on the city of Mexico. There are not many wires at best, and the struggle to get out stuff will put gray into the hair of many a man, as the failure to get it cut will make grayer many an editor who is howling for news back home.

The Japanese and the Russians took along numbers of correspondents with their various divisions, and left numbers of them away behind. They treated the correspondents with the utmost consideration, but they saw to it that they remained at safe distances from the actual warfare and the actual news. As a field for the operations of the war correspondent the war between Japan and Russia was distinctly a frost. So, too, it was in the war in the Balkans. Not many Americans went to that war, but there were shoals of English, German, Russian and French correspondents, and most of these never were nearer than thirty miles to anything of importance. The defeat of Cervera's fleet at Santiago was accomplished with not one-tenth of one per cent of the correspondents in Cuba anywhere near it, and if any special commissioner sent out anything about the land battles that was worth more than passing notice I do not recall it.

#### Rules for Correspondents

So far as the war correspondent is concerned, his job is constantly getting more difficult. Our own War Department has provided a set of regulations that are in consonance with the present-day notions of military people regarding what reporters should and should not be allowed to do, largely the outcome of the rule-of-thumb methods that prevailed in the Spanish War, and in reality based on the modern military idea of warfare and its newspaper treatment.

"It is a fact," says the Secretary of War,

"It is a fact," says the Secretary of War, 
"that the press occupies a dual and delicate 
position, being under the necessity of truthfully disclosing to the people the facts concerning the operations of the army, and at 
the same time refraining from disclosing 
those things which, though true, would be 
disastrous to us if known to the enemy. It 
is perfectly apparent that these important 
functions cannot be trusted to irresponsible 
people, and can be performed only under 
reasonable rules and regulations with respect 
thereto."

That is the official army view. Of course it isn't so hard in the Navy to hold an impetuous correspondent in check. He is on a ship, and he can't get off unless the commanding officer wants him to; nor can he get any dispatches off without permission from that official. A man with an army operating on land can roam about, if he wants to take the chance, and cannot be held in check unless he is put under guard, which might cause a howl about the liberty of the press. That is, a correspondent could so roam about in the old days, but not now. As it will stand if we get into a fight with Mexico, he will do little roaming and less romancing.

There are various stipulations about credentials in the new regulations, and each correspondent is compelled to deposit one thousand dollars in cash with the adjutantgeneral of the army, to be drawn against for equipment and maintenance in the field. In addition to this his employers must give bond for two thousand dollars more for good conduct in the field, which, in case his

conduct is not good will be forfeited and donated to some charity by the Secretary

There will be an official photographer with each field army. His films and plates will be sent to Washington, developed there, and prints will be sold to all comers at nominal cost. No professional photographer or moving-picture man will be received, nor can any photographers go in the guise of correspondents. Small hand cam-eras will be allowed, but the films must be sent to the field censor, who will send them to the censor in Washington. These films will be developed in Washington and the uncensored pictures will be forwarded to any address.

There will be a chief censor in Washing-ton and one censor with the headquarters of each field army. All news or private dispatches, mail letters for publication, private letters, drawings, plans or photographs must be submitted to this censor before being sent, and cannot be sent unless ap-proved by him. No code words can be used in private or public correspondence, and any portion of a dispatch the censor thinks has a double meaning must be rewritten if the censor demands this. Information concerning names of regiments or commanders, disposition of troops, state of the army's transports, the numbers of the sick, the extent of losses in any engagement or any other similar matter cannot be sent if the censor forbids.

No news dispatches concerning any occupation or relinquishment of a position, any victory or defeat, and, in fact, any change in the army's disposition may be sent until after the official wire dispatches announcing the event have gone to Washington.

#### The Much-Censored Press

There it is, you see-"until after the official wire dispatches announcing the event have gone to Washington." That is why the bulk of the first news reporting of any war we may have with Mexico will be done in Washington, by men who are not at the front at all; and although these regulations were not in force at the time, that is why the bulk of the first news reporting in similar circumstances always has been done in Washington, for there official dispatches always take precedence over all others.

The censor controls the telegraph lines within the army, and these official wires are to be open to correspondents when not in use officially. The censor can limit the number of words that can be sent out by each correspondent and equitably adjust crowded conditions. A uniform is prescribed, and no correspondents can leave the army unless the War Department al-lows them to go. They must take the oath of loyalty, and must generally behave them-selves and not try to put anything over on the censors, or in extreme cases they may be put under arrest.
Thus does the War Department put an

additional crimp in the business of war cor-respondence as pursued by many eminent persons who are most interested in seeing that the "By William J. Boogin," or "By" whomsoever it happens to be "By," is at the top of the column than in any other fea-

ture of the business.

To be sure this will give the special commissioners ample time to compose polished pieces giving their opinions, and allow those opinions to be printed subsequently some time, if they pass the censor; but the news of this war will come from the reporters, and in these days of extras and extra-extras and double extra-extras there doesn't seem to be much hope for the development of another MacGahan or of another Archibald

There will be plenty of them there, no doubt, but they will be ornamental rather than useful, and the reporters will do the work both in the field and in Washington. At that, owing to those Spanish War expeand expenses, still painful to the recollections of the men who run the newspapers, it is quite probable that the number of distinguished literary artists who will be sent to be censored by some unfeeling army officer will be much smaller than in 1898, and for that reason the public may expect more news and less of that sort of thing so aptly illustrated by the opening line in a dispatch by one of our grandest little war correspondents, who started thus: "I always sing when I go into battle."

Flows Smoothly and Evenly

And then a Moore makes writing so much easier, because you don't have to coux it to write. Nobody likes to fuss with a pen on a hot day to start it or keep it going. But temperature doesn't bother a Moore, Starts at the first stroke and flows smoothly and evenly until you finish your letter. For when a Moore's closed up, the pen is down 1N the iak-moist and free from gumming, and ready to write at a touch.

# As Never Before

# Men Are This Year Flocking to No-Rim-Cut Tires

#### Users Increase 55 Per Cent

There are more tire users—perhaps by 20 per cent—than one year ago. But Goodyear tire sales show an increase of 55 per cent. The difference shows that tens of thousands are discarding other tires for Goodyears.

It has been so for years. The better men knew Goodyears the faster our sales have grown. Now—after millions of mileage tests—Goodyears outsell any other tire in the world. Our one-day output often exceeds a whole month's production in 1909. And we are gaining new users faster than ever before.

#### The Court of Last Resort

This verdict comes from users—the court of last resort. It comes from men who have made their comparisons—hundreds of thousands of them. It comes from men who know tire mileage, for most cars have odometers.

Never will all men agree on one tire. Good and bad fortune, abuse and accidents have too much to do with tire service.

But Goodyear has won more, and is winning men faster, than any other tire. And no other evidence compares with that in denoting superlative worth.

#### The Four Winning Features

These four great features—found only in No-Rim-Cut tires—are the reasons for Goodyear supremacy.

We ended rim-cutting by a method we control. That method has never been approached. It wiped out for our users the chief source of tire ruin.

We saved blow-outs—the countless blowouts due to wrinkled fabric. We did this by our "On-Air" cure—an extra process which adds to our tire cost \$1,500 daily.

We fought loose treads—reduced this danger by 60 per cent. We did this by creating, during vulcanization, hundreds of large rubber rivets.

We made an anti-skid as smooth running as a plain tread. Made it double-thick and tough equipped with hundreds of deep, sharp, resistless grips. It is called the All-Weather tread.

No-Rim-Cut Tires

With All-Weather Treads or Smooth

These features have saved tire users millions. No rival offers anything like them. So men have bought No-Rim-Cut tires to get them.

#### Yet 16 Makes Cost More

These tires for years—because of these features—cost more than other standard makes. But multiplied output and new efficiency cut down our factory cost,

Now 16 makers ask a higher price—up to one-half more. And for tires which embody none of our exclusive features,

It's a curious situation. Once you had to decide if No-Rim-Cut tires were worth our higher cost. Now the question is—Are some other tires worth \$5 to \$15 more?

The facts are these. We are giving you the utmost in a tire. We give you four important things no other tire can offer. But we build up to 10,000 motor tires daily. And we sold last year at an average profit of 6½ per cent. Those are the reasons for present Goodyear prices.

If you want these prices and these tires your dealer will get them for you.

#### TRAVELING DE LUXE

(Continued from Page 27)

the car after the American fashion, and the top of the car above the backs of the seats is mainly open, giving a circulation of light and air, and an effect of spaciousness which no car that is divided into compartments can have. They even go to the length of separating first and second class passengers by nothing but a glass partition—perhaps a dangerous social innovation; and the never third-class cars have center aisles and a more open arrangement overhead.

Undoubtedly a compartment to oneself, or to oneself and wife—when self and wife are on good terms—or to oneself and friend, is the most comfortable way to travel; but a compartment to oneself and three or four strangers is quite a different matter. And oneself and wife can have a com-partment or a drawing room in the United States for less than the first-class European compartment costs.

There is nothing in particular about gov-ernment ownership in this; for in France, where five-sixths of the railroad mileage is privately owned-under strict government regulation—and one-sixth is state-owned, conditions of travel are much the same on all lines. True, the best long-distance trains are not on the state road, but on the privately owned lines north and south of Paris. There is little significance in that, however, for the privately owned lines north and south have a much better passenger terri-tory. To compare the North Express or the Riviera Express with service on the state road would be almost as unfair as to compare the best trains between Chicago and New York with local trains in the Southwest.

As soon as you cross into Germany you strike something that is decidedly significant with regard to government ownership. Practically all the railroads there are state-owned—not owned by the Imperial Government, but by the several German states. The state lines of Prussia and Hesse are managed as one system. They give de-cidedly the best service in Europe, and at the lowest fares when service is taken into account.

To begin with, the German states are the only railroad owners in Europe that have made any attempt to rescue travelers from the international sleeping-car monopoly. That fact in itself would count very heavily in favor of state ownership if it were not for the other fact that state-owned lines else-where in Europe rather sick the sleepingcar concern on than attempt to muzzle it.

#### Your Money's Worth in Germany

So, to begin over again, you must start with the fact that what sort of results you get from state operation of railroads depends on what sort of state is doing the operating. That Prussia does it with considerable success no open-minded observer will deny.

Though international trains running over Prussian lines carry the sleeping cars of the Belgian corporation, the Prussian road has its own sleeping cars for travel everywhere in Germany. They are good cars, too, bet-ter than those of the International concern, with compartments somewhat larger and more conveniently arranged. And the fares are decidedly lower.

For example, the journey from Berlin to Basel is only two hours shorter than that from Paris to Berlin. The price of a berth for the latter journey—International Com-pany—is eight dollars and a half. The price of a berth for the former journey—Prussian sleeper—is three dollars and thirty cents.

That is not all the difference, however. The first-class sleeping-car fare of three dollars and thirty cents and a first-class railroad ticket-such as you are obliged to have when using a sleeping car in France or Italy-entitle you to the compartment all to yourself. To get a compartment to your-self from Paris to Berlin you must pay one sleeping-car fare and a half, or twelve dol-lars and seventy-five cents. Thus, the Prussian sleeping-car fare is roughly one-third of that charged by the International Company for equal accommodations; though even then the accommodations are not equal, for the Prussian cars, on the whole, are more comfortable.

Of course there is only one long seat in each compartment, so that half the passengers ride backward; but that is inevitable in European trains. On the Continent trains have a great habit of changing ends every now and then. You go into a station with the engine at one end and go out with it at the other end. This may be for en-gineering reasons, but I assume it is prima-rily for the purpose of giving all passengers a chance to ride forward part of the time.

The Prussian sleeping cars are cheaper than our Pullman cars, accommodations considered, because the first-class ticket gives you the compartment to yourself. You can also have a sleeping car on a second-class ticket. It is exactly the same car and the same compartment that you would have with a first-class ticket—only with a second-class ticket you must share the compartment with another traveler if there is an applicant for the second berth.

Take the journey from Berlin to Basel as a typical illustration: First-class railroad fare is seventeen dollars and fifty-five cents; first-class sleeper, three dollars and thirty cents—making twenty dollars and eighty-five cents for a fifteen-hour journey, with the compartment to yourself. Second-class railroad fare is ten dollars and ninety cents; second-class sleeper, two dollars and eightyfive cents—making thirteen dollars and seventy-five cents for the same journey with another person in the compartment.

Of course you cannot get a compartment to yourself in the United States, for a journey of equal length, at the Prussian price; but you can get a berth for about their price.

#### Soap and Towels Absent

You will notice that the difference between the cost of a first-class sleeping-car ticket and a second-class is slight. The real difference is in the railroad fare. Their first-class railroad fare is rather higher than ours, but usually when they take your firstclass money they give you a good equivalent

The German first and second class coaches are generally larger, roomier and heavier than equipment in the same category elsewhere in Europe. Their dimen-sions approximate those of American cars and almost invariably they have a modern look—as though they had been built within

historic times.

The first-class compartments are quite as large as those in France and Italy, and carry only four passengers at most, instead of Thus, even though the compartment has its full quota, you are never crowded; and you can see a tangible reason for charging a premium to ride in one, though in most other European passenger cars the reason for charging a premium to go first class is not visible to American eyes.

There is, of course, the old question as to the comparative comfort of a compartment shared with strangers as against an open car. I said a while ago that in the compartment you can hear everything your fellow occupants say. I should have made an exception in case they whisper, as did a young couple that I took to be bride and groom, with whom I shared a German compartment for half a day. He whispered in her ear; then she whispered in his ear— with innumerable little demonstrations of tender regard, for Europeans generally are so much franker than we are in giving rein to their feelings before strangers. No doubt I should have regarded the little idyl with patriarchal approval; but, as they were not minding me in the least, and as I was over by the window and they kept the door into the corridor shut, and were, in a manner, be-tween me and it, I was never more nervous in my life.

Another time, taking a train at half past seven in the morning, the only vacant place where smoking was permitted was in a compartment occupied by a family party of three—apparently husband, wife and a brother. The lady was stretched out on one seat fast asleep. When she got up to make room for me I rather expected the to extract a doo Welcome! on it from their extensive luggage and spread it out for me; but, after all, we got on very comfortably.

There are some small incidental things an American might criticize. Of course one never expects soap in Europe, but the ex-pectation of a clean towel, which seems so reasonable to us, is often not realizable on trains. The folding lavatory in my first German sleeper was provided with one hand towel. I had occasion to use it soon after boarding the train; and, having used it, threw it on the floor, with an extrava-gant American idea that the porter would carry it away. What the porter did was to

are dressy looking, feel soft to the skin; they are cool, fit snugly and are extremely comfortable. They cost no more than ordinary guaranteed hose, but the difference in quality is very noticeable.

fold it neatly and restore it to its original place. No doubt he judged that it was not sufficiently soiled, and very likely his judgment was better than mine. Certainly it

I found the toilet rooms in the first and second class German cars always provided with little boxes labeled Towels, but I was never lucky enough to find a towel in the box. What I did find was one of those venerable endless-chain affairs hung on a roller, which you pull round and round in the vain hope of discovering a clean spot. I will say for the International Sleeping-car Company that it sometimes recklessly puts three or four hand towels in the general lavatory at one time; but my experience was that when the dinner hour came round was that when the dinner hour came round
they had all seen service, and the porters
have a mysterious way of disappearing that
I never could account for. To be sure,
wiping one's hands and face on a handkerchief is no great hardship, but we do not
regard it as convenient.

Like everything else in Germany, the
cars are well plastered with signs conveying instructions, warnings and prohibitions.
Tacked up by the door of each sleeping-car
compartment is a sort of constitution and

compartment is a sort of constitution and by-laws for passengers. Beneath is a sign in large letters to the effect that passengers must take care of their own sleeper tickets, as the conductor is not permitted under any circumstances to take charge of them. Every window sill bears a conspicuous sign pararing you not to lear out the window. warning you not to lean out the window.

There are printed directions about opening
and shutting the doors and turning the
lights on and off.

#### Sixty Cents' Worth of Fodder

Your dining-car menu begins with a page of instructive literature informing you what you may and may not expect, and in a general way setting forth your relations as a diner to the German state. It winds up with a caution not to spill your wine on

the tablecloth, as wine soils table linen.

This sign business, however, is an inveterate German habit. Every taxicab in Berlin contains the sign: "Do not put your feet on the seat cushions. Do not spit on the floor." The sign is no mere idiosyncrasy of the taxicab company, either, but an official matter on the same plate that an official matter on the same plate that bears the cab number. In every elevator there is a long official placard describing the duties of the elevator operator and the proper conduct for those who ride in ele-vators. Sometimes the letter boxes bear an official warning not to forget to stamp and address your letters before mailing them.

As a matter of fact, this amazing indul-gence in signs is merely a harmless literary passion. You cannot heave a brick at the Kaiser or trespass on anybody's else rights; but, broadly speaking, nowhere in the world are you more free to go where you like and do what you please than in Germany. And in relation to travel I consider the signs an appreciable contribution to the passenger's

amusement.

The dining-car service I may add, while on this branch of the subject, is as good as that in the United States and rather cheaper, that in the United States and rather cheaper, but that is not saying a great deal for it on the score of goodness. On about one train out of ten in our own country can you get a really good dinner. The others serve food. Just food is what the German and other European dining cars serve—plenty of it, to be sure, and no doubt nourishing, but with no demoralizing appeal to the palate. Except breakfast, the meals are served at a fixed hour and on the table-d'hôte rather fixed hour and on the table-d'hôte rather than our à-la-carte plan. You take your seat in the diner at the prescribed hour and the prescribed courses are brought you in

the prescribed order.

Here is a typical bill of fare for the mid-day meal on a German diner: Soup, boiled beef, boiled potatoes, boiled cauliflower, chicken, salad, apple sauce, butter, cheese. The price is sixty cents, which is less than the same quantity of fodder would cost on an American diner. That is all there is to

Iron & Clad

The German passenger service is un-doubtedly the best in Europe and the cheapest when accommodations are considered. Their first-class fare works out two and nine-tenths cents a mile, which is some what higher than the average rate in our country and nearly fifty per cent higher than the first-class rate that prevails in a considerable part of the United States; but their first-class accommodations, on the whole, are better than ours, with the Pullman left out of account.

It is true they are not perfect. Price Collier, a warm admirer of Germany, re-cords: "Not once but many times in Germany my first-class ticket found me no accommodation, and often, in changing from the main line to a branch line, not even a first-class compartment." In the United States, however, I have had the pleasure of paying first-class fare and standing in the aisle. Normally, in the matter of space allotted to a ticket holder, German first-class services heats ourse.

service beats ours.

Their second-class fare averages a cent and a half a mile, which is under our first-class rate. Of course there is always a charge for a trunk if you are reckless enough to carry one. On the whole, they best us in the matter of punctuality. Almost inva-riably the Prussian trains start on the min-ute and arrive on the minute; in fact, people who have traveled a great deal on them tell who have traveled a great deal on them tell me a late Prussian train is so exceptional as to cause comment.

The Government operates the suburban system at Berlin and does it very well. A friend who lives six miles out pays a dollar and thirty-five cents for a monthly second-class ticket which permits him to ride as often as he pleases during the thirty days. Riding twice a day, that comes to about two and a half cents a ride. For eighty cents he can get a third-class ticket and ride as often and as fast; but he must ride on a wooden bench. They are electrifying the whole suburban system now and will make decidedly better time when the electrification is completed.

In fine, when you compare Prussian rail-road management with that of other state-owned roads outside of Germany the success is dazzling. First and second class passenger service is decidedly better and cheaper. As to first and second class pas-senger service, indeed, the Prussian roads have nothing to fear from a comparison with

those of the United States. A good many students of the subject award them the palm and I shall by no means quarrel with that award; but first and second class passenger service is only a part of any railroad's business, and as to the Prussian roads it is a very insignificant part, as I expect to show in another article.

#### Fire in Water

FURE in the middle of a tank of water instead of under a boiler is a new scheme in making steam for an engine. The idea is to save heat ordinarily wasted; for, with the fire in the middle of the water, every bit of the heat must work to heat the water, as there are no side paths by which it can

escape.

Keeping a fire blazing when practically surrounded by water is a problem that has been successfully solved. Gas or oil properly mixed with air feeds the fire. To start the flame, the tank is first emptied and the vapor fuel forced in through a pipe that ends in a nozzle pointed downward. The vapor is lighted, making a roaring torch flame shooting downward in the middle of the tank. Then the tank is partly filled the tank. Then the tank is partly filled with water until the surface of the water is well above the nozzle, entirely covering the

The vapor fuel, of course, must be forced in at some pressure in order to prevent the water from putting the fire out. The water is soon boiling violently, making steam for running the engine. The steam, mixed with gas from the burning fuel, is led into a separate tank, which is a sort of storage bin for the steam.

#### SCALLY

(Continued from Page 19)

extreme panic, owing to a terrifying noise behind it—the blast of the newest and most vulgar motor horn, to be precise—was bolt-ing right across the clearing. After the manner of hares where objects directly in front of them are concerned, the fugitive entirely failed to perceive Excalibur and, indeed, ran right underneath him on its way to cover. Excalibur was so unstrung by this adventure that he ran back to where he had

left Eileen and the curate.

They were sitting side by side on the grass and the curate was holding Eileen's

Excalibur advanced on them thankfully and indicated by an ingratiating smile that a friendly remark or other recognition of his presence would be gratefully received; but neither took the slightest notice of him. They continued to gaze straight before them in a mournful and abstracted fashion. They looked not so much at Excalibur as through him. First the hare, then Eileen and the curate! Excalibur began to fear that he had become invisible, or at least transparent. Greatly agitated he drifted away into a neighboring plantation full of young pheasants. Here he encountered a keeper, who was able to dissipate his gloomy suspicions for him without any difficulty whatsoever. But Eileen and the

curate sat on.

"A hundred pounds a year!" repeated the curate. "A pass degree and no influence! I can't preach and I have no money of my own. Dearest, I ought never to have told you."

"Told me what?" inquired Eileen softly. She knew quite well; but she was a woman, and a woman can never let well enough.

and a woman can never let well enough

The curate, turning to Eileen, delivered himself of a statement of three words. Eileen's reply was a softly whispered Tu

quoque!
"It had to happen, dear," she added cheerfully, for she did not share the curate's burden of responsibility in the matter. you had not told me we should have been miserable separately. Now that you have told me, we can be miserable together. And when two people who-who hesitated

The curate supplied the relative sen-tence. Eileen nodded her head in acknowl-

edgment. Yes; who are-like you and me-are

miserable together, they are happy! See?"
"I see," said the curate gravely. "Yes,
you are right there; but we can't go on living on a diet of joint misery. We shall have to face the future. What are we going to do about it?"

Then Eileen spoke up boldly for the first

"Gerald," she said, "we shall simply have to manage on a hundred a year."

But the curate shook his head.
"Dearest, I should be an utter cad if I allowed you to do such a thing," he said.
"A hundred a year is less than two pounds

a week!"

"A lot of people live on less than two
pounds a week," Eileen pointed out long-

Yes; I know. If we could rent a threeshilling cottage and I could go about with a spotted handkerchief round my neck, and you could scrub the doorsteps, coram populo we might be very comfortable; but the clergy belong to the black-coated class, and people in the lower ranks of the blackcoated class are the poorest people in the whole wide world. They have to spend money on luxuries—collars and char-women, and so on—which a workingman can spend entirely on necessities. It wouldn't merely mean no pretty dresses and a lot of hard work for you, Eileen. It would mean starvation! Believe me—I know! Some of my friends have tried it-

"What happened to them?" asked

Eileen fearfully

"They all had to come down in the endsome soon, some late, but all in time—to taking parish relief."
"Parish relief?"

Parish relief?"

"Yes; not official, regulation, rate-aided charity, but the infinitely more humiliating charity of their well-to-do neighbors—quiet checks, second-hand dresses, and things like that. No, little girl; you and I are too proud—too proud of the cloth—for that. We will never give a handle to the people who are always waiting to have a fling at the improvident clergy-not if it breaks

our hearts, we won't!"
"You are quite right, dear," said Eileen quietly. "We must wait."
Then the curate said the most difficult

thing he had said yet:
"I shall have to go away from here."

Eileen's hand turned cold in his.
"Why?" she whispered; but she knew.

"Because if we wait here we shall wait forever. The last curate in Much More-ham—what happened to him?"
"He died."

"Yes-at fifty-five; and he had been here for thirty years. Preferment does not come in sleepy villages. I must go back to London."

"The East End?"

"East or south or north-it doesn't signify. Anywhere but west. In the east and south and north there is always work to be done—hard work. And if a parson has no money and no brains and no influence, and can only work-run clothing clubs and soup kitchens, and reclaim drunkards-London is the place for him. So off I go to London, my beloved, to lay the foundations of Paradise for you and me— for you and me!"
There was a long silence. Then the pair

rose to their feet and smiled on each other extremely cheerfully, because each sus-pected the other—rightly—of low spirits. "Shall we tell people?" asked the curate.

Eileen thought, and shook her head.
"No," she said; "nicer not. It will make a splendid secret."
"Just between us two, eh?" said the

curate, kindling at the thought.

"Just between us two," agreed Eileen. And the curate kissed her very solemnly. A secret is a comfortable thing to lovers, especially when they are young and about to be lonely.

At this moment a leonine head, sup-ported on a lumbering and ill-balanced body, was thrust in between them. It was Excalibur, taking sanctuary with the Church from the vengeance of the Law.

"We might tell Scally, I think," said

"Rather!" assented the curate. "He introduced us."

So Eileen communicated the great news to Excalibur.

You do approve, dear-don't you?" she said.

Excalibur, instinctively realizing that this was an occasion when liberties might be taken, stood up on his hind legs and placed his forepaws on his mistress' shoul-

ders. The curate supported them both.
"And you will use your influence to get us a living wage from somewhere—won't you, old man?" added the curate.

Excalibur tried to lick both their faces at once-and succeeded.

SO THE curate went away, but not to London. He was sent instead to a great manufacturing town in the north, where the work was equally hard, and where Angli-can and Roman and Salvationist fought grimly side by side against the powers of drink and disease and crime. During these days, which ultimately rolled into years, the curate lost his boyish freshness and his unfortunate tendency to put on flesh. He grew thin and lathy; and, though his smile was as ready and as magnetic as ever, he seldom laughed.

He never failed, however, to write a cheerful letter to Eileen every Monday morning. He was getting a hundred and twenty pounds a year now; so his chances of becoming a millionaire had increased by twenty per cent.

Meantime his two confederates, Excaliand Eileen, continued to reside at Much Moreham. Eileen was still the recognized beauty of the district, but she spread her net less promiscuously than of ore. Girl friends she always had in plenty, but it was noticed that she avoided intimacy with all eligible males of over twenty and under forty-five years of age. No one knew the reason for this except Excalibur. Eileen used to read Gerald's letters aloud to him every Tuesday morning; sometimes the letter contained a friendly message to Excalibur himself.

In acknowledgment of this courtesy Excalibur always sent his love to the curate—Eileen wrote every Friday—and he and Eileen walked together, rain or shine,

### May We Send You Both of These?

### FREE Book

"The Household Helper"

We have for you-FREE-an unusual and handsome recipe book of household helps. It is a first aid to economy in these "high cost" days. It is FREE,

#### A Toy Stove, 16c (stamp)

This we also have ready to send you: A toy representation of a Florence Oil Stove, Any child will enjoy this unique plaything. Harmless—not to be lighted. Again, may we send you both of these? Write today, giving dealer's name.

# **FLORENCE**

Oil Cook Stoves

Time had to come when you could get a safe, reliable oil stove. It has. In Florence Oil Stoves you now have safety, reliability—and more! You have simplicity and sessions.

Florence Oil Stoves have no wicks, no valves. The oil supply is automatic. The heat is regulated by turning the simple little (but patented) lever device. You can have a slow, sim-

mering fire on one burner and at the same time a 4 Burner High Frame Florence Automatic

quick, hot fire on another. Just set the levers as you want them — and the same heat will be given as long as you wish.

More than that, Florence Oil Stoves give more hear for the oil consumed—with a steady Blue Flame. And it only costs about two-thirds of a cent an hour per burner. Cheaper than coal or gas.

Clean, convenient and cool, Florence Oil Stoves are a boon to any kitchen. Investigate. Ask your dealer now or write us for catalog.

#### Florence Glass Door Ovens

Visible baking means better baking at a fuel saving. Cold air leept out smill baking is done. Oven grates true front to back. No slopping nor spilling. Arbestos lined. Rant proof. Has arched roof, bakers' oven top which ensures an even heat distribution. Florence stores and ovens are fully guaranteed.

Write usiny for either "The Household Helper," FREE-or for the toy stove. 16c (stumps)—or both. Piense mention dealer's name.

CHALMERS KNITTING CO. 1 Bridge Street, Amsterdam, N. Y.

such a regular correspondence. The curate was seen no more in his old parish. Railroad journeys are costly things and curates' holidays rare. Besides, he had no overt excuse for coming. And so life went on for five years. The curate and

on Friday afternoons to post the letter in the next village. Much Moreham's post office was too small to remain oblivious to

Eileen may have met during that period, for Eileen sometimes went away visiting. As Excalibur was not privileged to accom-pany her on these occasions he had no means of checking her movements; but the chances are that she never saw the curate, or I think she would have told Excalibur

about it. We simply have to tell some one. Then, quite suddenly, came a tremen-dous change in Excalibur's life. Elleen's brother-in-law—he was Excalibur's master no longer, for Excalibur had been trans-ferred to Eileen by deed of gift, at her own request, on her first birthday after the curate's departure—fell ill. There was an operation and a crisis, and a deal of unhap-piness at Much Moreham; then came convalescence, followed by directions for a sea voyage of six months. It was arranged that the house should be shut up and the children sent to their grandmother at Bath.

"That settles everything and every-body," said the gaunt man on the sofa, "except you, Eileen. What about you?" "What about Scally?" inquired Eileen.

Her brother-in-law apologetically admitted that he had forgotten Scally.
"Not quite myself at present," he men-

tioned in extenuation. "I am going to Aunt Phœbe," announced

Eileen.
"You are never going to introduce Scally into Aunt Phobe's establishment!" cried

Eileen's sister.

"No," said Eileen; "I am not." She rubbed Excalibur's matted head affection-

rubbed Excalibur's matted head affection-ately. "But I have arranged for the dear man's future. He is going to visit friends in the north. Aren't you, darling?" Excalibur, to whom this arrangement had been privately communicated some days before, wagged his tail and endeav-ored to look as intelligent and knowing as possible. He was not going to put his be-loved mistress to shame by admitting to her relatives that he had not the faintest idea what she was talking about. what she was talking about.

However, he was soon to understand. The next day Eileen took him up to Lon-don by train. This in itself was a tremendous adventure, though alarming at first.
He traveled in the guard's van, it having been found quite impossible to get him into an ordinary compartment-or, rather, to

an ordinary compartment—or, rather, to get any one else into the compartment after he lay down on the floor. So he traveled with the guard, chained to the vacuum brake, and shared that kindly official's dinner.

When they reached the terminus there was much bustle and confusion. The door of the van was thrown open and porters dragged out the luggage and submitted samples thereof to overheated passengers, who invariably failed to recognize their own who invariably failed to recognize their own

property and claimed some one else's.

Finally, when the luggage was all cleared out, the guard took off Excalibur's chain and facetiously invited him to slight for London Town. Excalibur, lumbering del-icately across the ribbed floor of the van, arrived at the open doorway. Outside on the platform he espied Eileen. Beside her stood a tall figure in black.

With one tremendous roar of rapturous recognition, Excalibur leaped straight out of the van and launched himself fairly and squarely at the curate's chest. Luckily the

curate saw him coming.
"He knows you, all right," said Eileen

with satisfaction.

"He appears to," replied the curate.

"Afraid I don't dance the tango, Scally, old man; but thanks for the invitation, all the

Excalibur spent the rest of the day in London, where it must be admitted he caused a genuine sensation-no mean feat in such a blasé place.

In Bond Street the traffic had to be held up both ways by benevolent policemen, because Excalibur, feeling pleasantly tired, lay down to rest. When evening came they all dined

together in a cheap little restaurant in Soho and were very gay, with the gayety of peo-ple who are whistling to keep their courage up. After dinner Eileen said good-by, first to Excalibur and then to the curate. She was much more demonstrative toward the former than toward the latter, which is the way of women.

Then the curate put Eileen into a taxi and, having with the aid of the commission-aire extracted Excalibur from underneath he had gone there under some confused impression that it was the guard's van again—said good-by for the last time; and Eileen, smiling bravely, was whirled away out of sight.

As the taxi turned a distant corner and

As the taxi turned a distant corner and disappeared from view, it suddenly oc-curred to Excalibur that he had been left behind. Accordingly he set off in pursuit. The curate finally ran him to earth in Buckingham Palace Road, which is a long chase from Soho, where he was sitting on the pavement, to the grave inconvenience of the inhabitants of Pimlico, and refusing to be comforted. It took his new master the best part of an hour to get him to Euston Road, where it was discovered they had missed the night mail to the north. Accordingly they walked to a rival station and took

another train.
In all this Excalibur was the instrument of Destiny, as you shall hear.

#### VII

THE coroner's jury was inclined at the Board of Trade inquiry established the fact that the accident was due to the enginedriver's neglect to keep a proper lookout. However, as the driver was dead and his freman with him, the law very leniently took no further action in the matter.

About three o'clock in the morning, as the train was crossing a bleak Yorkshire moor seven miles from Tetley Junction, the curate suddenly left the seat on which he lay stretched dreaming of Eileen and flew across the compartment on to the recumbent form of a stout commercial traveler. Then he rebounded to the floor and woke

up—unhurt.

"Tis an accident, lad!" gasped the commercial traveler as he got his wind.

"So it seems," said the curate. "Hold tight! She's rocking!"

The commercial traveler, who was mechanically groping under the seat for his boots—commercial travelers always re-move their boots in third-class railroad compartments when on night journeysfollowed the curate's advice and braced himself with his feet against the opposite seat for the coming bouleversement.

After the first shock the train had gathered way again—the light engine into which it had charged had been thrown clear off the track—but only for a moment. Suddenly the reeling engine of the express left the rails and staggered drunkenly along the ballast. A moment later it turned over, taking the guard's van and the first four coaches with it, and the whole train came to a standstill.

It was a corridor train, and unfortunately for Gerald Gilmore and the commercial traveler their coach fell over corridor side downward. There was no door on the other side of the compartment—only three windows, crossed by a stout brass bar. These windows had suddenly become skylights.

They fought their way out at last. Once

They fought their way out at last. Once They lought their way out at last. Once he got the window open, the curate experienced little difficulty in getting through; but the commercial traveler was corpulent and tenacious of his boots, which he held persistently in one hand while Gerald tugged at the other. Still, he was hauled up at last, and the two slid down the perpendicular roof of the coach to the permanent dicular roof of the coach to the permanent

way.

"That's done, anyway!" panted the drummer; and sitting down he began to put on his boots.

"There's plenty more to do," said the consate grimly, pulling off his coat. "The

"There's plenty more to do," said the curate grimly, pulling off his coat. "The front of the train is on fire. Come!"

He turned and ran. Almost at his first step he cannoned into a heavy body in rapid motion. It was Excalibur.

"That you, old friend?" observed the curate. "I was on my way to see about you. Now that you are out, you may as well come and bear a hand."

The pair sprinted along the line toward the blazing coaches.

the blazing coaches.

It was dawn—gray, weeping and cheer-less—on Tetley Moor. Another engine had come up from behind to take what was left of the train back to the Junction. Seven coaches, including the lordly sleeping saloon, stood intact; four, with the engine and tender, lay where they had fallen, a mass of charred wood and twisted metal.

A motor car belonging to a doctor stood in the roadway a hundred yards off, and its (Continued on Page 73)

owner, with a brother of the craft who had been a passenger on the train, was attending to the injured. There were fourteen of these

to the injured. There were fourteen of these altogether, mostly suffering from burns. These were made as comfortable as possible in sleeping berths their owners had vacated. "Take your seats, please!" said the surviving guard in a subdued voice. He spoke at the direction of a big man in a heavy overcoat, who appeared to have taken charge of the salvage operations. The passengers clambered up into the train.

Only one hesitated. He was a long, lean young man, black from head to foot with soot and oil. His left arm was badly burned; and seeing a doctor disengaged at last he came forward to have it dressed.

The big man in the heavy overcoat

last he came forward to have it dressed.

The big man in the heavy overcoat approached him.

"My name is Caversham," he said. "I happen to be a director of the company. If you will give me your name and address I will see to it that your services to-night are suitably recognized. The way you got those two children out of the first coach was splendid, if I may be allowed to say so. We did not even know they were there."

The young man's teeth suddenly flashed out into a white smile against the blackness.

out into a white smile against the blackness

of his face.
"Neither did I, sir," he said. "Let me

introduce you to the responsible party."

He whistled. Out of the gray dawn loomed an eerie monster, badly singed,

loomed an eerie monster, badly singed, wagging its tail.

"Scally, old man," said the curate, "this gentleman wants to present you with an illuminated address. Thank him prettily!"

Then, to the doctor: "I'm ever so much obliged to you; it's quite comfortable now."

He began stiffly to pull on his coat and waistcoat. Lord Caversham, lending a hand, noted the waistcoat and said quickly:
"Will you travel in my compartment? I should like to have a word with you if I may."

"I think I had better go and have a look at those poor folks in the sleeper first," replied the curate. "They may require my services professionally."

"At the Junction, then, perhaps?" suggested Lord Caversham.

At the Junction, however, the curate found a special waiting to proceed north by a loop line; and, being in no mind to re-ceive compliments or waste his substance on a hotel, he departed forthwith, taking his charred confederate, Excalibur, with him.

FORTUNE, once she takes a fancy to you, is not readily shaken off, however, as most successful men are always trying to forget. A fortnight later Lord Caversham, leaving his hotel in a great northern town accountered an accountered she had town, encountered an acquaintance he had

no difficulty whatever in recognizing.

It was Excalibur, jammed fast between two stationary tramcars—he had not yet shaken down to town life—submitting to a painful but effective process of extraction at the hands of a posse of policemen and tram conductors, shrilly directed by a small but commanding girl of the lodging-house

drudge variety.

When this enterprise had been brought to a successful conclusion and the congested traffic moved on by the overheated policemen, Lord Caversham crossed the street and tapped the damsel on the shoulder. "Can you kindly inform me where the owner of that dog may be found?" he

inquired politely.

"Yas. Se'nty-one, Pilgrim Street. But 'e won't sell him."
"Should I be likely to find him at home if I called now?"
"Yas. Bin in heat since the continuous."

"Yas. Bin in bed since the accident.
Got a nasty arm."

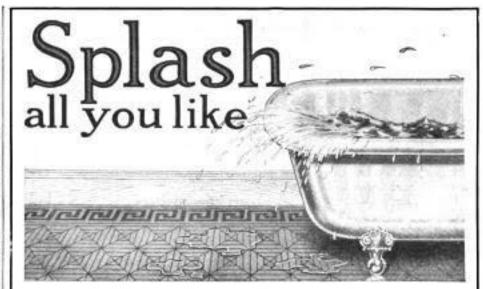

"Perhaps you would not mind accompanying me back to Pilgrim Street in my

After that Mary Ellen's mind became an incoherent blur. A stately limousine glided up; Mary Ellen was handed in by a footman and Excalibur was stuffed in after her in installments. The grand gentleman entered by the opposite door and sat down beside her; but Mary Ellen was much too dazed to converse with him.

The arrival of the equipage in Pilgrim Street was the greatest moment of Mary Ellen's life.

Meantime upstairs in the first-floor front the curate, lying in his uncomfortable flock bed, was saying:

"If you really mean it, sir-"I do mean it. If those two children had been burned to death unnoticed I should

never have forgiven myself, and the public would never have forgiven the company.

"Well, sir, since you say that, you—
well, you could do me a service. Could you
possibly use your influence to get me a
billet—I'm not asking for an incumbency;
any old curacy would do—a billet I could
marry on?" He flushed scarlet. "I—we
have been waiting a long silence, and the curate

There was a long silence, and the curate wondered whether he had been too merce-nary in his request. Then Lord Caversham

asked:
"What are you getting at present?"
"A hundred and twenty a year."
This was about two-thirds of the salary

Lord Caversham paid his chauffeur. He asked another question in his curious, abrupt staccato manner:

"How much do you want?"
"We could make both ends meet on two hundred; but another fifty would enable me to make her a lot more comfortable," said the curate wistfully.

The great man surveyed him silently— wonderingly, too, if the curate had known.

Presently he asked:
"Afraid of hard work?"
"No work is hard to a man with a wife and a home of his own," replied the curate

with simple fervor.

Lord Caversham smiled grimly. He had more homes of his own than he could conveniently live in, and he had been married three times; but even he found work hard now and then. "I wonder!" he said. "Well, good after-

noon. I should like to be introduced to your fiancée some day."

A TRAMP opened the rectory gate and shambled up the neat gravel walk toward the house. Taking a short cut through the shrubbery he emerged suddenly on a little lawn.

On the lawn a lady was sitting in a basket chair beside a perambulator, the occupant of which was slumbering peacefully. A small but intensely capable nursemaid, prone on the grass in a curvilineal attitude, was acting as tunnel to a young centleman of these who

the grass in a curvinness acturage, was acturage as tunnel to a young gentleman of three who was impersonating a locomotive.

The tramp approached the group and asked huskily for alms. He was a burly and unpleasant specimen of his class—a class all too numerous on the outskirts of the great too numerous on the outskirts of the great. industrial parish of Smeltingborough. The

lady in the basket chair looked up.
"The rector is out," she said. "If you go into the town you will find him at the Church Hall and he will investigate your

"Oh, the rector is out, is he?" repeated the tramp in tones of distinct satisfaction. "Yes," said Eileen.

The tramp advanced another pace.
"Give us half a crown!" he said. "I haven't had a bite of food since yesterday, lady—nor a drink neither," he added humorously.

"Please go away!" said the lady. "You know where to find the rector."

The tramp smiled unpleasantly, but made no attempt to move.

"You refuse to go away?" the lady said.
"I'll go for half a crown," replied the tramp with the gracious air of one anxious to oblige a lady.
"Watch baby for a moment, Mary Ellen," said Eileen.

She rose and disappeared into the house, followed by the gratified smile of the tramp.

followed by the gratified smile of the tramp. He was a reasonable man and knew that ladies did not wear pockets.

"Thirsty weather," he remarked affably, Mary Ellen, keeping one hand on the shoulder of Master Gerald Caversham Gilmore and the other on the edge of the baby's perambulator, merely chuckled sardonically.

The next moment there were footsteps round the corner of the house and Eileen reappeared. She was clinging with both hands to the collar of an enormous dog. Its tongue lolled from its great jaws; its tail waved menacingly from side to side; its great limbs were bent as though for a spring. Its eyes were half closed as though

to focus the exact distance.
"Run!" cried Eileen to the tramp. "I can't hold him in much longer!

This was true enough, except that when Eileen said "in" she meant "up." But the tramp did not linger to discuss grammar. There was a scurry of feet, the gate banged and he was gone.

With a sigh of relief Eileen let go of Ex-calibur's collar. Excalibur promptly col-lapsed on the grass and went to sleep again.

## BARRACKS AND BEGGARS

Women Unloading Coal in Berlin

By WILL PAYNE

T WAS Gambetta, I believe, who described the goal of militarism as "a beggar sitting beside a barrack door"; and in Gambetta's time militarism was merely

in its infancy. Italy has progressed considerably further toward that goal than any her European power. The little shop in Genoa was closed. It fronts upon a tortuous reet—one of many such streets—so narrow that no horse-drawn vehicle can get rough it. With outstretched arms and a walking stick in one hand you can almost uch the houses on both sides. They are six and seven stories high and the outswung utters in the top stories seem fairly to meet. The tiny shops on the ground floor piled with all sorts of goods, from cabbages to lace, and the street swarms with sy-looking people.

The wooden shutter of this particular little shop was down. A piece of paper the e of a playing card was tacked in the center of the shutter, bearing a scrawled notice the effect that the shop was closed owing to the death of the proprietor, and on the tice was a duly canceled government stamp.

There is a government stamp on everything. Communications to the government d lawyers' pleadings must be on duly stamped paper. The government's eager eyes

are ever watching for any place where a tax will stick, and as soon as the spot appears a tax is promptly stuck on. Thus if you hire another servant or another clerk your

taxes go up. If you pay a little more house rent the government argues that you must have a little more wealth or income, and so moves your taxes up a notch. There is a tax on windows, doors, signs, a hearth tax and, of course, the octroi tax.

German Infantry on Parade

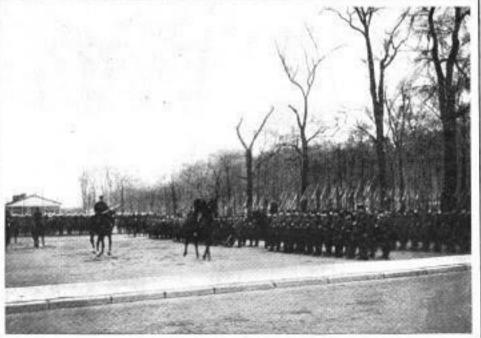

Excepting Japan, Italy is probably the most heavily taxed country in the world; and it is by no means a rich country. It lives by close economy. You see the pinch everywhere—in the country you see it in the painfully intensive cultivation, carried up stony hillsides on carefully constructed terraces; in town you see it in other ways.

One might say, for example, that the whole United States is anxious to get a better job, while all Italy is anxious simply to keep the job it has. Often that attitude cropped out in my talks with Italians. Several of them repeated substantially this axiom:

"If a man loses a good job here he's done for; he can never get another one."

Hence a prevailing ambition to cement oneself to the job one has, which finds expression in various ways. The government, operating the railroads, telegraph, telephones and post, is a large employer of salaried labor and, in spite of amazingly low

Ragpickers in the Streets of Paris

Review of French Troops Near the Invalides

Where the Poor Live in an Italian City

Italian Troops Parading in Rome

pay, salaried government positions are much sought because, as is the case with governments almost everywhere, a man once in the employ of the state is practically never discharged and never promoted.

Discharging any salaried man in Italy is a serious and more or less difficult operation. After a journalist has been employed by a paper three months, for example, he acquires a sort of vested right in his job. The management cannot discharge him except by paying him from three to twelve months' full salary, according to length of service and the position he holds.

All this, of course, reflects a poor country, living close to the margin, with limited opportunity. But with a third of our population, four per cent of our area and a fraction of our wealth, Italy spends more than half as much yearly as we do—regard being had to the central government in both cases.

The first tax is on land. As usual there are some gross inequalities; but including levies by the central government and by the province and communes, Italian land owners generally pay from a fifth to a quarter of the income from the land in taxes. Then there is a tax on buildings, which is based on two-thirds the actual income from factories and three-fourths the actual income from houses. On those proportions of the actual income the tax amounts to about sixteen per cent. Next there is a tax on incomes, except those derived from land. This income tax amounts to about twenty per cent, but is levied on only three-eighths of the income derived from government salaries and pensions and only three-fourths of the income derived from professions or from manufactures. Even at that it is high enough to induce heart disease in all objectors to our income tax.

#### How Bankruptcy Follows the Tax Gatherer

THEN there are the stamp and octroi taxes, which touch all sorts of business transactions and virtually all articles of general consumption, the octroi taxes going mainly, of course, to the cities where they are collected. There are heavy import duties, especially on wheat. Finally, salt and

tobaccoare government monopolies from which the state derives an important revenue.

"The way in which taxes press on the poor may be shown by the number of small proprietors sold up, owing to inability to pay land and other taxes. Between 1884 and 1902 no fewer than two hundred and twenty thousand sales were effected for failure to pay taxes," says one writer.

In round numbers one hundred and twenty-five million dollars of this painfully extracted money goes to support the army and navy, while over a hundred millions more goes to pay interest on an enormous debt that was mostly created by past wars. Naturally the government finds it difficult to lay hold of

enough money to build a new telephone exchange, when one is needed, and to improve its railroads.

Military service, of course, is universal and compulsory. Every able-bodied male aged twenty must serve two years in the active army, then eight years in the active reserve with one month's training a year, then four years in the militia with a month's active training yearly, then five years in the territorial army with a month's training a year. The active army comprises about three hundred thousand persons, the active reserve about seven hundred thousand.

The Market of the Poor, Whitechapet

The navy also is recruited by a compulsory service and comprises about thirty thousand men. Italy has fourteen battleships and twenty-seven cruisers affoat or building.

Nowhere, outside of Japan, are taxes heavier. Nowhere, so far as I can discover, are they more cheerfully paid.

"Your army and navy are a tremendous burden," I suggested fatuously to an Italian.

He was not connected with the army or navy or any other branch of the government, nor with an armament factory or a gunpowder trust. He was neither a plutocrat nor a chauvinist, but a modest, highly intelligent, welleducated professional man in middle circumstances with a growing family. Up to then the conversation had been progressing in the pleasantest possible way. But at that fatuous observation he shut his jaw hard, contracted his eyebrows, and shot a forbidding look at me while he declared with genuine passion:

"It isn't heavy enough! Many Italians now living can remember the rule of Austria and of the states of the Church. They know from experience what sort of government there was in Naples and at Venice and at Rome—with France always sticking a finger into our affairs according to her selfish policies—until Italians risked their last man and last cent to govern their own country."

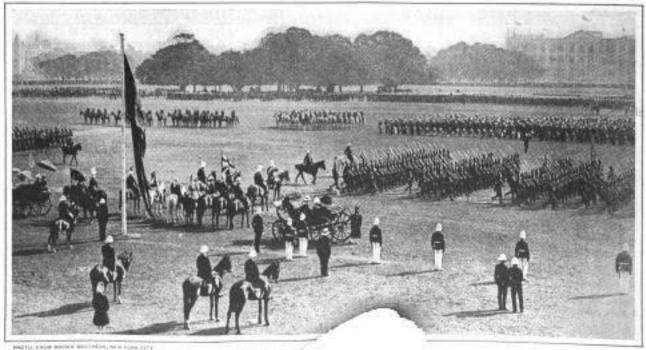

#### Vivid Memories of Austrian Misrule

FIGURATIVELY shriveling up, I tried to make myself realize that the shocking misrule of Austria and of the Papal States—the latter supported by Austrian bayonets—had actually been within the memory of men still living; that when the nineteenth century was well along, men were flung into prison by the score on a mere whim in Rome, that spies swarmed and assassination was the most conspicuous—and safest—form of political activity. Gladstone does not seem far away from us. It was he who described the Bourbon rule at Naples as "the negation of God erected into a system of government." But you need to have the printed page at hand to make yourself realize that the Italian conditions which he wrote about were affairs of the nineteenth century and not of the twelfth. It

was only forty-two years ago that Victor Emmanuel, as the representative of the Italian people, entered Rome to make it the capital of a nation.

Remembering these things naturally heats the blood, and I was almost ready to assure my Italian friend that if I were his countryman I, too, should be passionately in favor of more regiments and dreadnoughts, even if we had to sell up four hundred thousand peasants for nonpayment of taxes instead of only a beggarly two hundred thousand.

And that was my invariable experience when discussing miltarism in Europe. In Italy you catch their point of view. The very air is saturated with it. (Continued on Page 6)

English Troops

#### FANNIE HURST SUPERMAN

insidious paradox—where men meet nose to nose in THE canker of the city is loneliness. It flourishes—an subway rushes and live layer on layer in thousandenant tenement houses. It thrives in three-dollar-a-week ourth-floor back rooms, so thinly partitioned that the rumple of the rejection slip and the sobs of the class oetess from Molino, Missouri, percolate to the four-dollar--week fourth-floor front and fuddle the piano salesman's vening game of solitaire. It is a malignant parasite, which ats through the thin walls of hall bedrooms and the hick walls of gold bedrooms, and eats out the hearts it nds there, leaving them black and empty like untenanted

Sometimes Love sees the To Let sign, hangs white Swiss artains at the window, paints the shutters green, plants a ed of red geraniums in the front yard and moves in. gain, no tenant applies; the house mildews with the damp its own emptiness; children run when they pass it after ark; and the threshold decays. The heart must be manted or it falls out of repair and rots. Doctors, called

the watches of the night to suscitate such hearts, climb out bed reluctantly. It is a malady eyond the ken of the stethoscope. One such heart beat in a woman's reast so rapidly that it crowded it her breath; and she pushed ie cotton coverlet back from her som, rose to her elbow and aned out beyond her bed into the irkness of the room.

"Jimmie? Essie? That you, mmie?"

The thumping of her heart anered her and the loud ticking a clock that was inaudible durg the day suddenly filled the ird-floor rear room of the thirdor rear apartment. The con-ual din of the street slumped to e intermittent din of late eveng; the last graphophone in the ilding observed the nine o'clock ence clause of the lease at someing after ten and scratched its it syncopated dance theme into e tired recording disk of the last ed brain. An upholstered chair, nk in the room's pool of darkss, trembled on its own tautened rings, and the woman trembled that same tautness and leaned ther out.

"Who's there? That you?" She huddled the coverlet up under her chin and lay back her pillow, but with her body so rigid that only half her ight relaxed to the mattress; and behind her tightsed eyes flaming wheels revolved against the lids. Tears i backward toward her ears like spectacle frames and ked into the pillow; a mouse with a thousand feet

rried between the walls.

'Essie? Jimmie, that you?" l'ick-tock-tick-tock-tick-tock!

More tears leaked out from her closed eyes and found ir way to her mouth so that she could taste their salt. en for a slight moment she dozed, with her body at full etch and hardly raising the coverlet, and her thin cheek ped in the palm of her thin hand. The mouse scurried light rain of falling plaster and she woke with her pulse

inding in her ears. Jimmie? Jimmie? Who's there?"

Fick-tock-tick-tock-tick-tock!

jobs trembled through her and set the bedsprings vibrat-, and she buried her head under her flat pillow and fell counting the immemorial procession of phantom sheep t graze the black grasses of the Land of Wakeful Hours l lead their sleepless shepherds through the long pastures he night.

'Three hundred'n five; three hundred'n six; three idred'n seven; three hundred'n-Jimmie?'

key scratched at the outer lock and she sprang twods from the bed, dragging the coverlet from its moorings. Jimmie, that you?

Sure, maw! 'Smatter?"

he relaxed as though her muscles had suddenly snapped, tense toes and fingers uncurled, and the blood flowed

I \_\_\_\_ Nothin', Jimmie; I was just wondering if that you."

No, maw; it ain't me-it's my valet coming home n a dance at his Pressing Club. You ain't sick, are you,

"Jimmie, my boy!" "Hello, maw!"

"Jay, Listen to That Trot They're Playin'! Come On, Sie; be a Sport!"

"No. What time is it, Jimmie? It's so dark."

"You been havin' one of your spells again, maw?"

"No, no, Jimmie."

"Didn't you promise to keep a light going?"

"I'm all right."

"Ouch! Gee-whillikens, maw, if you'd burn half a dime's worth of gas till me and Essie get home from work nights we'd save it in wear and tear on our shins. I ain't got no more hips left than a snake."

"It's a waste, Jimmie-boy; gas comes so high."
"You should worry, maw! Watch me light 'er up!"

"Be careful in there, Jimmie! Stand on a chair. I got a little supper spread out on the table for Essie and her friend. You take a sandwich yourself -

"Forty cents in tips today, maw."

"Forty cents!"

"Yeh; and a dame in Seventieth Street gimme a quarter and hugged the daylights out of me till my brass buttons made holes in me, and cried brineys all over the telegram, and made me read it out loud twice, once for each ear: 'Unhurt, Sweetheart, and homeward bound-Bill.' Can you beat it? Five cents a word!"

"Jimmie, wasn't you glad to carry her a message like that?"

"It's a paying business, maw, if you're lucky enough to

deal only in good news."

A chair squealed on its castors, a patch of light sprang through the transom, and the chocolate-ocher bedroom and its chocolate-ocher furniture emerged into a chocolateocher half-light.

"Jimmie?

"Huh?"

"I'm-I wish -- Oh, nothin'!" "Ain't you feelin' right in there, maw?"

"Yes, Jimmie; but-but come in and talk to your old mother a while, my boy." "Surest thing you know! Say, these are some sand-

wiches! You must 'a' struck pay dirt in your sardine mine!"

"They're for her gen'l'man friend, Jimmie."

The door flung open and threw an island of light pat on the bed. In the gauzy stream the face on the pillow, with the skin drawn over the cheeks tight as a vellum on a snare drum, was yague as a head by an artist who paints through the sad film of a growing blindness.

"Ain't your cheeks cold, though, Jimmie? It's right sharp out, ain't it? And Essie with a cold, and in her thin coat! You-you're a little late to-night, ain't you,

He drew his loose-jointed figure up from over the bedside, and his features, half-formed as a sculptor's head just emerging from the marble, took on the easy petulance of youth, and he wiped the moist lips' print off his downy cheek with the back of his hand.

"Ah, there you go again! You been layin' here frettin' and countin' the minutes again, ain't you? Gee, it makes a fellow sore when he just can't get home no sooner!'

"No, no, Jimmie; I been layin' here sleepin' sound ever since I went to bed. I woke up for the first time just now. I'm all right, Jimmie, only-only -

"Honest, maw, you ought to ask the company to put me in short-pants uniform again, day duty, carrying telegrams of the day's catechism to Sunday-school Classes!"

Don't fuss at me, Jimmie! I-I guess I must 'a' had one of them smothering spells, and I didn't wait up for Essie and Joe to-night. I'm all right now, Jimmie—all right."

He placed his heavy hand on her brow in half-understanding

sympathy.

"Gee-whillikens, why don't you tell a fellow? You want some of that black medicine, maw. You gee!—you ain't lookin' kinda bluelike round the gills, are you? Old man Gibbs said we should send for him right away if -

"No, no, Jimmie; I'm all right

"Look! I brought you a carnation one of the operators gimmeone swell little queen too. You want some of that black medicine, maw?"

"I'm all right now, Jimmie. It was just earlier in the evening I kinda had a spell. Ain't that pink pretty though! Here, put it in the glass; and gimme a French kiss. Always ashamed like a big baby when it comes to kissin', ain't you! Ashamed to even kiss your old maw!"

"Aw!" He shuffled his feet and bent over her, with the red mounting above the gold collar of his uniform.

"And such a mamma-boy you used to be before you had to get out and hustle-such a mamma-boy-and now ashamed to give your old maw a kiss!"

"Ashamed nothin'! Here, maw, I'll smooth your hair for you the wrong way like Essie used to do when you came home from the store dead after the semiannual clearings."

"No, no, Jimmie; these days I ain't got no more hair left to smooth."

"You look good to me!"

"Aw, Jimmie, quit stringing your old maw. How can a stack o' bones look good to anybody?"

"You do!"

"Your papa used to say so too, Jimmie; but in them days my hair was natural curly—little cute, springy curls like Essie's. The first day he seen me he fell for 'em; and the night before he died, Jimmie, with you and Essie asleep in; your folding cribs and me little thinkin' that the next week I'd be back in the department clerking again, he took me in his arms and

"Yes, yes; I know, maw-but didn't the old Gibbs say not to get excited? Lay back and don't talk, maw. I can feel your heart beatin' 'way down in your hands."

"You're all tired out, ain't you, Jimmie?-too tired to listen to my talk; but you're going to wait up for your sister's young man to-night, ain't you, my boy? Go wet your hair and smooth it down. You'll wanna see him, Jimmie.

"Fine chance."

"Sure he's coming to-night, Jimmie. I got their supper all waitin'; and see, there's my flowered wrapper at the foot of the bed, so I can get up and go in when ——"

"Aw, cut out the comedy, maw! She ain't comin' straight home after the show any more'n a crooked road; and if she does he ain't coming with her."

"Jimmie, she promised sure to-night."

"Didn't she promise last night and the night before, and the night before that?"

"But this afternoon when she left for the matinée, Jimmie, I wasn't feelin' so well; and she promised so

"Them girl ushers down there is too lively a bunch for her, maw. Ushin' in a theayter is next to bein' in the chorus-only -

"Jimmie!"

"Sure it is-only it ain't so good one way and it ain't so bad another. This newfangled girl ushin' gets

my goat anyways. It ain't doin' her any good."
"Oh, Jimmie, don't I know it? I hated to see her take it-her so little and cute and pretty and all! Night work ain't nothin' for our Essie.'

Sure it ain't!"

"But what could we do, Jimmie? After I gave out, her six a week in the notions wasn't a drop in the bucket. What else could we do, Jimmie?"

"Just you wait, maw! This time next year life'll be one long ice-cream soda for you and her. Wait till my dynamo gets to running like I want her to-I'll

be runnin' this whole shebang with a bang!"
"You're a good boy, Jimmie; but a kid of seventeen ain't expected to have shoulders for three."

"Just the samey, I showed a draft of my dynamo to the head operator, maw, and he's comin' up Sunday to have a look. Leave it here on the table just like it is, maw. You'll be ridin' in your Birdsong selfcharging electric automobile yet!"

She let her fingers wander up and down his cheek and across his shoulders, and into his uneven nappy hair.

Poor Jimmie! If only you had the trainin'! Miss Maisie was up from the store today in her noon hour and seen it standing here next to my bed; and she thought it was such a pretty-lookin' dynamo, with its copper wires and all."

"You didn't let her

"No-honest, Jimmie! See-it ain't been touched; I didn't even let her go near the table's edge. She wanted to know when I was comin' back to the storeshe says the corsets have run down since they got the new head saleslady, Jimmie."

"If I'd 'a' been here I'd 'a' told her you ain't going back."

"Sometimes I-I think I ain't, neither, Jimmie."

"What?"

"Nothin'."

"When you get well, maw, then I ----"

"Then I'm going back on my job, Jimmie. Eighteen years-not countin' the three years your papa lived—at doing one thing sort of makes you married to it. I got my heart as set as always, Jimmie, on gettin' you in at the Electric Training School next door. If I hadn't broke down

"Nix for mine, maw!"

"Every day I sit by the window, Jimmie, and see the young engineers and electricians who board there goin' to work; and it breaks my heart to think of you, with your mind for inventions, runnin' the streets—a messenger boy just when I was beginnin' to get where I could do for you."

"Aw, cut that, maw! Don't I work round on my dynamo every morning till I go on duty? Wouldn't I look swell with an electricity book under my arm! I'd feel like Battling John drinking tea out of an eggshell."

"The trainin' school's the place for you, Jimmie. If you'd only take the dynamo over to the superintendent and show him where you're stuck, he'd help you, Jimmie. I been beggin' you so long, and if only you wasn't so stubborn!"

"I ain't got the nerve, buttin' in over there; it's for

fellows who got swell jobs already."

"There's classes for boys too, Jimmie; the janitor told me. Just go to-morrow and show your dynamo. It won't hurt nothin' and maybe they'll know just what the trouble is-it's only a little thing, Jimmie-three times in succession it worked last night, didn't it? It won't hurt to go, Jimmie-just to go and show it."

"Nix; I ain't got the nerve. You just wait! I ain't got the trainin'; but didn't I sell my double lens the day after I got the patent? Didn't I make that twenty-five just like

"The janitor says you was robbed in it, Jimmie."

"We should worry! Didn't we get a rockin'-chair and a string of beads and a tool chest out of it?"

"It ain't you worries me so much, Jimmie. Here, put your head here on the pillow next to me, Jimmie. My heart's actin' up to-night. It ain't you worries me-you're a man like your papa was and can hit back; but Essie-if

You don't handle her right, maw; you're too easygoing with her. Since she went on her new job she's gettin' too gay-too gay!"

"Jimmie!"

"Just Tell Her Everything's All Right - Everything's Comin' All Right for All of Us"

"Sure she is. Like I told her last night when she came in all hours from dancing-if she didn't take that war paint off her face I'd get her in a corner and rub it off

"I've begged her and begged her, Jimmie, just as hard as I ever begged you about the dynamo, to wash her face of it. It's eatin' me, Jimmie-eatin' me! There wasn't a girl in the store that didn't envy that girl her complexion. Oh, Jimmie, it ain't the paint alone-it's where it can lead to."

"She needs an old-time spankin'."

"Them girls down at the theayter where she works put them ideas in her head. It's only of late with her, Jimmie. Wasn't she like a little baby when I had her across from me in the notions?"

"She's gotta keep her face clean or I'll -

"She needs somebody strong like her papa was to handle her, Jimmie. She's stubborn in ways, like you, and needs somebody older, my boy-somebody strong that can handle her and love her all at once."

"She's gotta quit sneakin' home at all hours. She don't pay no attention to me; but she's gotta quit or I-I'll go down and smash up that whole theayter crowd of 'em!'

"If she'd 'a' had a father to grow up under it would 'a' been different. He was one of the strongest men in the power house, Jimmie. Mechanics make strong men, my boy, and that's why my heart's set on you, Jimmie, takin' up where he left off.

"It's that job of hers, maw; it ain't no hang-out for her down there round the lights. She's gettin' too gay. I'll smash that ticket speculator to gelatin if he don't show up or leave her alone!"

"Sh-h-h, Jimmie! He's her young man; she says he's a upright and honorable young man, with intentions."

"Where she hidin' him then?" "He-he's bashful about comin', Jimmie. Last night on her knees right here by this bed she told me, Jimmie, with her eyes like saucers, that he's said everything but come right out and ask her."

"What's the matter? Is he tongue-tied?"

"A fine fellow, she says, Jimmie—up to date as a new dime, makin' from thirty to forty a week. Get that, Jimmie?

Forty a week! On forty a week, Jimmie, what they could do for themselves and for you!'

"I wanna look him over first. I knew a fellow in that game got forty a week and ninety days once, too."

"Jimmie!"

"There's a bunch of speculators used to hang round the Forty-second Street telegraph office, with one eye always on the cop and the other always open for rubes. They was all hunchbacks from dodging the law."

"He ain't one of them kind, Jimmie."

"Then why don't he have a roof over his head instead of doing sidewalk business?"

"Ticket speculatin' is like any other business, Essie says. Profit is profit, whether you make it on a sheet of music, a washboard or a theayter ticket."

"Then why don't he show his face round here, instead of runnin' her round night after night when she ought to be home sleepin'?"

"I don't know, Jimmie, except what she says. I just feel like I couldn't stand her not bringing him to-nightlike-like I couldn't stand it, Jimmie.'

Lay easy there, maw.'

"They're young, I guess, and gotta have life; but I hy here with it in front of me all night, long after she gen home and is sleepin' here next to me as light as a daisy. She's so little and pretty, Jimmie."

"I wanna get my glims on him –

"What, Jimmie?"

"I wanna see him."

"Me, too, Jimmie. I wouldn't care much about anything else if I could see him once; and if he is big and strong like your father was

"That gang don't come big and strong. They

got big heads and little necks."

"The kind of fellow that would know how to trust you when you got stubborn, and would put his hard on your shoulder and not try to drive you. If he was a man like that, Jimmie, the kind you and Esse need, I—I'd stop fightin'; I'd fold my hands and say to God: 'Ready! Ready right this minute!'"

"Ready for what, maw?"

"Ready, Jimmie, my boy. Just hands folded and ready—that's all.'

"Aw, cut it, can't you, maw? I-maw, quit scarin' a fellow. Quit battin' your eyes like thattryin' to flirt with me, ain't you, maw? Quit it, now Lemme get you some of that black medicine—you're gettin' one of your spells. Just lemme run downstairs and send Lizzie Marks out to get old man Gibbs."

"No, no, Jimmie—don't leave me! Hold me, my boy, so I can feel your face. Don't cry, Jimmis: there ain't nothin' to cry about."

"Cut the comedy, maw! I ain't cryir': I'm sweatin'."

"Jimmie, are-you-there? I feel so-so heavy." "Sure I am, maw-right here, holding you in my arma-Feel! There's the scar where old Gibbs sewed my face the time I got hit with a bat-feel, maw-see, it's me."

"What's that, Jimmie, on the foot of the bed-movin" "See, maw-that's your flowered glad-rag. You're go-goin' to put it on when Essie and her gen'I'man fried come in. It ain't movin'; I shoved it."

"Don't muss it, Jimmie."

"No; see, I smoothed out its tail-it's a sash for you maw." "Jimmie, you won't leave me? It gets so dark, and-the

"You couldn't pry me away with a crowbar, maw! I.

hold you till you yell 'Leggo!' Lemme go for old Gibbs maw; you're breathing heavy as a pump. "No, no, Jimmie; don't leave me."

"Sure I won't; but you're all twitchin' and jumpin maw. Just leave me run down and send Lizzie Marks in him."

"No, no, Jimmie; I'm all right."

"Sure, maw? You-you're actin' up so funny."

"It ain't nothin'-only Um an old woman, Jimmie. A of a sudden I got old and broke. It ain't the same in the department, Jimmie, with Essie gone from the notice across the aisle. Always when we were overstocked in corsets she-she-Essie -

"Aw, maw, you ain't talkin' straight. Lemme have man Gibbs.'

"I'm talking straight, Jimmie. Ain't I layin' right he in your arms, and ain't my hair caught round one of ye brass buttons?-quit pullin', Jimmie! Essie's hair # = bright, Jimmie. I can see it shinin' in the dark when the

sleepin'."
"Some hair the kid's got! Remember the night #took me and her to -

"Sh-h-h-h! Ain't that them coming? Ain't it, Jinn I ain't equal to gettin' up, Jimmie. Bring 'em in heres

"Like fun it's them! Whatta you bet right now ther" holding down a table for two at the Palais du Dam Swell joint!"

"Oh, Jimmie!"

"I was kiddin', maw-only kiddin'. Open your eyes, maw. Gwan! Be a sport and open up! Remember, maw, when I was a kid, how I used to make you laff and laff, makin' a noise like a banjo-plunka-plunk-plunk-plunkplunka-plunk?"

"Yes, Jimmie,"

"I knew I'd get a laff out of you-plunka-plunk-plunkaplunk!"

"Yes, Jimmie, my boy! Go on! I like to lay here and remember back. Essie was always grabbin' your spoon-I used to slap her little hands and -

'Maw, open your eyes! Don't go off in one of 'em again." See, they're open, Jimmie! I can see your gold buttons shinin' and shinin'-I ain't sleepin'; I'm only waitin'.'

"She ain't had time to get home yet, maw. They gotta pick up programs and turn in lost articles and all." Put your arms round me, Jimmie. I keep slippin'."

"Lemme run for old man Gibbs, maw. Please! "No, no, Jimmie! Sing like you used to when you was a

little kid, Jimmie; I used to laff and laff." "Plunka-plunk-plunk-plunk!"

Sh-h-h! There's the chimes-you won't never tell me the right time nights, when I ask you, Jimmie."

"It ain't late, maw."

"Sh-h-h! What time is that? Listen!"

"It's early. Don't you count chimes, maw-it's a sign of snow to count 'em, and Essie's got her thin jacket on. Listen! This is a swell one I know: Plunk! Plunk! Plunk! Plunk! -

"Sh-h-h, Jimmie! One-two-three-four-five-sixseven-eight-nine-ten-

See, it ain't late."

"Leven! You can't cheat me, I heard the last one."

"Leven already? Well, whatta you know about that! Them chimes is always ahead of themselves.

"Jimmie, my boy, quit playin' with your old maw."
"They'll be comin' soon now."

"Don't leave me, Jimmie."

"Sure I won't-see!"

"Jimmie! Jim-mie-

"Maw! Maw, open your eyes! Maw darlin'-please-

"Sing, Jimmie, like-a banjo."

"Plunka-plunk-plunka-plunk!"

On that last boom of eleven the Stuyvesant Theater wing its doors outward as the portals of a cuckoo clock by open on the hour, and women in fur-collared, brocaded mats, which wrapped them to the ankles, and carefully curved smiles that Watteau knew so well and Thackeray knew too well, streamed out into the white flare of Broadway, their delicate fingers resting lightly on the tired arms of tired business men, whose faces were like wood carving and whose wide white shirtfronts covered their hearts Ike slabs.

Almost before the last limousine door had slammed and the last tired business man had felt the light, compelling pressure of the delicate finger tips on his arm, and turned his tired eyes from the white lights to the whiter lights of cafés and gold-leaf hotels, the interior of the Stuyvesant Theater, warm and perfumed as the interior of a jewel box, blinked into soft darkness. Small figures, stealthy espions of the night, padded down thickcarpeted aisles, flashing their pocket searchlights now here, now there; folding rows of velvet seats against

velvet backs; reaching for discarded programs and seat checks; gathering up the dainty débris of petals fallen from too-blown roses, an occasional webby handkerchief, an odd

glove, a ribbon.

Then the dull red eyes above the fire exits blinked out, the sea of twilight deepened, and the small searchlights flashed brighter and whiter, glowworms in a pit of night.
"For Pete's sakes! Tell Ed to give back

them lights; my lamp's burnt out.

"Oh, hurry up, Essie! You girls up there in the balcony would kick if you was walkin' a tight rope stretched between the top stories of two Flatiron Buildings."

"It's easy enough for you to talk down there in the orchestra, Lulu Pope. Carriage shoes don't muss up the place like subway shoes."

"Gimme the balcony over the orchestra every time.

"What about us girls 'way up here in the chutes? Whatta you say about us, Lulu Pope-

playin' handmaids to the gallery gods? "Chutes the same, I used to be in the chutes over at the Olympic, and six nights out of the week I carried water up the aisles without a stop. Lookin' each row in the eye too!"

Like fun!"

"Sure's my name's Lulu Pope! Me an' a girl named Della Bradenwald used to play Ani-

mal or Vegetable Kingdom every entracte with the fireman." "Oh-h-h! Say, Loo, you oughtta see what I found up

"Leave it to Essie Birdsong for a find! What is it this time-the diamond star the queen in E was wearin'?

"A right-hand, number five and a half-white stitchin"." "Can you beat it? And you ain't never had a claim yet at the box office."

"I knew my luck would break, Lulu. My little brother Jimmie says if you break a comb your luck breaks with it. I broke one this morning. Whatta you bet now I begin to match every one of my five left-hand gloves, without a claim from the office?'

"Lucky kid!"

Conversation curved from gallery to loge box and from loge to balcony.

'Gee! Look at this amber butterfly! I seen it in her hair when I steered her down the aisle. She must be stuck on

"If You Don't Like Our Company Me and Harry Can Manage to Worry Along Jomehow!"

something about this show-third time this week, and not on paper neither."

Amber, is it, Sadie? I'll trade you for the tortoiseshell one I found in G 4; amber'll go swell with my hair." "Whatta you bet she claims it?

"Nix."

"Say, did you hear Wheelan fumble her big scene to-night? I was dozin' in the foyer and she tripped over her cue so hard she woke me up.

"I should say so! I was standing next to the old man, and he let out a line of talk that was some fireworks; he said a super in the mob scene could take her place and beat her at pickin' up cues."

"Ready, Sadie?"

"Yes; wait till I turn in one gent's muffler and a red curl."

"Are you done up there too, Essie?"

"Yes; but you needn't wait for me, Loo. If you're in a hurry I'll see you down in the locker room."

Seats slammed; laughter drifted; searchlights danced and flashed out as though suddenly doused with water; and the gold, crystal, velvet, and marble interior of the Stuyvesant Theater suddenly vanished into its imminent wimple of blackness.

In the bare-walled locker room Miss Essie Birdsong leaned to her reflection in the wavy mirror and ran a fine pencil line along the curves of her eyebrows.

'Is this right, Loo?'

"Swell! Your eyes look two shades darker,"

"Gee!"

Miss Birdsong smiled and leaned closer.

"The girls all out, Loo?"

"Yeh; hurry up and lemme have that mirror, Ess-Harry gets as glum as glue if I keep him waiting.

Miss Pope adjusted a too-small hat, with a too-long pheasant's wing cocked at a too-rakish angle on her brass-colored hair, and powdered her already powdered cheek bones.

"Here-you can have the mirror first, Loo. I-I ain't in a hurry to-night. You and Harry better go on and not wait round for me."

Miss Pope placed her long, birdlike hands on her slim hips and slumped inward at the waistline; her eyes had the peculiar lambency of the blue flame that plays on the surface of cognac and leaves it cold.

What's hurtin' you, Ess? The whole week you been makin' this play to dodge me and Harry! If you don't like our company, Essie, me and Harry can manage to worry along somehow!"

"Oh, Lulu, it-it ain't that, and you know it."

"You're all alike. Didn't my last chum, Della Bradenwald, do the same thing? I interdooced her to a gen'l'man friend of mine, a slick little doorman for a two-a-day show, and what did she do? Scat! After the second day it was Good-by, Loo-Loo! They went kitin' it off together and dropped me and Harry like parachutes."

'Loo darlin', honest, me and Joe just love goin' roudancin' with you and Harry; but-but-"Then what's hurtin' you?"

"You Know All Righty, Missy, Why She Wants You to Wash It - You Know

"It's maw again, Loo. She looked like she was ready for one of her spells when I left; she's been worse again these two days and the doctor says we mustn't get her excitedher heart's bum, Loo."

"Say, I used to have heart failure myself, and I know a swell cure—Hartley's Heart's Ease. Honest, when I was over at the Olympic I used to go dead like a tire. Lend me your eyestick, Ess."

"You'll laff, Loo; but she's daffy for me and Joe to come home after the show; she's never seen him at all,

"Oh, I gotta flashlight of Joe goin' to call on your old

lady!"
"When maw and I was clerkin' the girls and fellows
"When maw and I was clerkin' the girls and fellows Maw was as lively as any of us in those days; and we'd have sardine sandwiches, and my kid brother used to imitate all kinds of music and actors; and we used to laff and laff until they'd knock on the ceiling from upstairs and maw'd pack the whole lot of 'em home. Why don't you and Harry come up to-night too, Loo? And we'll have a little

"Nothin' doin', Beauty. There's a Free-for-All Tango Contest round at the Poppy Garden to-night; and believe me, I wouldn't mind winning that pink ivory manicure set. All I gotta ask is one thing, Ess! Bring me a snapshot of Joe doing the fireside act!"

The glaze of unshed tears sprang over Miss Birdsong's eyes like gauzy clouds across a summer sky.

"I-that's just it, Loo. I can't get him to come. Sometimes I think maybe it's just because he's stringing me along; and I-he-he was your friend first, Loo. Ain't he ever said anything to you about me-about-aw, you know what I mean, Loo."

"He's stuck on you, girl. I know Joe Ullman like I know the floor plan of this theater."

"Honest, Loo, do you think so?"

"Sure! I knew Joe when I was making sateen daisies in a artificial flower loft on Twenty-second Street, and him and my brother was clerkin' in a cigar store on Twenty-third, and running a neat little book on the side."
"A book?"

"Yes, dearie-a pretty picture book."

"Joe never told me."

"He ain't always been the thirty-dollar-a-week kid he is now-take it from me. Just the samey, you can thank me for interdoocing you to the sharpest little fellow that's selling tickets on the sidewalks of this great and wicked city!"

"I always tell him he ought to save more—taxis and all he has to have, that spendy he is!"

"Sidewalk speculatin' is a good pastime if you're sharp enough; and I always tell Joe he's got a edge on him like a

"Like a razor! Aw, Loo, you talk like he was a barber." "Sure, he's that sharp! Take Harry now: he's as slick as a watermelon seed when it comes to pickin' a sheet of music with a whistle in it; but put him in a game like Joe's, with the law cross-eyed from winkin' and frownin' at

the same time, and he'd lose his nerve!"
"It ain't a game, Loo. Joe says there ain't a reason why a fellow can't sell a theater ticket at a profit, just like Harry

sells a sheet of music. Sidewalks are free for all." "Leave it to Joe to stretch the language like a rubber

band. His middle name is Gutta-Percha. "He was your friend first."

"He is yet, Beauty-even if you have grabbed him. I like him—he's one good sport; but with Joe's gift for tongue work he could make a jury believe a Bowery jewelry store ought to have a habeas corpus for every body it snatches; he could rob a cradle and get a hero medal for it."

"I-sometimes I-I don't know how to take him, Loo. We've been goin' together steady now; and sometimes I think he—he likes me, and sometimes I think he don't."

"Take it from me, you got him goin'. I never knew him to take a five-evenings-a-week lease on anybody's time." "Six."

"Six! For all I know, you—you're keepin' things from me. Lemme see your left hand—whatta you blushing for, Beauty? Whatta you blushing for?"

"Aw, Loo!"

"Say, how does this jacket look, Ess? Half them judges over there at the Poppy watch your clothes more'n your face."

"Swell!"

"Well, is this where me and Harry exit, Beauty?"

"Yeh; you go shead, Loo. I-I'll tell Joe you and Harry went on ahead to-night."

"I gotta half bottle of Hartley's Heart's Ease at home, Ess. Tell your old lady to have it on me. Don't you worry, kiddo. I used to have heart trouble so bad I'd breathe like a fish at a shore dinner—and look at me now! I'll bring it to-morrow-a tablespoonful before meals."

Good night, Loo. I'll see you Monday."

"Put on a little more color there, Ess, or you'll never get nothin' out of him. You look as scared as an oyster. Lordy, you can handle him easy! Lemme know what happens. S'long! S'long!"

"Good night, Loo!" Miss Birdsong brushed at her soft cheeks with the pink tip of a rabbit's foot and the color sprang out to match the rose-colored sateen facing of her hat. Her lips opened in a faint smile; and after a careful interval she scrambled into her jacket, flung a good night to the doorman and burried through the gloomy foyer.

No sham like the sham of the theater! Its marble facade is classic as a temple, and its dirty gray-brick rear opens out on a cat-infested alley. The perfumes of the audi-torium are the fumes of the wings. Thespis wears a custommade coat of many colors, but his undershirt is sackcloth.

(Continued on Page 26)

### Business at Judicial Discretion

F ONE could imagine human society suddenly confronted with the necessity of enact-

ing a criminal code and undertaking to do it in a single statute, he would be able to realize in a way what those who formulated the Sherman Antitrust Law attempted.

Mr. Justice Harlan tells us that at the time this law was enacted there was everywhere, among the people generally, a deep feeling of unrest. "The nation had been rid of human slavery-fortunately, as all now feel-but the conviction was universal that the country was in real danger from another kind of slavery sought to be fastened on the American people-namely, the slavery that would result from aggregations of capital in the hands of a few individuals and corporations controlling, for their own profit and advantage exclusively, the entire business of the country, including the production and sale of the necessaries of life. Such a danger was thought to be then imminent, and all felt that it must be met firmly and by such statutory regulations as would adequately protect the people against oppression and wrong."

In order to meet this condition it was necessary to formulate a law that would prohibit new wrongs not before this time defined in any statute. This was a tremendous undertaking—as difficult as though in the imaginary state the lawmakers were suddenly called on to formulate a statute covering all the varieties of crime.

No state could have a general statute prohibiting all crimes. That would leave the courts in every case to say what a crime is. No man would know how to conduct himself, and every man would be at the mercy of a prosecutor and might be haled into court for any sort of imaginary wrong. The absurdity of the thing when applied to our criminal procedure is at once apparent. Nevertheless, it was by a single general statute that Congress undertook to prohibit the new wrongs and to punish the new crimes against our commercial civilization.

Senator Edmunds, who drafted the statute, took the position that restraint of trade, like fraud, ought not to be defined, and that a general prohibition of it was sufficient. The first and second sections of the Sherman Law were formulated to meet this new condition.

The first section provided that every contract, combination in the form of trust or otherwise, or conspiracy in restraint of trade or commerce among the several states or with foreign nations, was to be declared illegal. And the second section provided that eson who should ombine, or monopolize or attempt to me monopolize conspire with any other perany part of the trade or the several states, and so on, should ! anor. And both sections provided and prisonment.

It was a sweeping enactment against every restraint of trade and every attempt to monopolize-as sweeping as though a state had undertaken to prevent all wrongdoing by the enactment of a single statute prohibiting the commission of crimes. This law remained for a long time practically ineffective.

By MELVILLE DAVISSON POST

One of the early attorney-generals considered it unconstitutional. It is said that he had been attorney for a great trust, and he advised the president under whom he served that it was unwise to endeavor to enforce the statute. Some attorney-generals were disinclined to act, and the ability of others recalls Doctor Johnson's remark on a nobleman of his time who had been elevated to a high office: "His parts, sir, are pretty well for a lord, but would not be distinguished in a man who had nothing else but his parts."

During the last year of McKinley's Administration it was a complete dead letter, and it has been only under recent administrations that any effort has been made to enforce it. From 1897, however, the law had had a curious history. On March twenty-second of that year, in the Trans-Missouri Freight Case, the Supreme Court of the United States decided that this law applied to all restraints of trade, and that the term "contract in restraint of trade" used in it meant every contract in restraint of trade and was not limited to the kind of contracts that were in unreasonable restraint of trade.

The great corporations of the country undertook to induce the Supreme Court to say that this law meant only unreasonable restraints of trade, but in plain terms the court refused to do so.

Having failed to persuade the court to change this law by judicial amendment, the great business interests went to Congress and endeavored to have the law amended so as to apply only to unreasonable restraint of trade or commerce. The Senate Judiciary Committee reported against this amendment. They said that so to change it would be entirely to emasculate the law and for all practical purposes render it nugatory as a remedial statute.

And so the law remained until the Standard Oil Case and the Tobacco Trust Case came into the Supreme Court of the United States in 1910. The following year, in the decisions in those cases, the Supreme Court amended the law by inserting the word "undue"-an amendment that Congress had refused to make and one for which the great business interests had all along contended.

By judicial amendment the court, in the case of the Standard Oil Company of New Jersey, interpreted the law to mean not that every restraint of trade was prohibited,

as the act said, but "only undue restraints of interstate or for-

eign trade or commerce are pro-hibited by the provisions of the act of July 2, 1890." And so by the decision in that case the rule of reason became the measure for the purpose of determining whether in a given case a particular act had or had not brought about the wrong against which the statute provided.

One of the ablest members of the court dissented forcibly from this decision:

"By every conceivable form of expression," he said, "the majority, in the Trans-Missouri and Joint Traffic Cases, adjudged that the act of Congress did not allow restraint of interstate trade to any extent or in any form; and three times it expressly rejected the theory, which had been persistently advanced, that the act should be construed as though it had in it the word unreasonable or undue. But now the court, in accordance with what it denominates the rule of reason, in effect inserts in the act the word undue, which means the same as unreasonable, and thereby makes Congress say what it did not say—what, as I think, it plainly did not intend to say, and what, since

the passage of the act, it had explicitly refused to say.

"It has steadily refused to amend the act so as to tolerate a restraint of interstate commerce even where such restraint could be said to be reasonable or due. In short, the court now, by judicial legislation, in effect amends an act of Congress relating to a subject over which the legislative department of the Government exclusively has cognizance.

Almost the dissenting justice persuades us to believe him right against the majority of the court. Even in the day when Lord Mansfield drank champagne with the wits it was considered questionable taste to ask a court to reverse itself. "Does it not lessen the confidence of the public?" wrote the author of The Rambler. "Will not be who knows himself wrong to-day hope that the courts of justice will think him right to-morrow?"

After this decision the law, which had been in the mo general terms, became wholly uncertain. The courts could have said what restraint of trade was, as a matter of fact. perhaps; but whether or not there was undue restraint of trade was a great, vague question, to be decided in every case. Moreover, the law would now seem to admit that certain kinds of restraint of trade were permissible. It was as though a general statute prohibiting all crimes was now amended to prohibit only undue crimes.

By this decision the Supreme Court not only assumed the prerogative of the national legislature and amenda the law in a way that the national legislature had refused to do, but by this decision the courts were granted the great latitude of deciding cases according to the economic

theories of the presiding judge—that is to say, the law was now so large and vague that every court could decide it practically as it pleased. Whether or not an act was prohibited under this law became a question of the opinion of the court trying the case.

The courts now sat under it as boards of control to determine how the business of the country ought to be conducted, and with no restraint on them except their opinion. They were no longer bound to enforce the penalties of the statute because a restraint of trade was proved. They must be convinced that it was an undue restraint of trade. They could apply the rule of reason and, having no precedent before them, the rule of reason could be any sort of measure they liked. It is said that the Duc d'Uzès, chevalier d'honneur to Louis the Fourteenth, being asked by the queen what o'clock it was, replied:

"What your Majesty pleases!"

Mr. Justice Harlan was not misled about the sweeping ffect of this decision:

"I have a strong conviction," he said, "that it will hrow the business of the country into confusion and invite videly extended and harassing litigation, the injurious ffect of which will be felt for many years to come. When Congress prohibited every contract, combination or nonopoly in restraint of commerce it prescribed a simple, lefinite rule that all could understand, and which could be asily applied by every one wishing to obey the law and ot to conduct their business in violation of law. But now t is to be feared we are to have in cases without number he constantly recurring inquiry, difficult to solve by proof, thether the particular contract, combination or trust avolved in each case is or is not an unreasonable or undue estraint of trade.

"Congress, in effect, said that there should be no restraint f trade in any form, and this court solemnly adjudged nany years ago that Congress meant what it thus said in lear and explicit words, and that it could not add to the ords of the act: but those who condemn the action of ongress are now, in effect, informed that the courts will llow such restraints of interstate commerce as are shown ot to be unreasonable or undue."

#### The Peril of Vague Statutes

MICHARD II made the crime of treason so vague that in the first year of his successor an act was passed reciting: That no man knew how he ought to behave himself, to do, eak or say, for doubt of any such pains of treason."

Under the Sherman Law as it is now judicially amended se perplexities of the business interests of the country are ecisely expressed by the opening paragraph of this atute of Henry IV. The people do not know what straints of trade are to be prohibited. The business terests do not know how far they may go with such straints. They may go to a certain length—but what is it? Every business engaged in interstate trade is conducted the peril of the opinion of the attorney-general. It is nducted at the peril of the opinion of the Federal judges. is the prerogative of the courts to say how the business the country is to be conducted, and what is proper and nat is not proper in restraints and monopolies.

The extraordinary situation has had no equal except the early history of the English-speaking people, when

the crime of high treason was thus indeterminate. Sir William Blackstone tells us that by the ancient common law there was "a great latitude left in the breast of the judges" to determine what was treason or not so-precisely as there is to-day "a great latitude left in the breast of the judges" to determine what is undue restraint of

Sir William Blackstone was not of the opinion that such a condition was one to be desired. The result of this great latitude does not inspire us with confidence when we read his comment on it.

"Whereby," he continues, "the creatures of tyrannical princes had opportunity to create abundance of constructive treasons—that is, to raise by forced and arbitrary constructions offenses into the crime and punishment of treason which never were suspected to be such."

Our history does not encourage us to believe that civilization will be advanced by setting up the judges as governors of public conduct and with latitude to say what is or is not an offense against the public welfare.

Montesquieu said that to leave the crime of high treason indeterminate was alone sufficient to make any government degenerate into arbitrary power. Restraint of trade and the effecting of monopolies are the highest crimes against commerce; and yet this decision leaves them indeterminate, with a great latitude in the breast of the judges to determine what they are.

The old law writers said that as treason was the highest crime which—considered as a member of the communityany man can possibly commit, it ought therefore to be the most precisely ascertained. In order to rescue the country from a condition of industrial slavery, as Mr. Justice Harlan indicated, restraint of trade was made a great statutory crime. Therefore, if it is the highest crime against our commercial civilization, ought it not to be the most precisely ascertained?

We have not been without abundant illustration of the evils of leaving Federal statutes uncertain-their meaning at the discretion of the Federal judges. The litigation against the Standard Oil Company of Indiana is a conspicuous example. This company was indicted under the Elkins Law on nineteen hundred and three counts charging that its product was hauled by the Chicago and Alton Railroad Company at less rates than those named in the tariff schedules published and filed by that company with the Interstate Commerce Commission.

The company was tried on fourteen hundred and sixtytwo counts and found guilty. District Judge Landis imposed the maximum fine on every count, making in the aggregate a fine of \$29,240,000.

The so-called Elkins Law, under which this indictment was brought, was so indefinite that nobody could say what it meant. No one knew from the language of the act what constituted an offense. Did it mean that the thirty-six payments for shipments constituted one offense or thirtysix offenses? Did it mean that every time a consignment of cars was moved that constituted one offense or that the moving of every car was an offense, or the moving of every barrel or gallon or pound of oil?

The case was taken to the Circuit Court of Appeals and was reversed, this court holding that the gist of the offense was the acceptance of the concession, irrespective of whether the property involved was carloads, trainloads or pounds;

and finally the case, after being remanded, was heard by Judge Anderson and dismissed.

The question of whether there had been a definite rate published and filed before the Interstate Commerce Commission had also perplexed the judges. Judge Landis was of the opinion there was no such rate. The Circuit Court of Appeals said: "The most we can say is that the question is one on which judges, after full discussion, might very reasonably disagree.

Judge Anderson said: "Therefore, gentlemen of the jury, if it is a matter about which reasonable men may differ or trained judges may disagree; the Court of Appeals says, after reviewing these papers, after looking them over and after consulting together, that they cannot tell what the rate is, that reasonable men might differ on that question, then, of course, the evidence is not sufficient to warrant you in finding that these papers establish that rate beyond a reasonable doubt."

If judicial discretion on indefinite statutes may extend from not guilty to a fine of twenty-nine million dollars, can we imagine any circumference to inclose it? Decision at the pleasure or at the whim or caprice of the court would have no more extended limitations. Surely such examples do not encourage us to leave the intent of a law to the mere opinion of the judiciary.

#### When Judges Become Legislators

THE Senate Committee on Interstate Commerce, created "The committee has full confidence in the integrity, intelligence and patriotism of the Supreme Court of the United States; but it is unwilling to repose in that court or any other court the vast and undefined power it must exercise in the administration of the statute under the rule it has promulgated. It substitutes the court in the place of Congress, for whenever the rule is invoked the court

"It is inconceivable that in a country governed by a written Constitution and statute law the courts can be permitted to test each restraint of trade by the economic standards which the individual members of the court may happen to approve. . . . It may be that the Supreme Court will be so enlightened and so alert that its opinion respecting what is due and what is undue restraint of trade will be in harmony with an awakened public conscience and a disinterested public judgment; but to fashion our conduct on that hypothesis is to repudiate the fundamental principles of representative government."

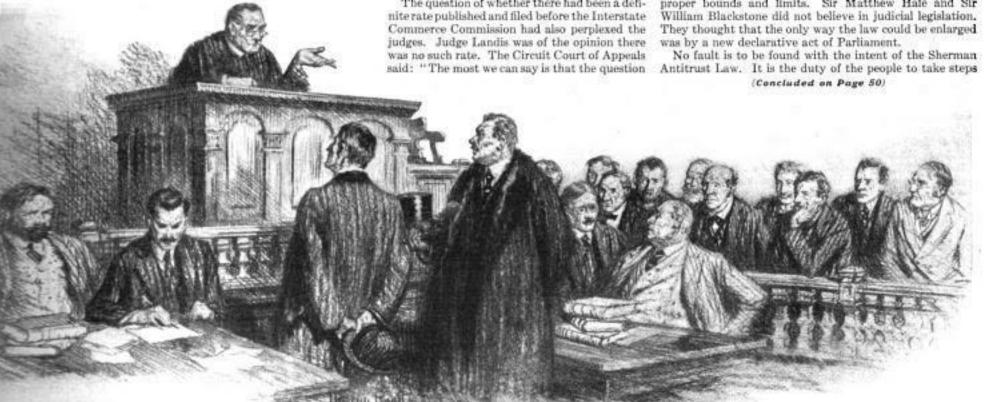

does not administer the law but makes the law.

It is no reflection on our courts to insist that they restrict their functions to an administration of the law. The electorate will never be content to permit the courts to legislate for it-to make laws for it. It will never permit the judges to sit as censors, to say how the business of the country shall be conducted, what are good and what are bad trusts, who shall be permitted to indulge in restraints of trade and monopolies, and who shall be refused those desirable privileges.

One may object to this and yet believe that the judges are our most conscientious public servants. He may object to it and yet believe that there is virtue in the bench to make a man more upright than his fellows. We know that a great trust has sometimes made even a doubtful person honorable. A cutpurse once made a very good Chief Justice of England. True, he one day got a rather startling idea of rewards. Hearing that one of his old companions was in jail, he called on him and asked what had become of the rest of the gang; to which the prisoner answered:

"Alas! They were all hanged except myself and your lordship!"

Sir Matthew Hale considered that Parliament had acted with the greatest wisdom in keeping the judges within proper bounds and limits. Sir Matthew Hale and Sir was by a new declarative act of Parliament.

## BANTRY By ELMORE ELLIOTT PEAKE

T WAS finally decided, in solemn family conclave, to let Foster hastily out of bed, and he hobbled over to the him go to see the circus come in.
"Thank you, father!" said the boy tremulously.

"Thank you, mother! I'll bring in two big armloads of wood so there'll be plenty to get breakfast with." And he vanished.

"He'll probably oversleep anyhow," remarked the Reverend Mr. Pettigrew.

"Would it be just the square thing, Homer, to let him oversleep?" asked Alicia Pettigrew. There was an edge to her voice which made her husband's bushy black eyebrows con-tract in displeasure.

"I can't see that our permission to let him go obligates us to make sure that he does go," he answered in his sonorous, didactic, pulpit tone. "However, do as you please. The incident has already occupied too much of my time." Whereupon he again opened the Homiletic Review to an essay on the Copartnership of Man with God, written by himself and now under perusal for the third time.

A couple of minutes later Foster, having finished his chores with

sleight-of-hand dispatch, scrambled over the board fence in the back yard, crossed the alley, and cautiously approached the rear of a shanty which exhaled the odor of ancient soapsuds. He approached cautiously, because it was the home of a drunkard and he was afraid of drunkards.

"Come on. Dad ain't home," called Stub Hatch, pausing in the ignominious task of filling a couple of tubs from a minbarrel at the corner of the house.

"I can go, Stub!" cried Foster exultantly. "And I got a fishin' line, too, to tie round my big toe and hang out of the window, like you said."

"I guess you better not count on me," remarked Stub gloomily. "I gotta fill these two tubs and then go clean up to Tallman's fer a wash, and I'll probably be so tired I'll

oversleep in the morning."
"Why, I'll fill the tubs," volunteered the innocent Foster. Stub affected hesitancy, and spat dark-brownishly.

'All right; but don't waste none or maw'll bawl me out for it. She's down to Carmichaels' for soap. Old Hobbs won't tick her no more. Try and git through before she gits back. If you do I wisht you'd bring in a scuttle of coal. I wouldn't ast you, but I spraint my wrist to-day."

Again he spat. Foster tried to ignore the dark-brown, for Stub had joined his Sunday-school class two weeks before and signed the pledge, which included tobacco. It was better to think of Stub's good points, for here was a boy who was not afraid of his drunken father, who knew the best catfish holes in Haymeadow Creek, could outskate and outwrestle any boy in the neighborhood, went barefoot from April to October, slept away from home whenever he chose—often with tramps, so he said—and owned collections of birds' eggs, stamps, marbles and tobacco tags that even boys whose fathers were rich had to envy.

Indeed, in Stub's presence Foster always felt his own limitations keenly. In the first place his father was a preacher. Secondly, he had been named for a bishop. There seemed small chance for a boy named after a bishop. Nobody ever thought of calling him Chick or Skinny or Red or Shorty in the spirit that Stub was called Stub. Preachers who came to the parsonage for dinner, when had to stop over between trains, always said with a hand on his head: "Ah, Foster! After our beloved bishop! I hope you may tread in the footsteps of that great man."

For a glorious period, it is true, he had expanded under the diminutive of "Foss" among the boys. But, alas, two Sundays later he learned at church that Foss was the name of still another bishop. He locked the secret in his breast, but all the romance, all the dayhad forever been squeezed out of "Foss," at languished and died. As for "Fossie," it like Flossie.

The objects in his visibility when a v

ng into ghostly ashline brought

The Other Boys, Tasting the Bitter Aloes of Envy, Tramped in the Dusty Weeds

backstairs, paused briefly at the cooky jar in the pantry and joined Stub outside.

A robin was already caroling in the big sugar maple by the well, but the boys, visioning lions and tigers and elephants, heard it not, and pattered off in their bare feet for the railroad yard. At the first corner they happened upon a third boy; at the next, upon a fourth and a fifth; and before they reached the yards there was a dozen in the squad.

"We'll give 'em the slip as soon as we kin," whispered Stub cunningly. "Them circus fellers won't let a bunch like this come close enough to see nothin'."

The circus, they found, had already pulled in; but their disappointment was mitigated by the fact that no activity was yet afoot. The big yellow cars splashed with red loomed like a dream city. The roustabouts, rolled in tarpaulins under the wagons on the flats, still slept. The curtains of the sleepers were still tightly drawn.

But soon all was changed. A man in shirtsleeves and battered derby hat stiffly descended the steps of the foremost sleeper and sounded a watchman's rattle. The roustabouts, yawning and stretching, came to a sitting posture; and in an amazingly short time horses and ponies were pouring out of the cars; wagons, cages, chariots and the steam calliope were shunted down inclines; and half the elephants were on the ground before Foster and Stub had discovered their whereabouts.

Elephants were a passion with Foster. His schoolteacher, the day before, had given a little talk on them, explaining the difference between the Asiatic and the African species. Foster remembered that the Africans had much larger ears, rougher trunks, three toes on the hindfeet instead of four and a bulging instead of a concave forehead. He even remembered their Latin names-Elephas asiaticus and Elephas africanus. But he spoke nothing of this to his companions. Though a remarkably innocent boy, with the delicacy of a girl and the imagination of a poet, he had gathered some worldly lore. He had learned, for one thing, that all boys despise a superior boy.

He discovered, to his surprise, that all the elephants in the herd were Asiatics and their mahouts dark-skinned Orientals, with tiny, silky mustaches, glean fluffy turbans and baggy trousers. Even Maharajah, the big bull that had risked his life to save his baby from a locomotive—according to the billboards—was an Asiatic. Foster studied him with awe. He did not look like a fond parent. His little eyes twinkled wickedly; he swung his great trunk restlessly to and fro as if seeking that which he might destroy; and his mahout, bawling a strange lingo,

incessantly pulled and prodded him with a goad.
"What do you keep punchin' him for?" Foster finally mustered courage to ask.

"Because he is an old devil," answered the Bengalese, "Do not come too near or God Himself cannot save you. He has already kill one thousand boys, and he will kill a thousand more before

Foster, the credulous, was skeptical for once. Still he fell back a yard. At the same time he said: "No clephunt will hurt me."

He spoke so quietly, with such dignity and assurance, that the mahout looked at him curiously. "Why, little sahib?"

Foster did not know why. He had spoken, as was his habit, like one in a dream. Indeed, at that moment he was dreaming that he was the greatest mahout in the world, just as he had often dreamed, with wide open eyes, that he was the greatest seacaptain, the greatest locomotive engineer. the greatest aëroplanist in the world.

"Come nearer then, little sahib, if you are not afraid," continued the man, smiling. "Lay your hand upon him."

Even Homer Pettigrew's steady heart would have throbbed

with pride could he have envisaged his son's soul at that instant; for Foster, impelled by a mysterious impulse that took no account of fear—for he was afraid—did step forward.

"Steady, Maharajah, steady!" said he, though his voice was not quite steady.

The great beast extended his trunk and lifted the boy to the top of his head. Makunda Das, mumbling some kind of an incantation, weaved his long, slim brown hands to and fro with a snaky motion; and it was in this fashion that Foster rode to the circus grounds a mile away, looking straight ahead, like the picture of Pompey entering Rome, while the other boys, tasting the bitter aloes of envy, tramped along in the dusty roadside weeds.

At the grounds a few of the pachyderms were impressed to butt wagons into position and help raise the "big top"; but most of them, including Maharajah, were staked off to one side, where they were served a breakfast of baled hay by their dusky attendants. The other boys were soon attracted elsewhere, but Foster remained with his beloved elephants.

Presently a white man appeared, smoking a cigarette. His hands and shirt were very dirty, he wore no suspenders, and his trousers sagged so low over his hips that Foster momentarily feared a disastrous slide. But the way that man handled elephants, kicking them about like bales of excelsior, without a goad, was a marvel. And the way he cursed the Bengalese about, though there seemed no occasion for cursing, was fairly hair-raising.

Suddenly he turned his attention to Foster. "See that bar'l, kiddo? Take them two buckets and go over to Aust Molly's yonder for water. When the bar'l's full you get a free ticket to the show this afternoon. Savvy?"

"Yes, sir," answered the boy. A free ticket was of no use to him. He never had attended a circus and never expected to. He had never even asked to, for his father believed that circuses were the devil's own device, and had said so from the pulpit only the Sunday before. Hence when he picked up the dinar canvas buckets, it was not a free ticket but Service that he was thinking of. Service, always with a capital S, was thing of which he heard a great deal, both at home and st church. And it was now indeed a privilege to him to carry water to the great beasts which he had such a curious affection for; which so inflamed his imagination, transporting him in spirit to that strange land where the misionaries went; that land of terrible jungles, in which the tiger and the cobra made their lairs; where women cast their babes into the Ganges, or flung themselves upon their husbands' funeral piles.

Yet as he trudged back and forth, back and forth between Aunt Molly's and the herd; as the dew dried from the grass and dust began to fly; as the sun grew hot, his area tired, his hands blistered, the hope was presently born that If he earned a ticket his father might let him use it. At and it was a very tiny thing; yet it waxed rapidly in greegth and size, and ere long it had become a Belief.

But that barrel! It was not a particularly large barrel to look at. The first two bucketfuls made quite a showing in the bottom. When it was a third full he was still fresh. At the half, though weary, his determination was still strong. But after that the waterline crept up at a snail's pace, until it seemed as if the barrel must have some subterranean

Then Aunt Molly-he didn't believe that to be her real name-came out and told him sharply that she couldn't pure any more water. She added more gently-perhaps after a second glance at his drooping figure and flaming face, all streaked with sweat and dust: "Besides, you're too little for such work. Why don't some of those lazy rires men carry the water?"

"Oh, they aren't lazy, ma'am," said be loyally. "They're looking after the animals and tents and getting ready for the parade."

Houses here in the outskirts were scattering. The next well was almost a block farther off, or two blocks to the sound trip. They told heavily on him, and after six round trips the barrel loomed as big as a hogshead, and swallowed his last load like the contents of a pint cup.

Then a tragic thing happened.

He was resting in the shade of a ticket wagon when a here-legged, lean-shanked mahout approached the barrel, dipped out two candy-bucketfuls of water and carried them to an elephant.

Foster was no crybaby. He had been taught that all the vicissitudes of life are sent by God for a good purpose, and are, therefore, blessings in disguise, to rebel against which is ingratitude. But he was deathly tired, his temples throbbed and his palms burned like fire. So he burst into

"What's the matter now, huh?" presently demanded the man with the precariously clinging trousers, as he lit a resh cigarette and emitted two white jets of smoke from his nose. "Quit the job, huh?"

"I can't ever fill the barrel, sir, if they keep dippin' out," asswered the lad.

"You're seein' things, kiddo. Nobody's dippin' out." "Yes, they are, sir. A Hindu man dipped out two big

nckets and watered one of the elephunts." The man grinned. "Well, well! I'll see he don't do it

again," he promised, with a wink at a spectator. hastle up! And remember: the bar'l full or no ticket. If you don't want the job -

He broke off abruptly at sight of a second spectator, a little man with sharp, black eyes, dressed in a neat gray mit and a broad-brimmed gray hat.

"Did this man promise you a ticket for filling that barrel?" he asked of Foster. "Yes, sir."

"Up to your old tricks again, eh!" exclaimed the little man, and the cursing he then gave the cigarette man made the latter's cursing of the Bengalese seem a very tame affair bised. Foster shivered for the little man's safety, but oldly enough the cigarette man shuffled off without a

word. Then the little man drew something like a check book from his pocket, signed his name, tore out a leaf and handed it to Foster.

"Here's your pass, my boy-good for this afternoon only. Now go over to that barrel and souse your head and keep in the shade awhile. You look hot. I've got a boy about your age back home, and I know what's good for boys that are hot."

Foster, thanking him eagerly, obeyed instructions, though the period spent in the shade was the very shortest reconcilable with his conscience. Then, without waiting for the parade to form, he made a beeline for home, the precious pass in his hand, his hand in his pocket, and his pocket pressed against his thigh.

His mother was in the kitchen, paring potatoes for dinner. He told his story. If she perceived its pathos it was through maternal divination, not any art of his; and when he finished and asked falteringly if she thought he might go to the circus, she arose and dried her hands and said in a peculiarly quiet tone: "Wait here. I'll go up to your father's study and talk to him."

This was unusual, for the first rule of the household was that Homer Pettigrew should not be interrupted during the morning hours except for urgent matters.

His mother was gone a long time, and when she came back she entered the kitchen softly and said in the same strangely quiet tone, with a stiffness about the lips that made him wonder: "Your father will tell you himself at dinnertime."

When the family was seated at the table Pettigrew returned thanks for the food, unfolded his napkin, stuck it in his collar, carved the pot roast and served the plates. Foster had an empty feeling inside, but it was not the emptiness of hunger, in spite of no breakfast. However, at the parsonage you either ate or you left the table-if you were little; and as leaving the table was not to be thought of until his momentous question had been answered, Foster picked up his knife and fork without daring to glance at his father.

"Foster," said the latter at last, "your mother has related your experience to me. In giving you permission to see the circus come in I did not contemplate your going to the grounds. But doubtless you misunderstood me or you would not have gone. Now I have only this to say: believe circuses are wrong. I preach against them; I advise my parishioners to keep their children away from them. Naturally I have kept you from them, and should under ordinary circumstances, as a matter of course, forbid your going to this one."

He paused and drank a glass of water. He drank a great deal of water-the only beverage, he was fond of saying, when asking for a third or fourth glass out at dinners, which God had made for man. Meanwhile, Foster's heart

began to race.
"The present circumstances," continued his father, "are not ordinary. You have earned a ticket. I hope I understand something of what that means to you, so I am going to let you do as you please. I am going to put the matter up to your conscience. You know my views. You know that I am older and wiser than you. You are old

All That Drowsy Jane Afternoon Foster Jat on a Josp. Box, Jober Faced But Tearless

enough to understand, in part, at least, the embarrassment which your going would put upon me and your mother. And that is all I have to say."

Foster, with his eyes upon his plate, swallowed a bite of bread that all but choked him. There seemed to be not room enough for it and the lump in his throat at the same time. He thought of the Ledbetters, who had subscribed more money for the new Methodist church than any other family. He thought of Eddie Preston, the Presbyterian minister's son. He thought of lots of other people who always went to circuses. But he did not speak his thoughts; he had been taught not to argue with his father. What he did do was to rise with a white face, quite suddenly, run toward the kitchen, and from the door call back:

"I want to go, father, but I won't go. And I don't want you to say you're glad, or praise me, or ever speak of it again." With which he fled.

Homer Pettigrew leaped from his chair with a black brow. "No!" said Alicia, with flashing eyes, placing herself between him and the door. "You took your fling at him first about having no more to say."

All that drowsy June afternoon Foster sat on a soap-box under the maple, sober-faced but tearless. The street was very quiet; not a boy passed. Bumblebees droned in the hollyhocks. A brood of young orioles overhead incessantly voiced their querulous, monotonous cries. Ever and anon there floated to his ears, at the caprice of the shifting

zephyrs, a strain of band music from the circus tent, softened and etherealized by distance till one could almost imagine it the strumming of angels upon their golden harps. And at the bay window sat his mother, sewing-when the needle-point was not blurred through tears.

About six o'clock Stub Hatch hopped over the back fence, crunching an apple. "Got' the show?" he asked briskly.

"Father wouldn't let me," answered Foster truthfully.

"Gee, it was fine! I'm goin' agin to-night, Then I'm goin' to see 'em load up. They've got some new cars for the elephunts, and I heard one of the circus fellers say mebbe the elephunts wouldn't go into 'em, 'count of the smell of paint, and would have to be drug in with a rope. Mebbe your dad would let you go to that."

No, he wouldn't," said Foster bitterly; and he did not even resent Stub's contemptuous "Geeminy crickets, what a piker!"

On account of his early rising Foster was sent to bed at eight o'clock. But he could not sleep. The circus band music was even plainer than in the afternoon, and his restless mind, aided by the billboards, pictured the dazzling spectacle, scene by scene.

Then suddenly, for the first time in his life, he resolved to deceive his parents; to see the loading of the circus.

He counted the clock strokes, and almost before the last, deliberate, mellow tones of ten had died away he was into his clothes and out on the porch roof. Sliding down the corner post was but the repetition of a familiar feat, and five minutes later he reached 11 (Concluded on Page

He Turned the Corner, Thinking His Unwieldy Pursuers Might Skid

## THE ARGONAUTS

### Sonny-By George A. Birmingham

ILLUSTRATED BY HENRY RALEIGH

T WAS late in November and it had been raining without cessation for more than three weeks—not vigorously, as I have seen it rain in New York and Philadelphia, but with a dull persistence, as it rains nowhere else except in the west of Ireland. Rain there seems—at certain, indeed at most seasons of the year-to be the normal thing, as if the genius that presides over the weather had turned on rain and then gone to sleep. The country was saturated and I, though well inured to the climate of Connaught, felt that the pervading damp was getting on my nerves. I was dry in bed at night-I did not seem to be dry anywhere else. I confess that my temper was bad.

John Cassidy met me on the road a mile from my house at four o'clock one afternoon. He was standing at the bottom of a muddy lane that leads up to the wretchedly poor cabin in which he lives. I realized at once that he was

waiting for me. I sighed. John Cassidy is an excellent fellow-what we call a decent poor man—and I would do a good deal for him; but I did not want to do anything for him just then. I wanted to get home and change my sodden clothes. I had been tramping through the rain all day. I wanted hot tea. I wanted tobacco. I wanted a deep chair in front of a fire.

John Cassidy also wanted something—something from

me. Therefore I sighed.
"I'd be glad," he said, "if your reverence would step up and take a look at herself-and maybe say a word to her that would do her good."

Herself was, of course, Mrs. Cassidy. It is in this way that we speak of our wives in the west of Ireland. It is, I think, a beautiful and respectful way of speaking of them. The use of the pronoun in this absolute fashion suggests that for each of us there is no other woman in the world, but only the one; and that is as it should be.

"There's a kind of weakness on her," said John Cassidy; "and it's worse she's getting instead of better."

I grasped at a ray of hope. I am, after all, a clergymannot a doctor. A weakness is a physical rather than a spiritual malady. I could scarcely be expected to cure her. "Why don't you get the doctor if she's ill?" I asked.

I was standing in a pool of water, but that made very little difference to me. My boots had been soaked through

for hours.
"I had the doctor," said Cassidy. "I had him four times and I paid him twice, and it's very little good he

Doctors are not of much use if you take them off the beaten track. In the face of a recognized disease measles, pneumonia or appendicitis, something they can look up in a book-they make some kind of fight. When they come up against anything as vague and formless as a weakness they can very rarely

do anything.

"He gave her a bottle, I suppose," I said bitterly,
In Ireland we describe every

medicine as a bottle-and we are beginning to lose faith in

"For all the good it did her," said Cassidy, "it might as well have been water that was in it: though I will say for that bottle it smelt powerful bad when you took the cork out

"I don't see," I said, "that I'm likely to be of much use."
"It could be," said Cassidy,

"that if your reverence was to speak a word to her it might comfort her."

This was, of course, possible. I followed John Cassidy up the lane.

On the way to the cabin he explained more fully the nature of the weakness.

"It's been coming on her," he said, "ever since the young lad went from us. Two years a 30 he took the notion into his hend that he'd go to Americaand he went."

I knew that. We had all discussed the departure of the Cassidys' son; but he had been gone two years and I had

"My Mather Jays Will Your Reverence Step Up to the House for a Minute?"

seen Mrs. Cassidy many times since. She seemed none the worse. Cassidy read my thoughts with that uncanny intuition which you often find among west-of-Ireland peasants.

"At the first go off," he said, "you wouldn't have thought she minded-no more than another would anyway; but the weakness was within, in the inside of her, and it's lately that it has begun to come out."

I listened to a list of symptoms. It seemed that Mrs. Cassidy had lost heart and no longer took any pleasure in life. She baked bread; she washed clothes; she fed the

pig—but she did these things without zest.

"It's seldom ever I can get her to go as far as the town on a market day," said Cassidy; "and she doesn't care if she never saw a neighbor woman or heard a word of what's

"You couldn't get her to put a shawl over her head and go as far as the road—not if you was to offer her a fistful of gold for doing it."

This was plainly an evil case; but it seemed scarcely likely that my words would charm away so lethal an apathy.
"You'd think now," said Cassidy, "that she was so

more than able just to put the one foot in front of the

He whispered these words in my ear, for we had reached the door of the cottage and it stood open. I went in and Cassidy followed me.

Mrs. Cassidy was sitting on a stool in the chimney corner, crouching over a fire that had burned low. There was a great round pot at her feet, with glowing cinders underneath it and gray, ash-covered coals piled on its lid. In such pots the west-of-Ireland people bake their bread, and Mrs. Cassidy, no doubt, had a loaf in hers; but she was not watching her pot.

I got accustomed to the gloom of the house and I could see that her eyes were fixed on something beyond the pot, beyond the chimney corner and beyond the house itself. They had a long, sorrowful look in them. For a while she seemed unconscious that we were in the room with her. Her husband roused her.

"Do you not see," he said, "that his reverence is here? Will you not give him a chair the way he'll be able to take an air of the fire? He's wet through, so he is."

Mrs. Cassidy's courtesy overcame the weakness that was on her. She stood up and bowed to me with that air of quiet, unassertive dignity which the west-of-Ireland peasant possesses in common with the best-bred members of the English aristocracy. Neither squalor, on the one hand, nor the surroundings of the smart set, on the other, can rob a woman of this great-lady manner if it is born

Having bowed, Mrs. Cassidy drew forward a chair and wiped the seat of it with her apron.

'It's pleased I am to see your reverence," she said, either now or at any other time."

I sat down. John Cassidy gave me a meaning glance, and then said he was going out to see whether the young heifer had broken down the wall which separated her field from the potato patch. It is, I know, the habit of young heifers to break walls. The young of all species do it. I have heard of young girls—but their doings are no concern

of mine. They may break all the walls of all the conventions

without interference from me. Nor do I think that John Cassidy cared much whether his heifer had broken her wall or not. The potatoes had long since been dug. The ground it which they grew would suffe no harm by the incursions of a young heifer. He was making an excuse to escape, so that I should be left alone to speak to Mrs. Cassidy the word which might do her good and help to remove the weakness that we on her.

For some time Mrs. Cassity and I sat in silence, one on each side of the fire. I looked at he and noted a slovenliness in her attire that was new tome. She used to be a neat, trim woman. even when she was going about the business of cleaning ber house and feeding her pig-

I noticed that the hers wandered unchecked about the floor of the room. They pecked and scratched among the asia on the hearth. They sprang up on the dresser, where place and jugs stood in rows. They were free with all that was it the house. This was not Mr. Cassidy's way with hers. In the old days an intruding issi,

unless it were a chicken in delicate health, was ruthlessly driven from the door. Now Mrs. Cassidy was apathetic.

It is only very good friends who can sit opposite each other without speaking. Silence is usually embarrassing to civilized people. I confess that our long silence began to embarrass me and it came as a relief when Mrs. Cassidy began to speak. Her words fell from her slowly and scarcely seemed to be addressed to me. It was rather as if she spoke a monologue, telling to the brooding spirit of her home the tale of her sorrow.

"It was three years ago that the fancy first took him. Before that he was always contented enough."

I knew she was speaking about her boy-her son,

who had gone to America. "His name," she added, "was Michael Antony; but it was Sonny we called him."

I waited, for I had nothing to say. There are scores of these sonnies, whose names are really something else. The mother love that cleaves to the pet name is the same for all of them; so is the heartbreak for the mother.

"I don't rightly know," she vent on, "how the notion of America came to him first. You'd think he was contented enough. It wasn't that his father was hard on him. The lad had no more to do than what he seemed willing for. He had a decent suit of clothes to wear of a Sunday or a fair day, and nobody denied him his share of any pleasuring there might be in it—the like of a football kicking, or maybe a dance at an odd time; but the notion took him and nothing would do him only to go to America. I was against it and so was his father."

Mrs. Cassidy relapsed into silence again. She seemed to have forgotten my presence altogether. Then suddenly she looked at me and added a word of explanation-a pathetically unnecessary word.

"His name was Michael Antony, but it was Sonny we did be calling him. Well," she went on, "nothing would do him but to write to his Aunt Matilda, who's out in Pittsburgh and married to a man that went from this parish. I never seen her myself, but she was his father's sister. Sonny was always a good scholar and

he was well fit to write a letter to his aunt or to any other one. We kept him to his schooling regular, only when there might be a press of work at the hay or the like of that, so as he'd be wanted at home. It was always his father's wish and my own that he'd get good learning while he couldand he got it. There wasn't a better speller than Sonny; and the way he'd write, a blind man could have read it!

The half door of the cottage was opened and two girls came in. I looked round and recognized the Cassidys' little daughters, children of twelve and fourteen years of age, with school satchels over their arms.

"Norah Kate," said Mrs. Cassidy, "your dinner's waiting for you and Susan's along with it. Will you sit

down now and eat it? And, before you do, let Susy hoosh the hens out of the house. It's too bold those same hens is getting."

The children did as they were bidden, without speaking. Doubtless they shouted and laughed elsewhere, in the school playground or on the roadside. Here at home they were silent. It may have been my presence that awed them; but I think that even the merriest child would have found it hard to laugh in the house where Mrs. Cassidy ceaselessly mourned for Sonny, whose real name was Michael Antony.

When Mrs. Cassidy spoke again the hens had been driven forth and the two girls were sitting at the table,

with a bowl of boiled potatoes between them.

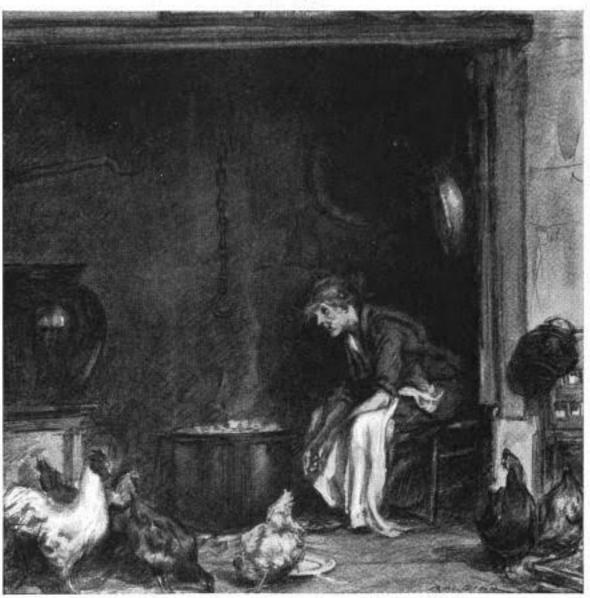

"It was a month, or maybe a little more, before the answer came back from his aunt; but when it did come I was glad to see it. What she said was that it would be no use for Michael Antony-his name was Michael Antony, though it was Sonny we always called him-that it would be no use for him to go to America. The times was bad out there, she said, and little likelihood of their getting better. Let the boy stay where he is, she said, where he has a living to get without working the flesh off his bones. Let him not go there, she said, or else he'd be sorry for it after. Well, you'd think that would have contented him and put the notion of America out of his headand so it did seemingly."

The hens, grown bold by long impunity, had made their way into the house again; but Mrs. Cassidy was roused now.

"Norah Kate," she said, "will you and Susy put them hens out and yourselves along with the hens! Don't you see I'm talking to his reverence?"

Mrs. Cassidy, like most good women, had small respect for her daughters. Sonny, I imagine-had Sonny remained at home-might have sat out the visit of a bishop. His mother would have considered his presence an honor to the highest ecclesiastic; but daughters, even though their fathers spoil them, never stand so high as sons in the opinion of a good mother. Norah Kate

I Could Jee That Her Eyes Were Fixed on Jomething Beyond the Pot .

## WITH THE DANCE

By Mary Stewart Cutting

OU must get your husband to join the class! The Watkinses are going to give a ball next month when they come back from the Coast; so we'll have to learn to dance before that. If you don't dance nowadays

you're out of everything!" Mrs. Roberts spoke winningly. She shared the usual anxiety of the promoter of any suburban scheme; the more subscribers you got the less was the individual toll.

"Well, I don't know," said Mrs. Chandor doubtfully. Her graceful head, with its ripply brown hair, drooped a little on one side; her clear blue eyes fastened themselves on the large marblelike orbs of the fashionably attired visitor. "I'd love to join, myself; but I've been trying for the last six months to get Preston to learn and he just simply refuses to. He says he's too old to begin again, with s boy nearly fourteen! But he never cared much for dancing anyway, and after what he saw over at Wickham ast summer ——" Mrs. Chandor paused expressively.

Mrs. Roberts' face flushed.
"Too old! Why, Mr. Brentwood is more enthusiastic han anybody, and he's a grandfather! But I don't thinkto you?-that people-that is, really nice people-talk nuch about age any more. And these dances are so differmt from the waltz and two-step, which were so tiring."

She caught herself up deftly, and then continued: "I lon't mean by this that they're at all like the kind of thing

they have at Wickham; we all know what that set is! No; when the new dances are taught properly they're a very different thing. - Little Emma Prankly, whom we have

engaged to teach us, is the dearest creature; so inspiring! You were saying a moment ago that Mr. Chandor was too tired when he came home at night-that's the very reason he should join the class. Emma Prankly says she teaches more tired-out business men than any others; the tonic effects are wonderful. Doctor Sayres himself told me the other day that if he could run in for an hour of dancing after a day of operations, and work off the strain, it would make a new man of him. I have insisted that my husband should join just on account of his liver; he's so pessimistic lately-business is so bad-that I can hardly stay in the same house with him!"

She paused, and then went on again:

"It's strange how husbands and wives differ on the subject! Now at the Iversons' it's Leslie who's crazy over dancing. Winifred says he tangoes even while he's dressing. She feels that she can't take on another thing, what with little Matilda and the house, and changing servants, and the consumers' league, and all that interminable suffrage telephoning every evening. As she says, Leslie has only his business and his golf to think about. Life seems so simple for a man, doesn't it, in comparison with what it is for a woman? I said to her: 'Winifred, you

need relaxation!' Now do think of the ball and get Mr. Chandor to join! You know you can if you want to." 'Oh, I'll try!" said Elinor.

It was the received cult among the married that you could always get a husband to do anything if you set your mind to it, with the suppression of that other fact that such success, when it did occur, was often more lamentable in its effects than failure. There is no sadder thing than a man forced unwillingly to his amusement.

If she could only get Preston to think that he wanted to

He was such a dear usually about doing what she wished, but when he became inert he had a sort of masculine ponderosity that made it almost impossible to move him. Yet, if he did not give in to the new order of things it was sadly true that they would be out of everything.

The town was steadily growing to be dancing-mad, not only as regarded the younger set, who were by right votaries of the art, but among the middle-aged, the heavyweights, people who had long been relegated to the seats along the wall, and who were now happily taking advantage of the door that opportunity, even at this late day, held open for them. The Bannards and a small party, penetrating with a sense of reckless gayety into a dancing restaurant in town one evening to watch the show, had been quite taken aback by the number of solid elderly husbands and wives disporting themselves earnestly on the floor.

"Well, of course, when you think of it, I suppose they're never invited anywhere to dance," Lucia Bannard had stated; "so this is the only chance they get!"

There was, indeed, one young man and woman who seemed to be performing rather extraordinarily, with immense acrobatic muscle; but even they had soon stopped at a quiet signal from the proprietor. It was felt disappointedly that the gayety of the scene had been overrated; with, however, the saving thought that it was probably quite different at a later hour.

At home there were the elder Iversons, equally grandparents with Mr. Brentwood, though none of them was at all venerable. Mr. Iverson, a semi-invalid for years, had become an ardent devotee of the cult;

while his wife, delicately dignified, performed with delightful grace. When eighteen-year-old Tommy Atmore came home from college for the holidays, and it was whispered that he could dance the Bird Boomerang, or some such matter, all his mother's friends vied for his presence at their afternoon teas,

coaxing him to give them lessons.

Even old Mrs. Crandall, who every one thought would be shocked, though she did not dance, benignly sought with her wrinkled fingers to fit the strains of Money Musk, the Blue Bells of Scotland and the limp and ancient Shells of Ocean Waltz to the exigencies of the new steps, until in self-defense her daughter-in-law procured a phonograph. It had come to that pass, indeed, that every gathering, whether it began as luncheon, tea, dinner or bridge party, turned into dance practice before it was ended, though no two people danced the same way.

The very lilt of the music, the bizarre ragtime and its gay kin that wouldn't let your feet keep still, had something inspiring that swept one out of the realm of orders to the butcher, and bills, and defective plumbing, and the long, sordid business day, and the monotonous round of suburban living; it gave a lift to the morrow. It was time, indeed, for Emma Prankly's competent instruction and for Preston

Chandor to take lessons.

Elinor made up her mind to have it out with him that evening. She was one of those rare women who can differ from a man without being antagonistic; she seemed rather to wish to be convinced by him. She dressed herself with unusual care in a blue gown that he always liked, with a neckpiece of lacy white at her slender bare throat; she had always a characteristic daintiness that satisfied both the eye and the sense. Yet it had seemed to her sometimes lately as though her husband was getting into a habit of not quite seeing her; of just taking her satisfactory appearance comfortably for granted, without any fresh interest in the sight.

He himself, she noticed to-night as she looked at him thoughtfully, was getting a little heavier; his pleasant face was becoming somewhat set-he had an indescribable air of one growing wedded to the

solidities of life. It was when the children were in bed, after that racking study hour in which the helpful parent is reduced to pulp between the dictates of common sense and the Way the teacher says you must do it, that Elinor, as she was leaning against the arm of his chair, broached the subject of Miss Prankly.

Dancing lessons! Why should I take dancing lessons?" he queried carelessly, looking longingly at the book he held; he was deeply absorbed in everything Arctic.

"Everybody's doing it, Preston. If you once tried to

dance you'd be as crazy over it as the rest are.'

"All the more reason, then, why I shouldn't try; I don't want to be crazy over it. I'd a great deal rather sit here with a book and you, dear.'

"With a book and a pipe, you mean," she retorted gayly. "You don't know how much you're losing!"
"Well, if I don't know it I'm not missing anything, am

I? See here, Elinor, it's no use arguing with me about it. I don't care who else dances-let them if they want to; but I'm not going to learn. I don't like it." His worried gaze became fixed on something beyond her, while she smoothed his hand in hers. Mr. Chandor felt a restless repugnance to the subject hard to explain-a fierce repudiation of the charms of the dance, which seemed as though it might develop some uncanny spell of fascination over his unwilling spirit if he did not hold out against it. "I thought we finished with this last summer." His eyes plunged into hers. "If you want to join this racket, just say so. I don't want to stand in your way if you'd enjoy it. I'll take you to every house the class is held in, of course, and come for you any time you wish."

"No-o-o!" said his wife slowly.

The music called endearingly to her nimble feet—she would like to learn the steps correctly, but not without him. They had tacitly done things together, so far as possible, since that first year or two of their married life when he had been lured into a series of chess tournaments, with two or three friends, with an ardor that threatened to shipwreck their wedded happiness—not that he loved her less devotedly, but that he could not understand how the hours passed while at that too-fascinating game.

One of Elinor's most harrowing memories later was connected with the time when a rook was missing from his beloved chessmen, and she had to confess that she had given them to the baby to play with when he was fretful, though she positively knew she had put them all back again. They had both comfortably become devotees of bridge afterward, until this dancing era struck in.

"Of course I'd love it, but I don't care to go off evenings without you," she said with a tender pressure that he returned. "I'll just wait until you want to learn too. We can join at any time!" And she kissed him.

"You Can't Get Anybody to Sit Down Quietly for a Game, Now That This Duncing Crase is On"

She had planted the entering wedge anyway. She knew the matter was in his mind all that week; he showed her the little attentions that always manifested his thoughtfulness of her. On Thursday his long fingers unrolled from its wrappings a little green glass vase for flowers, which he had bought in a shop on his way out from town. On Saturday he brought that bunch of midwinter lilies of the valley, which almost meant more than any other gift to her, though his evenings were still exclusively devoted to the Polar regions; he was never interested in anything by halves. But on Monday night, when they were bestowed in their usual positions by the log fire, while the cold crackled at the window panes, he looked up occasionally from the pages with a strange expression to where she sat, with her work dropped from her hand, her lips parted, yearningly listening to the rollicking strains that intermittently reached them.

"Where does that music come from?" he asked.

She looked at him with her whole soul in the glance. "It's over at the Bannards'; they're having the dancing

class there. Doesn't it sound just lovely? "Oh, that's it, is it!"

Preston seemed to hesitate a moment; and then, still keeping one hand on the book, hitched his chair up close to hers, laying the other hand on her soft fingers as his fine eyes met hers tenderly.

Elinor's heart beat exultingly: her policy of silence and submission had been the right one, as she knew it would be; he could not help seeing how much she longed to be over there, and he never, never could really bear to deny her anything! How sweet he was anyway! How much nicer than any other man!

"Elinor

She waited blissfully: "Yes, dear."

He held her band a little closer.

"Now don't you think it's a-great-deal-better to be sitting here together comfortably than chasing round the floor like those idiots over there at the Bannards'? What have I said now! Where are you going? What under heavens is the matter?"

"I-I-I only have to go and get a spool of thread."

said Elinor in a muffled tone.

And, after all, what was the use of giving up hope yet! This was only the beginning. Let him get used to the idea.

THE defection of the favorite Chandors was a serious one in the little circle of intimate friends. It was not to be thought of that the two were to be no more one with the interests of the crowd. There was a tendency among the women to wonder that Elinor, dear as she was, had not more influence with her husband. Each had some instance

to relate wherein her Will or Edward might have proved as recalcitrant if she had not exerted her powers; but there was a general feeling that the unnatural situation should be brought to an end as soon as possible. The young and lightsome Mr. Bannard approached Preston on the subject when going into town.

"What's eating you, Chandor? Waiting to be pressed to join the class? If I were you I'd bring Elinor on Thursday and get into the game like a

little man.

"Would you?" asked Mr. Chandor sedately. Mr. Bannard's eye kindled reminiscently,

"We had a fine time last clip! You ought to have seen Roberts! He was working so over the tange that he actually forgot to go across to the club for his evening bracer. Miss Prankly's a great little teacher! I declare, though, I felt sorry for her struggling over Will Crandall.

"That fellow's all hoofs-awful! He's enough to break up the class. You could give him points any time, Chandor. And his wife is almost as but. She can't get the hang of anything—dances like m ice cart. I'll tell you, though, whom you want to spiel with if you have the chance, and that's Mrs.

Bantry." "Mrs. Bantry!" Preston's jaw dropped; his eyes stuck out in wonder. "Why, she must weigh over

two hundred!" "I don't care what she weighs; anybody who get her for a partner has a cinch. She's as light as a feather on her feet-believe me! She dances like 1 breeze; catches on to everything! All the men are crazy over her. She's not so bad looking, either, if

you come down to that." "Mrs. Bantry!" repeated Preston with a worder that had not lessened. She was a woman who heretofore, by some inexorable, unvoiced law, had been relegated entirely to the society of other women. No man ever spoke to her voluntarily, except in greating or farewell; even her husband was said to pass all his evenings at the lodge. Yet here she had come mysteriously into her own! Preston shook his best. "I don't get you, Donald," he said with finality.

However, the next evening, Saturday, the Paxtons and the Wilmers stopped in on their way to the "movies" to tell Mr. Chandor, with persuasive volubility. not to be so foolish, but to make up his mind to learn the

modern dance at once. Gentle Mrs. Iverson and kind, motherly Mrs. Brentwood on different occasions, coming out from town, sat down by him on purpose delicately to suggest how much it would make for his wife's happiness if he would only overcome his prejudice enough just to try the dance—everybody was sure he would like it if he did-while he politely listened and smiled, and was most courteous in all the little ways that women appreciate, but refused to commit himself.

Everywhere he was assailed by either argument or railery, except from those husbands whose wives begre them, as a duty, to speak to Mr. Chandor—an adjusting that invariably reduces sensitive man to complete slimate

on the mooted subject. Though he would not own it to himself, Preston could feel Elinor's clear blue eyes looking anxiously day by day for some expected change in him. Once he found her ing on a party gown and tiptoed out of the room unsect However, the climax to this state of things came of I Thursday following; Mr. Chandor, on reaching hour seemed to perceive the well-known signs of festivity in wife's attire.

"Anybody coming in to-night?" he asked casually-His wife looked at him without expression.

"Yes; the Bannards."

"I'll dress after dinner. I shall be glad to have a latauction once more. You can't get anybody to sit down quietly for a game, now that this dancing craze is or." "Yes," said his wife in the same tone as before.

Preston went round upstairs afterward whistling # 3 dressed, and her heart smote her; but even as he descent freshly shaven and radiant of mien, there was that persound of many people coming along outside, with swall

of skirts, tramping of feet, subdued voices, smothered laughter. When the bell rang Mr. Chandor, going to the door unwittingly, held it open to the icy air for a procession, doaked and hooded and overcoated over evening attire.

"We're taking you by storm, old fellow!" called Will Crandall, slapping his host on the shoulder.

"Got you now, Chandor! Got you now!"

"Bringing the mountain to Mohammed, you know," said elder Mr. Iverson, following up the chorus. "The the elder Mr. Iverson, following up the chorus. whole class, Miss Prankly and all! No excuse for you now; no excuse now! What do you say to this, Chandor?"

"Why, it's fine!" said Mr. Chandor, smiling. "Awfully glad to see you all. How do you do, Miss Prankly? How do you do, Mrs. Paxton? Hello, Paxton! Make yourself at home. Glad to see you and Donald, Lucia."

His greetings went all along the line as the guests swarmed in and were handed over to Elinor. Her glance, arge-eyed, sought his in the interim as she whispered;

"I hope you don't mind?"

"No, indeed!" he said, with what she always called his ompany smile, though she noticed afterward a peculiar

expression in his eye.

"I hear I'm to have the pleasure of teaching you this vening, Mr. Chandor," said Emma Prankly as they stood n the drawing room after the rugs and furniture had been emoved.

She was such a frail, palely smiling little person, and vith such tiny feet showing below her short white skirt, hat it seemed almost pathetic that she should have all hose big men to work over.

"Why, it would seem so," said Preston gallantly. "Been eaching much today, Miss Emma?"

"Since nine this morning."

"Since nine! You must be worn out. Why, I shouldn't

ave a leg to stand on!"

"Oh, I never get tired dancing!" said Miss Prankly rith professional sprightliness. "It stimulates and it oothes."

"Oh!" said Mr. Chandor, staring. "Well, start off with he others if you will, Miss Prankly, so that I may see how t's done, and leave me until later. Thank you!'

The tall, stolid-looking pianist, in a shirt waist and skirt hat looked as though carved from stone, was already at er place at the instrument, pounding away with long suscular fingers in startlingly marked rhythm. An air of xcitement and gayety pervaded everything. There was a udden rush of men toward the stout Mrs. Bantry. The comful of people resolved itself, with a few exceptions, ito plunging couples, slowly, advancingly pawing the round, with sudden unexpected turns and convolutions, hile Preston watched interestedly.

"Getting up your courage for the fatal plunge?" said lonald Bannard hardily, pausing for a moment by his host. Hello, Elinor! Feeling good to-night?'

"Yes, indeed!" returned Elinor.

"Doesn't Elinor look fine?" murmured Lucia. "She's happy, Preston, because you're actually going to be in all again. It's really been quite a deprivation to herour not being willing to learn. But, of course, that's all ver now.

"Oh, certainly, certainly," said Preston with a strained pression. "What is it, Mrs. Iverson? Thank you! It's ighty kind of you to be so pleased about it."

"And we're sure you'll be very graceful when you begin," id Mrs. Roberts winningly. "We'll all be watching you."

The music suddenly stopped short; the floor, which had been full of long-armed gentlemen rhythmically propelling ladies before them like perambulators, became emptied.

Miss Prankly, amid a buzz of conversation, clapped her hands for silence.

"I'll take the beginners now, Mr. Roberts! Miss Barker! Mr. Chandor! Mr. Chandor, if you'll come over and stand

A chorus arose:

"Chandor! Chandor! Chandor, it's your turn

"Certainly," said Mr. Chandor. He stepped forward and then stopped halfway across the room, slightly paling, as one struck with a sudden thought. "If you'll excuse me while I run down and look at the fur-

nace-just go on without me; I'll be back in a moment." "Where is Mr. Chandor?" some one asked vaguely half an hour later, in a pause of the music.

"Mrs. Chandor, where's Chander?" "Mrs. Chander, where's your husband?" "This isn't fair!"

"Why, he's still down in the cellar working over the furnace," said Elinor, appearing with a worried expression; there were lines between her eyes. "He says it was nearly out—in this weather, too, when everything might freeze! He's had to make a fresh fire and he says he doesn't dare leave it. Mr. Bantry is down there with him. They're sitting in front of the furnace smoking. He's so covered with ashes that he couldn't come up here again anyway. It really was out! It's so very unfortunate; but

She could almost hear how the incident was being commented on after the assemblage had left the house! She was secretly weeping all the time she was getting undressed. Yet, in spite of everything, she still hoped.

NEITHER she nor Preston said one word about the affair that night or the next morning, save that he briefly hoped the guests had enjoyed themselves. But the next night, being the last of the month, Mr. Chandor came home somewhat late. He kissed his waiting family sketchily, with no interest in the process; and, though the nightgowned Lucile flung her arms round his neck violently with her feet off the floor, he detached her only automatically. His face looked haggard; his brow was brooding.

"Have you had a hard day, dear?" his wife ventured

when they were alone. "Not especially."

"Oh! How is Mr. Trainor getting along?" Mr. Trainor was a valued bookkeeper, who had been home ill.

"He's doing very well, so far as I know."

Your tooth hasn't been troubling you, has

it, dear? This terrible weather is so trying!" "No; it hasn't been troubling me.

He had been standing up by the mantelpiece, but now he flung himself down suddenly into an armchair, looking at her with dark and harrowed gaze.

"I tell you I've had about enough of this dancing business, Elinor. It's all very well to be badgered at every tack and turn by the women-of course a man has to take that, and I hope I can stand any ordinary chaffing as well as the next one; but, after that racket you let me in for last night-I never felt like such a fool!-to have everybody to-day taking me to task for disappointing my wife-I call that a little too much! If there was anything that would drive me a thousand miles from the whole business it would be that."

"Yes; yes, indeed!" said Elinor.

Her blue eyes clouded; she put one arm round his neck as one who would defend him against the world, though he still held away from her as he went on:

"I'm sorry you are disappointed, Elinor; but -

"Oh, I'm not, really!"

"I'll do anything else on earth that you want, dear; but, for heaven's sake, call a halt on this. I'm worn out with it; it's got on my nerves!"

He let himself be drawn into the warm circle of her arms,

his eyes, however, still looking beyond her.

"No, no, dear; we won't say another word about it," she murmured soothingly. What did it all amount to anyway?

His gaze returned to her vaguely.
"I was talking to Kelmer to-day." Kelmer was the chess enthusiast of the past, with whom Preston still occasionally had a game at long intervals. "He wants me to come to his rooms to-morrow evening; I'll be out on an early train though. We think of getting up a three weeks' tournament with Brayton and Phillips. You don't mind, do you?"

Chess! Was that allure getting its fatal hold on him

again, after being so long driven away by the social charms of auction? For the life of her, Elinor could not put any warmth into her "No."

She got up and walked away from him; and he let her go, unknowing that she went, his mind already disporting itself clarifyingly among gambits.

The thought clouded everything for Elinor. She knew she was cross to the children and everybody the next day, with nothing to look forward to at the end of it and with a series of solitary evenings looming grimly ahead. But at eight o'clock the telephone rang. Lucia Bannard's voice hailed her:

"We want you to put on something and come with us to the dance at the clubhouse, over at the Ridge. Donald. says Preston stayed in town; so you're alone. . . . Goodness! You know perfectly well he'd want you to go. We're all going over in the Iversons' limousine. . . . Yes, you can. We'll be home before he gets back anyhow. . . . Oh, come on! Be a sport! . . . then; we'll stop for you in half an hour." Very well,

There was a delightful, excited scramble on Elinor's part in getting into her new low-necked light-blue chiffon, with the help of Ellen the maid; the children, excited too, were standing by as she bent a tall loop of white and spangles into a slender upstanding ornament for her lovely

She was bundled into her wraps in time to be helped down the slippery steps and into the festive car, which

## The Mutineer of the Mary Blownt

POR once anyway intuition proved truly prophetic. It seemed for a while as if Mr. Tuttle's boat would be the first to fasten to the whale; but Minch, his boatsteerer, a man of experience and cool judgment, put a little too much right hand into his throw, with the result that when the point of the harpoon struck the whale the weight of the great arm-thick oak pole from which, rather than from the brawn of the boatsteerer, it receives its impetus was not directly behind it, but turning forward upon it like a lever upon a fulcrum. The bright point dipped into the buttery blubber, and then twisted out with a noise like tearing wet paper. And the whale sounded—that is he stood solemnly upon his head, waving his tail that was twenty feet from tip to tip, and then went straight down without splash or commotion, much as an express elevator in a tall building drops from the seventeenth floor to the street.

From this fiasco two things resulted immediately: Eighteen men manning three lovely boats laughed and jeered till they were almost sick, while the six men manning the fourth boat maintained for a time a gloomy silence and then began to curse. That is, five of them did. The sixth was Mr. Minch himself, and he began to curse and explain.

Then the boats scattered, each being placed where in the judgment of its guiding spirit the whale was most likely to

An hour passed—an hour and fifteen minutes; then very suddenly Crandle, erect and preternaturally alert in the bow of the waist boat, yelled "Stern all!" at the top of his lungs, and as the boat shot backward, seized a harpoon from the rack and hurled it with all his force into a hill of shiny black that had risen, you may say, almost in his face.

And then there happened a thing almost unique in whale fishing. In the whale's mind astonishment at being so suddenly hurt, just when he expected to enjoy himself, seemed to predominate over pain. In nine hundred and ninety-nine cases out of a thousand he would have bolted, run off with several hundred fathoms of line and given the men in the boat a ride to which even a first ascent in an aëroplane would seem tedious and uneventful, and all this and much more besides before there would have been even a ghost of a show to kill

him. On the present occasion the whale remained without motion for perhaps a minute. During that minute Crandle-though this was really the fourth mate's prerogative-reached for a lance and drove it into the whale's vitals.

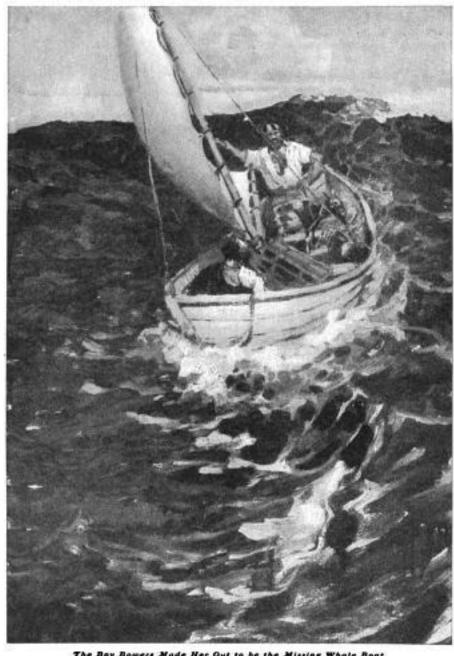

The lance with which whales were killed before the invention of tonite bombs is an appalling weapon. The cutting end, certainly as sharp as a dull razor, is shaped like a lilac leaf. It is on the end of a shaft of soft iron as thick as your little finger and five or six feet long. It receives its impetus from an oak pole four or five feet long and as big round as a man's leg below the knee—a real man's leg—plus the whole power of a very strong man's arms, back, shoulders and loins, all working with the rhythm and swing of a professional golf player.

And that lilac-leaf point, with its dazzling edges, having reached out the whale's great blood reservoirs—the coiled vessels a foot in diameter — where they lie five feet below skin and blubber, rips and slashes them until there is set up so copious and violent an escape of blood as would turn the machinery of a sawmill.

And so it was that harpooning this whale and sending him into his death flurry, instead of being separated by a space of hours, were almost simultaneous. Except for backing away now and then, so that leviathan might have a clear stage for his death scene-a furious, thunderous, devastating swimming in a circle, a great raining and spattering upon the sea of anguish-blown blood, and an awful lashing in the air and crashing upon the water of the prodigious flukes-there was nothing for the men to do but look on, and wonder and whisper to each other-somehow they always whisper when the whale is dying-that they had never seen such a thing before.

Once I threw a pebble against the side of a hill and the -pebbles, sand, whole side of the hill began to a

### By GOUVERNEUR MORRIS

The Boy Bowers Made Her Out to be the Missing Whale Boat

then great boulders, and at last a forest tree, its surfacefeeding roots appearing to clutch and grasp for support like the hands of a man who has slipped on a steep roof. And seeing the havoc that I had wrought with one small weakly thrown stone, I felt something of the awe that those men must have felt when five minutes after Crandle had first thrown the harpoon the whale lay dead, belly up upon the sea; two hundred thousand pounds of flesh and bone, of fat and oil and ivory-a black island with a rockbound coast, in the lea of which they might have ridden out a storm, and against whose weatherside the waves would have broken and been tossed heavenward in foam.

The men felt as David must have felt when, nerved to the combat and ready to give his life, but very nervous, doubtless, and full of fear, he saw the stunned Goliath drop in his tracks, and leaping forward backed off his head before the giant could come to life again.

There was a long silence. Suddenly, and as it were from the heavens, there dropped a snow-white sea bird, that perched cockily, like an English sparrow, upon the whale's belly and began to tear at it.

"Hey, you! Get out o' that!" shouted one of the men. For he had an interest in that whale and did not propose to be robbed without protest.

But Crandle had turned his head toward the Mary Blount, which was now bearing down upon them; and it seemed to him that he saw a little figure in dark blue that waved a handkerchief and said: "Oh, well done! Well

At this moment Mr. Tuttle's boat came up, and the discomfited Minch called to Crandle:

"Say, what happened to him? Did you spit on him?"
"Why," said Crandle, "we told him about you trying to stick an iron into him, and he laughed himself to death."

Minch opened his mouth savagely, and so remained some time, being unable to think of the words which the moment seemed to require. But finally he closed his mouth, shook his head a couple of times

and then began to smile.
"I guess," he said, "if there was any drinks in this here part of the world they'd

be on me.'

Crandle's eyes stole once more toward the Mary Blount. And he saw that she was nearer—nearer.

Toward the dead whale he felt a certain friendship, for in his hour of opportunity it had played into his hands. And he knew that little by little the fame of his exploit would spread all over the whalers' seas, and would be spoken of with awe and envy wherever boatsteerers gather and compare notes.

His mind began to be flooded with wild and selfish thoughts. He would rise higher and higher in the world. He would be master of a ship. Captain Haithway-oh, something would happen to him; something always did happen if you wished and wanted hard enough. And to whom then, in her hour of need, would that blithe spirit in the great blue sea-cloak turn for comfort and support?

And he saw himself retired into a brick house, four square to the winds, having white columns in front. And at the back a summer house crowned with the figurehead of a ship, and having upon the roof a flat space with a hand-rail, to which he could ascend with his telescope and his children, to show them the ways of the stars in heaven and of ships going in and out of

And there drifted into his mind, beforging its clear workings, thoughts of men washed overboard in times of storms, and no questions asked; of razor blades smeared with verdigris, by which men shaving at sea have been their own executioners; and ways and means of death, violent and subtle, moved through his mind like a Mardi-Gras procession through a village street, each memory or invention as it were a scene done to the life and exhibited upon a float.

But three days later, the whale having been stripped of his valuables and turned over to the sharks and sea birds, and the Mary Blount having been scraped and scoured till she was once more as clean as artists in cleanliness could make her, he

got some pieces of fancy woods out of his capacious sea chest and began to fashion a little shipshape stand in which to swing a baby's cradle. And with the tail of his eye he took up with the boy Bowers the study of navigation at the point where they had left off.

Captain Haithway?"
"Mr. Tuttle."

"I'll be obliged if you'll step into my stateroom a moment, sir."

As a matter of fact, the misnamed room in question already contained Mr. Tuttle, so that Captain Haithway could do no more than thrust his boy ish head in at the door. He found Mr. Tuttle examining his sore side with the aid of a seaman's mirror and such light as filtered through two

thick prisms of glass let into the deck above.
"Something badly out of kelter, captain," said Mr. Tuttle. "It is getting sore to the touch, sir. I have called you in to prescribe for me."

Captain Haithway shook his head ruefully

"Perhaps one of the men has had experience in a hurt of this kind."

"Something inside must be damaged," said Mr. Tuttis, and he dropped his arm so that it covered the spongeshaped pinkish stain over his ribs. "You feel much pain?"

"When I move suddenly after resting in one position of a long time. But there is constant discomfort."

"How would it be if you went to bed for a few days and tried a compress, something to draw out the inflammation "I think it would be a good idea, if I can be spared

"That will be all right, unless something turns up." "Thank you, sir."

"Turn right in now, and I'll get out my book and make a poultice according to prescription."

Mr. Tuttle reached for his nightgown and pulled it over his head.

"You're very kind indeed, sir."

"Not at all. The sooner you're well, the better for all hands."

"I want to speak of that too. I can't get rid of the beling, sir, that I am in a very bad way. If anything happened to me you would be left without any officer who understands navigation. Crandle, however, and Bowers are making good progress in Bowditch. I was going to suggest that you take them in hand, sir. Practice them with the instrument and let them work out your own problems as they arise. That Crandle is a very able man.

"I'll give them lessons," said Captain Haithway briefly; but it's because I like to help men who are ambitious, and not because I think you are seriously sick.'

He turned on his heel, and Mr. Tuttle, a ghost of a smile on his lips, finished undressing and slipped into his bunk. Here, after a gingerly twisting and turning, he found the position that was easiest for his hurt side and closed his

Thereafter, weather and duty permitting, Crandle and Bowers came to Captain Haithway every day at noon and received practical demonstration in the art of navigation. But on the third day Mr. Tuttle dressed and came on deck, not because the resting and poulticing had helped him, but because he was too sick of idleness and solitude to endure them any longer. He pretended that he was better.

Crandle had been impatiently waiting for a word with

"Mr. Tuttle," he said, "some of us as knows the ropes a little has made our calculations, and it's the unanimous opinion that if we was to quit this here standing off and on and head for Honolulu, we'd just about fetch there in time."

"But we are in the midst of very fine whale country, Crandle, and what do you mean by fetching Honolulu in

"I mean, sir, that when a woman's day of fear comes she sight to have women about her. You could put it to the master, sir. You could tell him that in a straight run from

here to the islands he'd be as likely to get his full of oil as by cruising in these here waters, which you'll admit haven't shown anything but blackfish since we struck into 'em.'

"Captain Haithway has to think first of all of his duty to the owners."

"If you was in his boots, Mr. Tuttle?"

"Good gracious!" exdained Mr. Tuttle, and he thished like an old maid.

"But if you was?" Frankly, Crandle, I hould—I mean I'm afraid I hould—head for the nearest jing-in hospital, and if there sere any blind men aboard d send them aloft to watch or whales."

"Every man in this old ottom has an interest in the atch, same as the owners. ad if we're willing to thumb w noses at a whale or two, here can't be much harm in aptain Haithway doin' the ime."

"It won't do any harm to and him," said Mr. Tuttle. And he did. But Captain laithway sighed and said: The best catch the Mary lount ever made was in these aters. My duty is as plain the nose on a man's face." "Whales change their pasre from year to year."

"Get behind me," said aptain Haithway, smiling. "The men will be disapanted, sir. Mrs. Haithway's sifare is in the heart of every an on this ship."

"God bless them all!" said e young man with feeling. But I must do my duty."

"We've seen nothing but ackfish -

And there interrupted him om the lookout a great joys cry: "Blows! Blows! 1, Blo-o-o-ws!"

"Where away?" cried the captain.

"Off the larboard bow, 'bout three miles, heading northerly.'

By this time Captain Haithway himself was running nimbly aloft.

"Sperm? Are they sperm?"

"Ay-ay, sir—a gam o' them."

Crandle turned to the boy Bowers, his Neptunesque face

lighted by a sudden smile.
"If we followed them whales for days and days and they held as they hold now, we'd come pretty close to fetching up in Honolulu."

Bowers consulted the chart, which lay open between them, held down by weights, and presently nodded. "That's right," he said. "Why?"

Crandle winked one eye very slowly.

"When the captain of a ship wants the ship to go one way and the men want it to go another, what do you call it?" 'I don't know."

"You call it a difference of opinion. But when the men make the ship go their way, you call it mutiny."

And he began to chuckle darkly.

Late that afternoon the great bodies of two bull whales lay alongside the Mary Blount, and the work of cutting-in was begun in the dusk and carried on by the light of the try-works and of flaring torches.

At daybreak there was a short pause for hot coffee. Captain Haithway remarked to Mr. Tuttle:

I have never seen men work with such spirit."

"Crandle's responsible."

At the same moment Crandle was pouring a cup of coffee into his capacious mouth. The liquid was so hot that it scalded him. He only laughed. And he wiped his mouth with the back of his hand, leaving a long, dark smear of oil and soot. And he reached for his cutting-in spade, remarking to Shattuck: "Damn these here delays!"

AGAIN the Mary Blount sighted whales in a northerly direction. This time, however, she did not come up with them; nor were they seen by any one but the men in the lookout, from one of whom, just as Captain Haithway

was going aloft, there came the cry, "There goes flukes!" which means that a whale, in leaving the light of day for the dark depths of the sea, has stood more or less upon his nose and waved his flukes in the air.

These whales then sounded and were not seen again till nearly dark. They were at that time still swimming in a northerly direction; but they were no sooner seen than they were lost sight of, owing to the sudden falling of the tropic night. But the Mary Blount held on after them, hoping to raise them again in the morning, which as pure luck would have it she actually did-or others just like them. For Captain Haithway himself saw this gam and directed its pursuit from aloft.

The whales were loafing along, and the Mary Blount, thanks to a steady breeze off the larboard quarter, actually gained upon them.

But the boats were no sooner lowered and skimming in chase, leaping over the little waves like so many happy flying fish, than something frightened the whales-gallied them, as the saying is—and they began to swim as if they really knew where they were going and were in a hurry to get there, so that in a few hours they had put the rim of the world between them and the eyes of men.

"We're drawing out of the good country, Mr. Tuttle," said Captain Haithway.

"A whale is a whale wherever you fasten to him." "Very true, Mr. Tuttle, so we will keep her as she is till morning. We picked those fellows up once; if we've any luck we'll pick 'em up again."

The next morning there were no whales in sight. Captain Haithway held on till about noon. Having then taken his reckoning, he found the Mary Blount far to the north of where he could not but feel that the best interests of her owners and his own conscience required her to be.

"We must back-track, I think, Mr. Tuttle."

"Very good, sir."

"Kindly give the necessary orders."

Crandle was in the lookout with the fourth mate. These, perceiving that the course of the Mary Blount was being radically altered, consulted together in whispers. Then Crandle, his face shining with a strange light, stood upon tiptoe, and shielding his eyes with his hand and gazing in the general direction of the Hawaiian Islands, bellowed

at the top of his stentorian

"Blo-o-ows! Blo-o-ows!" Then he spoke to the fourth

"Pinch me when it's time to see flukes."

A few moments later, as Captain Haithway began to come aloft, the fourth mate pinched the calf of Crandle's leg, and Crandle bellowed:

"Flukes! Flukes! There goes flukes!"

"What are they?" came from the captain.

"A lone bull, sir."

"How was he heading?"

"Northerly."

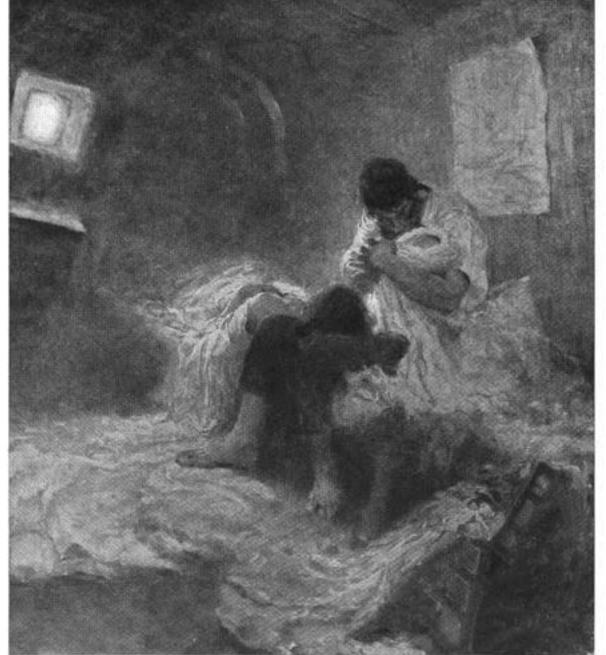

"Keep a sharp watch and let me know the moment he breeches."

"Ay-ay, sir!"

If those in the plot to carry Captain Haithway far from that path in which he felt the foot of duty belonged ever hesitated or were hurt by their consciences, a sight of Mrs. Haithway's face only served to strengthen them in what among themselves they called the mutiny of the Mary Blount.

Mutinies up and down the long courses of sea history have sprung up, with all degrees of violence from all kinds of reasons. Men have mutinied because there was too much beef; because there wasn't enough; because there were maggots in their biscuits; because there were wheels in their brains. They have mutinied for love of bad women and for hate of good men; and for the opposites of these they have mutinied. But never before, nor since, methinks, were the roots of a mutiny so deep set in chivalry.

She had a lovely face, and she believed that all men were good. And in her eyes at this

There They Found Him, the Baby Asteep in His Great Tender Arms

time, burning stronger each day, was that light which more than beauty or charm kindles manliness in a man's heart. And it must have gone a great way with the doubtful that, in spite of the heat which grew and grew, she still clung, whenever a cool shadow of excuse presented itself, to the great blue seacloak which they had made for her, and which she loved because they had made it.

For her each day had its surprises. Mysterious packages with her name upon them, scrawled, well written, staggeringly printed or just hoped at, appeared mysteriously upon the cabin table, until with tears in her grave eyes she told Mr. Tuttle to tell the men that she felt as if every to-day was her birthday and that every to-morrow was going to be Christmas.

Even her husband must not be present when she opened her packages. She could not bear that he should see her cry, even for pleasure and gratitude; and cry she would a great deal.

For between the little shirt for the baby that is to come and the little shirt for the baby that is gone there is an awful kinship. Little shirts they made, and in their blind ignorance of such matters they made little drawers besides. And little socks of many-colored wools and some of silk. And there were long swaddling clothes made of fine linen shirts that had been laid by against the coming of some roaring spree ashore. And there was a doll of sperm ivory, which is finer than elephant and not so prone to split. She had a face like the full moon, with eyes of black ebony and lips of red coral, and hyacinthine hair cunningly carved. And her arms could be bent at the elbows and shoulders; her legs at the hips and the knees. She was naked as the day she came from her maker's hands, and she lay in a bathtub carved from a length of she-walrus tusk.

From another hand came a rattle to match the doll; and there was a work-

ing model of the Mary Blount in a glass bottle-the blocks ivory, the planks beefbone and the rivets copper. There were scarves, cloaks, vests, caps, shoes, buttons, blocks, an oilskin coat, an infinitesimal sou'wester. And there were rings of amber and ivory to cut teeth upon. And one man had beaten a five-dollar gold piece into wire and made a pair of safety-pins, each set with an abalone pearl, which pearl, as all men know, makes up for being less valuable than the Oriental by being more beautiful. And there were many silver safety-pins, and other gew-gaws, beaten, whittled and filed from coin silver. There was a chain to go about the baby's neck, a bangle for its wrist, a ring for its finger.

And when she had found out from which of the men a certain present had come, she sent for that man, and held both his great rough hands in hers while she thanked him.

WITHOUT luck, the mutiny of the Mary Blount could never have been brought to a successful issue. Very far now from any grounds which would have been acceptable to her experienced and superstitious owners in a prospectus of a voyage, she fell in from time to time with real whales; enough, at least, to keep clear of suspicion those ghostly leviathans which the lookout men were always sighting from aloft-when most needed-and which were always unattainable, like will-o'-the-wisps, dancing

Why a Man in His Jenses Should Deliberately Place Himself in Jo Juicidal a Jituation Was

sities have been urging us. And eight hundred barrels of oil is really remarkably good at this early stage."

So good," said Mr. Tuttle, "that if I were in the lookout I should be inclined to keep my eyes shut. With this wind we should drop our hook in plenty of time. And though I am on what I feel to be a generous lay, I should deplore the delay of cutting-in so much as a porpoise."

No more whales were sighted, and the Mary Blount, crowded with sail night and day, made heroic progress for a whaleship. Optimism prevailed; even from Mr. Tuttle's drawn and suffering face that fated, driven look which it wore of late vanished for whole hours at a time.

Only Crandle, now a mainstay in the help of navigation, grumbled, and was ever turning his eye from the blunt and clumsy lines of the Mary Blount to the graceful, mist-drawing lines of her whale boats.

"This wind may hold," he would say. "And again it may not. And maybe the day of fear will come at the appointed time, and maybe it'll come sooner. If I was Captain Haithway I'd put her into one of the boats with plenty o' necessaries and make a runaway of it. Best come best, we'll be a week makin' port. But one of the boats would cut that time in two; and if I was the master, and the woman was mine, I'd make her cut it in three."

That very night the wind failed them, and in the dawn anxious eyes looked forth upon a flat and greasy calm that

ahead over the blue, and drawing the guileless Mary Blount nearer and nearer to the wise doctor and the efficient nurses of Honolulu.

At last a time came when even in Captain Haithway's mind there was no longer a question of turning back. And his wishes no longer colliding with his duty, he shaped the vessel's course direct for Honolulu, or rather he stood by with help and admiration while his pupils, Crandle and Bow-

ers, shaped it for him.
"At a pinch," said he
to Mr. Tuttle, "those two fellows could navigate the ship. Another week and I would guarantee it."

"I thank God for it," said Mr. Tuttle. "And I may tell you, sir, now that your decision is formed, that I have been in despair about myself. But the feeling that we shall be in port among doctors before very long gives me new hope and courage both for myself and for you."

"They will put you right in a jiffy," said Captain Haithway with all the optimism of youth. But Mr. Tuttle only smiled ruefully out of the corner of his mouth.

"The Mary Blount." continued the captain, "is keeping up her reputation for luck. Even the

whales are on our side. They seem to have led us where all our other neces-

smelt of fish. The sun rose, a vast copper disk without rays or the power to dazzle; but with it no wind rose, nor even the least breeze; only a blast of heat, without weight or power to propel, like that which streams from the open door of a furnace.

And now rose overpoweringly the smells of a whaleship, of oil and of bilgewater, and of hard-working men packet for many months into close quarters. And it seemed as if each hour saw a new myriad of cockroaches born into the world; so that the whole ship rustled with them, as a church rustles when the ladies come to service in their Sunday silks.

The sky was neither blue nor gray. It had a dark and indefinable color, an impenetrable quality. That amazing jewel, the sun, gave light and appalling heat, but was myless and unblazing like the moon, its vast outline dear and sharply demarked, as if a place had been cut out of the sky to receive it; it was more like a flat inlay than a saiing

Said Crandle to Mr. Tuttle, his face dark, prophetic and strangely moved as if with fear:

"It ain't any too early for hurricanes. Have you looked at the glass?'

Mr. Tuttle nodded.

"And what was it doing?"

"Falling, Crandle-falling very fast."

Crandle's eyes wandered to the whale boats.

"Too late!" he said.

EITHER there was no cloud in the sky, or the whole sky was a cloud, even in texture and thickness from horizon to horizon. At a few minutes before noon the sun, which had been growing less bright, as if the salt air were turnishing the copper, withdrew itself from men's sight. Toward one o'clock swift-moving ranges of water at long intervals began to roll in from the western horizon, now accented to the eyes by a straight line of inky black between the sky and the sea. The surface skin of the sea, smooth and silv. appeared to be stationary; only rising, as it were, and stretching like an elastic cloth to let the rollers pass under. and then contracting and dropping back into place. Sa. too, that staunch sea castle, the old Mary Blount, rose to let the rollers go under, and dropped when they had passed She suggested an awkward old woman learning to skip rope. But sometimes when she dropped heavily on her feet, at you may say, she smashed through the thick surface sin and squirted white water in all directions.

The black line along the western horizon thickened and climbed toward the zenith, and appeared to be neare throughout its whole length and height. A sea bird care out of the west, and went by at incredible speed in magnificent long curving swoops, to the right, to the left, like some pastmaster of skating doing the outer edge.

From the opposite direction came a school of porpoise, the schoolboys of the sea, putting forth all their mineulous powers of swimming and leaping, the sooner to men with the coming storm and play their wild sea game : the thickest of it.

Nobody knew just when the lassitude induced by the heat and the strong smells of the ship changed into a line of stern, electric excitement. It was about the time when Captain Haithway ordered his wife to go below. She had within the hour visited every part of the deck, and passed the time of day with each of the men in her pleasart. friendly manner. And she had clapped her hands often with pure joy at sight of the sea birds flying past. And she had laughed at the incontinent haste of the porposes w get into mischief.

She knew that there was going to be a blow. Well and good; it would be like those nasty times off the Horn. But one lived through them, and came on deck again and say the sun. Just before she went below she stood for a few minutes talking to her husband with great animatic. smiling up into his face; and he laughed down at her and gave her shoulder a playful shake, as one chum shows is

There Was Nothing for the Men to Do But Look On, and Wonder and Whisper to Each Other

### THE FAKERS By Samuel G. Blythe

OR the next year things went quietly for Hicks. He maneuvered with the Rollins-Barkiss case, using Gudger to help him postpone a court trial, wrote occasionally to Senator Paxton, and received much good advice from him and some congratulations as to his progress, which apparently satisfied the senator.

There was to be a special municipal election late in April to fill a vacancy or two on the board of aldermen and to elect a city recorder in the place of a Republican who had died.

"How long have you been here, Hicks?" Rollins asked him one day.

"A little over a year."

"Well, you've gained your residence then. Which one of these places do you want? You can run for alderman or for city recorder.'

Hicks hesitated.

"Go on," urged Rollins. "You haven't a chance to be elected, but you ought to do something for the party, something to show your loyalty."

"All right," assented Hicks, "I'll run for recorder." Rollins smiled. "Picked the biggest sounding one, didn't you?" he asked.

"Oh, my dear Mr. Rollins," protested Hicks, "you must not view it in that light. I merely said recorder because that seemed to be the most appropriate. An alderman, you know, is a sort of a personal representative of his constituents, and I have been here such a short time. Of course, though I feel I am fully capable of discharging the duties of member of the board of aldermen, it seemed to me ——"
"Forgive me, Hicks," said Rollins; "I was only joking.

Of course you can have the nomination for recorder. It's six of one and half a dozen of the other."

Hicks was disappointed that he was to be nominated by committee and not by convention, but he sent notices to the papers of the committee meeting and made a speech of acceptance that got him respectful notice in two papers and some goodnatured chaffing in two others. The contest was perfunctory. Nobody took interest in it. Hicks tried to vitalize it by active campaigning, but was not successful in stirring up much interest either for himself or for the issues involved. He had his name in the papers two or three times during the short campaign, and swore privately, but laughed pub-

icly, over a fling the editor of the Leader took at him as "our newly acquired Demosthenes whose vocabulary is as abundant as his hair and whose ideas are as scarce as his whiskers." At the election Hicks was snowed under.

"Just a necessary party sacrifice," oothed Rollins. "But you wait. We'll et them yet. The truth is mighty and nust prevail."

Then came the presidential campaign of 1900. Presdent McKinley was renominated at Philadelphia and Villiam Jennings Bryan named again at Kansas City. Rolins was a delegate to the Democratic convention, and eturned to Rextown fired with enthusiasm for the Peerless eader, as he invariably termed Mr. Bryan, and anxious o organize a fight in the district and get out every Demoratic vote. He had abandoned the free silver idea as an ssue, but not as a principle, and he was ardently an antinperialist and talked for hours to Hicks about the crime f the American occupation of the Philippines and all the ther phases of anti-imperialism.

He urged Hicks to prepare himself to go on the stump. licks was entirely willing, and mentioned his prospective ampaigning when he wrote to Senator Paxton.

Soon afterward he received this letter in reply:

Washington, D. C., August 1, 1900.

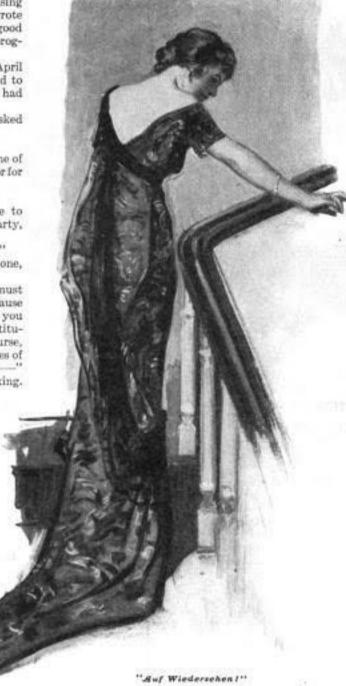

My dear Hicks: I am glad to learn of your progress, s indicated by your numerous letters, and I trust that you ill continue unfaltering in your championing of both the elfare of the people and the cause of the Democracy, in hich, as you must now think It seems to me eminently fitting that you should go on ie stump for the Democratic candidate, Mr. Bryan. hough it is my deep-rooted conviction that Mr. Bryan ill be no more successful this time than he was before, you

e a Democrat, and as such must be regular and enthusi-You have had some small experience in campaign eaking and are about to enter again on that phase of

Will you pardon me if I presume to set down a few

cioms that may be of value to you?

et me repeat to you that the great secret of successful olitical speaking is to tell the people what they already 10w. Never venture on any uncharted oratorical seas, ive them the old, familiar stuff, and they will approve and plaud; but if you try to tell them what they do not low they will view your efforts with cold suspicion.

Be conventional. Avoid new expressions. It is the acme of folly to refer to a working man otherwise than as a horny-handed son of toil. If you speak of the flag other-wise than as the star-spangled banner, you will be intro-ducing an innovation that will be unwelcome and probably will react against your party on election day.

It is imperative that you should never view except with alarm nor point except with pride. Furthermore, you must always assert without fear of successful contradiction, condemn in unmeasured terms, challenge the statement, shy your castor in the ring, issue a defi, lock horns with, stamp as unworthy, measure swords with, hew to the line, declare it is a deliberate and malicious falsehood, show neither fear nor favor, remark in passing, nail the lie, have your attention called, demand to see the books, turn on the light, insist the rascals shall be turned out, give an accounting of your stewardship, make clear the issues, express sublime faith in the wisdom, patriotism and justness of the people, and say this is the greatest Republic on which the sun ever shone.

As you are a Democrat you may go as far as you like with Thomas Jefferson. Also uphold the Constitution, lambaste the trust octopi for hours and hours and assault the money devil and Wall Street and Lombard Street. It is always safe to jump on the criminal rich and never neces-sary to name names. The broad, generic term "criminal rich" will answer, and you can get an hour out of that topic any time.

Soak all trusts. Again it is unnecessary to name names and you need not refer to the trusts that employ men in your district, and perchance may be contributing to your party funds. As you have factories in Rextown, you must be strong for union labor and the rights of workingmen. When you get out in the country never fail to call the farmers the hardy yeomanry who are the bulwark and safeguard of the nation.

Always refer to "the ladies, God bless 'em," and throw in a few flowery sentences about the children who are the future guardians of the safety of the Republic.

Choose your anecdotes carefully. Do not use any new ones. Tell the good, old, time-tried ones, and you will get

your laughs at the proper places. Do not be sarcastic, for the people will think you mean what you say, being of a literal turn of mind.

Again, the people, the dear common people, are the most fruitful topic in the world for political eloquence. They need constant attention and tribute. Any politician who neglects the people will be neglected by the people. They know how good they are—the people do—and desire to be told about it constantly.

Careful attention to these details, unceasing assaults on the citadels of privilege and plutocracy as maintained by the Republican party, and long interpretation of the Democratic platform, with some kind words about the Fathers and the dear old Constitution, will give you ample material. You won't make any votes, but you will get practice that may be useful.

Yours, for our altars and our fires,

WILLIAM H. PAXTON.

Rollins insisted on paying the expenses of Hicks, and Hicks spoke once or twice a week at the smaller meetings in various villages and hamlets in Corliss County. He was put on at several meetings in Rextown as a filler-in, and when Mr. Bryan came through in October met the candidate and was greatly taken with him as an earnest and sincere man, and accompanied him on his special car for a few miles after he left Rextown. Hicks secretly felt he should have been allowed to speak at the Bryan meeting, but Rollins told him he must creep before he could walk. Hicks sulked a little, but Rollinssmoothed him out, and Mr. Bryan helped by asking Hicks to introduce him at a five-minute stop he made at Grandsburg, fifteen miles from Rextown, where he was to address the crowd from the end of his car. Hicks thought out a fine speech.

He stepped proudly forward: "Fellow citizens of Grandsburg," he began. "In these days of Republican misrule, in the midst of this Republican debauch of corruption

Somebody pulled at his coat-tails.

"Introduce him," said a hoarse voice. "You ain't making this speech."

Hicks cleared his throat. "Fellow citizens," he began again. "In these days ——"

"Bryan! Bryan!" yelled the crowd. "Who in thunder are you? Bryan! Where's Bryan?"

Hicks raised his hand impressively. "Fellow citi-

"Bryan! Bryan! Bryan!" shouted the impatient

Mr. Bryan came forward. Hicks saw all would be lost unless he hurried. "Fellow citizens," he shouted, "I have the honor to present to you the Great Commoner, the Peerless Leader, William Jennings Bryan.'

Bryan's secretary shouldered Hicks aside and Bryan plunged into his speech. Hicks was much depressed. He had hoped to make a neat little talk of about a minute and a half. As he went into the car he saw Joe Felker, a Washington correspondent he knew, who was traveling with the party.

"Hello, Hicks!" saluted Felker. "What are you doing

"I am engaged in the practice of the law in Rextown," Hicks replied. Felker introduced him to the other correspondents and Hicks took Felker aside and said: "Say, Felker, do me a favor, will you?"

"Sure, if I can."

"Fix it with the other boys so my name will go in the

Felker laughed. "All right, old top," he said, and he was as good as his word. Even the press associations carried the important information that T. Marmaduke Hicks introduced Mr. Bryan at Grandsburg, and Hicks was highly elated, for he knew his name would be printed in most of the newspapers in the country that afternoon and the next morning.

Election came and Bryan's defeat. The Democrats in Rextown and Corliss County held their scattering own, but that was all. Rollins was much cast down. He had hypnotized himself into thinking the Democrats must win, but Hicks had been under no such delusion. He thought they had done very well in their district.

"Well," said Rollins dolefully, "we've got to take up the fight again. Right will triumph in the end, but I certainly did think we had them beaten. We had all the arguments

on our side."

"Yes," Hicks replied, "we seemed to have everything on our side but the votes. However, our time will come. I am sure of that. The people cannot remain forever blind to their own interests."

"I don't know," mourned Rollins; "I don't know. Seems to me as if the people of this country would rather see through a glass darkly than stand out in the sunlight.

I thought we had them beaten."
"Oh, well," consoled Hicks, "we'll get them yet. The people must and shall be aroused."

"I reckon so," said Rollins sadly, as he started away; "but we've got to get a bigger alarm clock than we've had yet.'

Business had been fairly good with Hicks and he had not been obliged to draw on Senator Paxton. He lived frugally and was careful of his money. He decided to run down to Washington for a couple of weeks, and wrote to Mrs. Lake to save a room for him. He arrived in the Capital late in November, planning to be there for a few days after Congress began its regular sessions in December. After he had been to the boarding house, where Mrs. Lake welcomed him effusively, he went

up to see the senator.
"Why, Hicks!"shouted Madden, as he entered the familiar offices. "Glad to see you! How are you?

How are you getting along?"
"Fine!" Hicks replied. "I'm the greatest little upholder of the undying, but somewhat unappreciated, principles of the Democratic party

you ever saw. Where's the chief?"
"Inside. I'll tell him you are here." Madden went in and came out almost immediately. "Go right in," he said. "He's anxious to have a talk with you."

"Hello, Tommie," said the senator. "How's the junior member of the firm of Paxton and Hicks, purveyors of the uplift to the toiling masses?"

"Couldn't be better, senator. You are looking well too."

"Yes, Hicks, I feel well, although the cares of the body politic and the woes of the people oppress me fearfully at times. However, I am cheered up by an occasional opportunity to put over something on them. Rather walloped you this time, didn't we?"

"We lost," said Hicks, "if that is what you mean; but

we are right, and right will prevail."
"Correct," exclaimed the senator. "Right will prevail in the end, but not, I hope, until we have secured all we need. Still, it isn't necessary for you to maintain the pose in here, you know. As you might say, I am on to your curves.

"In that case," Hicks replied, taking a chair, "I am pleased to inform you that, so far as I can see, I am doing well out in Rextown. I have become a leading young Democrat. I am getting some law business. I am establishing myself in politics, and I am never faltering for an instant in my devotion to the people."

"That's right, Hicks; that's right. The people can use a heap of devotion; and, conversely, you can use the peo-ple. Tell me about yourself."

Hicks sat for an hour and detailed his experiences. Paxton listened intently, interrupting now and then with a wise comment or to make some instructive observation. As Hicks finished and rose to go, Paxton said:

"That seems like a pretty good start to me. You have identified yourself with the Democracy in good shape. You have acquired a standing. All you've got to do is to hang on, to continue your present tactics, to remain steadfast to your numerously announced principles, and you'll land all right. But it will take time, my boy; it will take

"I know that," laughed Hicks. "These great reforms cannot be accomplished in a day. Besides, what's time to me when the stake is so big? I have all the time there is, you know."

"I guess you have, when it comes to that, and all the essential qualities for the part you are playing. By the way," he urged, "come up to dinner with me tonight and we'll have another talk."

Hicks raised a deprecatory hand. "Oh, my dear sena-tor," he protested, "I couldn't think of that. News of the fact that T. Marmaduke Hicks, the leading young Democrat of Rextown, dined with William H. Paxton, the unregenerate boss of the rapacious organization of the plutocratic United States Senate, might get back home. I am supposed to loathe you, you know, and all your fellows, with an exceeding great loathing, and it surely would contaminate me to be seen in your company. The people wouldn't understand it, and would say I have been captured by the forces of Mammon,"

Paxton looked at Hicks admiringly. "By George," he said, "you are even better than I thought. But come along. No one will be there but Mrs. Paxton, and she never tells anything. If she should tell all she knows about me I'm afraid there would be a forced vacancy in the Senate at my particular desk. Come on. You'll be per-

"What Did You Jay Your Name Is? Ah, Yes, and Where Do You Live?"

"In that case," Hicks replied, shaking hands with the senator, "I'll be there at seven o'clock."

HICKS made a few visits the next morning and decided to take his luncheon with Mrs. Lake. As he neared the house he stopped suddenly and stared at a woman who was coming down the walk toward him. She was a tall, slender woman who walked with exceeding grace. Her face was white, markedly so, but her lips were even more markedly red. Hicks, knowing little of women's attire, still knew enough to realize that she was exquisitely gowned. Her dress was of a silky black material and clung to her figure in soft and shimmering folds. Her hat fitted perfectly into her charming costume. It was black, too, but there was a quilling of white about it that added to its chicness. A filmy veil, long and black, flared behind her as she walked, and Hicks caught a glimpse of her throat, where her blouse was cut away, and of a jet necklace and long jet earrings. She approached Hicks with a slightly swaying motion that fascinated him.

He stood stock-still, staring at her. She came up to him, and still he stared. She passed him, apparently without knowledge of his existence, and he turned and followed her with his eyes until she went round a corner. Then, as if he were coming out of a trance, he said: "Jiminy, what a

He walked slowly toward the house. There was something familiar about the woman, something that reminded him of a woman he had seen before. He had not been able to get more than a glimpse of her face, but her figure, her carriage, her general air of distinction and modishness stirred memories in him.

He stopped at the steps, and searched his mind. "By George!" he shouted. "It's Mrs. Lester!"

Hicks ran up the steps and burst into the house. He sought the landlady. "Mrs. Lake," he asked excitedly, "is there a Mrs. Lester stopping here?"

"Why, yes," Mrs. Lake replied, amused at Hicks' eagerness; "Mrs. Lester has been here for more than a year. Do you know her?"

"No," Hicks replied; "but I remember when she was here before I went to Rextown, and I'd like mighty well to know her.

"I shall be glad to present you. She is a charming woman, so cultivated. Poor girl," she continued sympathetically, "she has been bereaved since you saw her." "Somebody die?" asked Hicks.

"Her husband. She is a widow."

"A widow!" exclaimed Hicks excitedly. Then in a

more solemn tone: "I am sorry to hear it."

"He died suddenly, soon after they were first here. It was a terrible shock to her and she hasn't recovered yet. They were very devoted. She returned to Washington, where she has some friends, and she has been with us ever since. Of course as she is in mourning she is quite secluded, but we enjoy her charming conversation and her recitals of her experiences abroad. Why, Mr. Hicks, she positively

knows everybody worth knowing. and as for travel-well, she has been just everywhere and she speaks we. eral languages. Really, you would take her for a Frenchwoman."

"I noticed she wore black," said Hicks, as if that were an achievement

on his part.

"Yes," continued Mrs. Lake "and I must say she is the most handsomely gowned widow I ever saw. She looks charming in her weeds."

It was Friday, and that night, as was the custom, everybody dressed for dinner. Hicks had his evening clothes with him, which he had not used much in Rextown. He shaved with great care, brushed his hair until it shone and spent half an hour polishing his nails and punicing his hands. At half after six he gave his hair a few more pats, sprinkled a little perfume on hinself, put some on the palms of his hands, gave a final admiring glans at himself in his mirror and west downstairs.

Most of the boarders were there, but not Mrs. Lester. Disappointed, Hicks wandered uneasily about examining the pictures he had seen a hundred times before, trying to be affable with those who remenbered him and looking constantly and eagerly toward the stairway. Just before the gong sounded she appeared.

Mrs. Lester stood for a moment posed on the bottom step. Shewere

a black satin gown that was exquisitely draped about her slim figure. Her corsage was cut low and her sleeves were short, displaying a milky throat and white, shapely arms. Her fingers glittered with rings, and long, oddly shaped ornaments of seed pearls depended from her ears. Her face had a fashionable pallor, but her lips were red and there was just the suspicion of a shadow under her eyes. Her intensely black hair was drawn flatly and tightly down across her ears, but had an undulated appearance for all that and extended out on her pale cheeks, where its black gave vivid contrast to their pallor. It was wound into an elaborate knot low on her neck. Her little feet were shod in black satin pumps with jet buckles. Her expression was that of discreet melancholy, of decorous but extremely

Hicks was standing in the hall, his lips apart, his eyes wide with admiration, his hands opening and shutting nervously.

After a pause he started forward. "Mrs. Lester --he began.

She gave no sign of recognition.

"Pardon me," stammered Hicks; "but, you see, I feltsaw-I have known -At this moment Mrs. Lake arrived, and relieved the situs-

tion by presenting Hicks to Mrs. Lester. Mrs. Lester smiled a slow smile at Hicks and said in a

low, well-modulated voice: "I am charmed."
"Pleased to meet you," chattered Hicks, who had regained a measure of his self-possession. "I feel as though I know you, you know. I saw you once a long time ago and

I have always remembered you."
"Indeed," she replied. "I regret that I cannot remember having seen you."

"Oh, it was about two years ago. I didn't meet you were with your husband. I \_\_\_\_" You were with your husband. I -

An expression of pain passed over her pallid face.
"Oh, I beg your pardon," Hicks said hastily. "I forgot.

You're a widow now, aren't you?" She made no answer, but sank gracefully into a chair. "Pleased to see you again," hurried Hicks. "I felt sure

we must meet again some day."
"Did you?" she asked. "How romantic!"

"Oh," Hicks protested, shifting from one foot to the other in his excitement, "not romantic, you know. Notice like that, of course. But I was so much attracted by you beauty and grace and all that, that I just couldn't be; being-being

She smiled up at him. "Being gallant," she said. Hicks grew four inches in his own estimation, which mac-

him a very tall man indeed. The gong sounded. Hicks feverishly sought Mrs. Lab.
"Please, Mrs. Lake," he pleaded, "put me at her take won't you?"

"Why, yes," said that agreeable lady, "I'll have another chair placed there."

Hicks rushed back to Mrs. Lester. "May I have " honor of escorting you in to dinner," he asked. "By greet good fortune I find I am to be at your table."

She bowed and said softly: "Arec plaisir, monsieur." Hicks didn't know what she meant, but as she rose he concluded she was willing and strode proudly by her side to the table, and as well as he could remember the polite details handled her chair and her draperies as he had seen her husband perform those offices long ago.

Hicks broke immediately into a panegyric of himself, telling of his lucrative law practice in Rextown, his political activities, his fame as an orator. He dilated glowingly on his prospects, and wondered whether Mrs. Lester was joking him or complimenting him when she said little things in French from time to time. However, he decided she was complimenting him, as she seemed serious in her

"And where is Rextown?" she asked him.

"Rextown," declaimed Hicks, "is one of the most beautiful and most prosperous cities in the Middle West." Once well launched, he made a long speech about the maniest beauties and the more manifest destiny of his place of

"And you are in politics there?" she said admiringly. "I should say I am. I am very active in the Democratic arty, and one of these days I hope to be elected to office." "Ma foi!" she said, "And you so young!"
"That's just it," urged Hicks eagerly; "I shall still be

here when the shift comes."

"What shift?" she asked. "The Republicans have verything in the country, haven't they?

"So they have, but my time will come. The people vill not bear this burden of oppression forever. They vill arise one of these days and sweep this corrupt gang of servitors of the special interests out of power."
"Then, I suppose," she said, "your

arty will come in and do the same hing over again. Il y a encore de quei daner.'

"Oh, no," protested Hicks, wonderng what the French meant, "not at ll, I assure you; not at all. We are he friends of the people"; and so it ent through the dinner.

Hicks had an engagement to meet Andden that night, but he broke it ithout compunction. Instead of seeig Madden he followed Mrs. Lester to the parlor after dinner and tried o monopolize her but did not succeed. or some of the others in the boarding ouse gathered round while Hicks ged inwardly at their presumption. he talked with vivacity and animaon, shrugged her shoulders in a most iscinating manner, made pretty little ioues, and told of her travels in arope, of the personages she had et, of her familiarity with the noility, of her knowledge and intimacy ith the great families of America. he discussed art with a knowledge at seemed to Hicks to be complete, ad a comprehensive understanding music, knew about books and pecially the authors of the day, ad most of the time was so far above ie head of Hicks as to force him to t in silent wonder at her vast range information.

She gave the impression that she id spent much of her life in travel, id her familiarity with the great suses of England, France, Germany id Russia was astonishing. She lked knowingly and shrewdly of inds and stocks and "the market," d this portion of her conversation ade Hicks even more interested an he was before. She rippled along om one topic to another, interlardg her sentences with foreign expresons and exclamations, and she had effective way of stopping, after e had used one of those expressions, d translating it, with a little grimace impatience with herself for using it. "Really," she said, "I have passed much of my life abroad it is second ture to me to lapse into French or issian or German. Those languages, pecially the French, are so much ore expressive than ours, don't you ink?"

She turned her eyes on Hicks as she ked this, and Hicks assented readily d said he had often been discoured at the poverty of English. He retted he had no French or German Italian, and resolved to buy a rase book and become a linguist.

There was not an international marriage for fifteen years with which she was unfamiliar. She talked of Fifth Avenue and Newport as if she had been reared in the one and lived every summer in the other.

When I was visiting in Newport," she would say, and then give a lively account of some great function she had attended. She was perfectly familiar with the English nobility, and it seemed from her talk that she had been an honored guest in every castle in that island.

At ten o'clock she rose to go, with many apologies for having run on so. "I hope," she added, smiling radiantly at Hicks, "I have not bored you."

"On the contrary, Mrs. Lester," asserted the gallant Hicks, who had not taken his eyes from her pale but animated face once during the evening. "On the contrary I have been charmed, more than charmed. It is a great honor and pleasure to have met you."

She bowed, and after a moment's pause, glided out of the room. She turned for an instant at the door, smiled brilliantly again, said "Bon soir," and was gone.

Hicks went up to his room in a whirl of delight. He felt sure he had made an impression on Mrs. Lester; recounted to himself every look she gave him, every smile; told over to himself her various perfections—the cataloguing took a long time-and went to sleep filled with the hope of a better acquaintance with this charming, cultured woman.

ALYS DE MOUNTFORT LESTER was born in a small A town in Pennsylvania. Her father was a doctor with a good practice and her name was Alice Jennings. Her mother was a refined, educated, quiet woman and the family one of the best in the village. Alice was sent to a fashionable school when she was seventeen, and ran away and was married to Hugo Lester before she had completed her second term. Lester was of English descent and his father had been rich, but at the time of Hugo's marriage was in financial straits. Hugo had been educated beyond his intellect. He was a gentleman of polished manners, and he had expected always to be rich and to live in luxury and at ease. He took his wife to his father's house and they lived there for a few years. Then the father died, leaving the son and his wife a big house and a correspondingly big mortgage, and nothing else.

Lester was forced to go to work, and he had no ability for work nor any adaptability. He attached himself to an old friend of his father's in a secretarial capacity, and after a year or so of this was appointed to a clerkship in the State Department at Washington. Through influential friends he was given a position in Paris, and he and his wife spent two years in France. While there he, being of good birth and aided by his wife, secured some commissions in Russia, Germany and Italy, and they traveled in each of these

Alice Jennings was a clever girl. From the time she began to evolve from the flapper state she held herself to be better than her associates in the home village and better than her family. She was an only daughter, spoiled by an indulgent father, and she had no difficulty in overriding her mother. She had a passion for clothes, which she indulged as well as she was able, and a talent for making her resources go further than any other girl in the village or at the school after she went away from home. She loathed the small town in which she lived, read the social news in

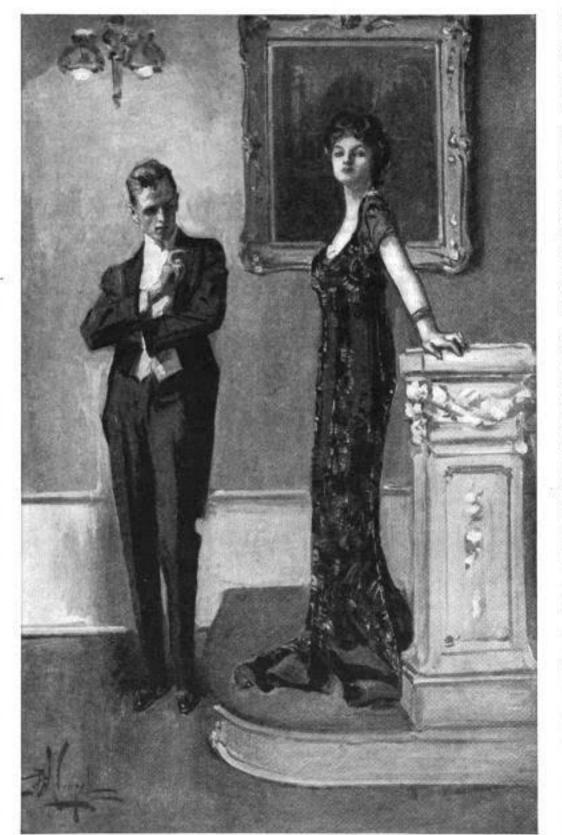

> the papers, even when she was just coming into her teens, and early displayed a fondness for exalting herself, by claiming acquaintance with those above her in social standing, that later became a positive genius for this sort of self-appreciation. She married Lester because she thought he was rich and had social position.

> She was smart at school and had a fondness for languages, but was entirely superficial in her studies. From her earliest childhood she was a chatterbox. She talked unceasingly, but brightly, and was clever enough to deal with subjects in her conversation concerning which she had a slight knowledge. She never, either as a child or as a woman, touched any but the high places in her talk. She was intensely egotistical and longed for admiration. She had a great skill in dress, and a full knowledge of her own good points and of how to accentuate them.

Her husband had little money, but she made the most of that. She had a genius for finding out desirable places to live that were within their means, and always insisted on rigid adherence to the conventionalities. She never failed to dress for dinner, nor would she allow her husband to appear after six o'clock in any but evening clothes. Their public attitude toward one another was one of exceeding and formal politeness, and she always strove to create the impression that they had much more money than they did have. In reality the Lesters got along well together, for Lester was a dull, listless, complaisant man, awed by the brilliancy of his wife and not daring to oppose her. His only talent was cleverness at cards. He was an expert bridge-whist player and his wife was almost his equal.

She could sing a little, play the piano acceptably, and she had a most agreeable talent for visiting. Indeed, she was a professional visitor and she was a useful guest. She and her husband were ever ready for bridge, and both could dance well. She was always faultlessly dressed in the latest mode, had an inexhaustible fund of small talk and was continuously in good spirits. The climbing hostesses who invited the Lesters to visit them, thinking the Lesters were of the set they aspired to enter, were always sure they would have one pair of guests who would carry themselves with the utmost rigidity of polite

(Continued on Page 36)

Her Expression Was That of Discreet Melancholy

## SIM'S SUDDEN SOTNESS

OWENA GOLLOP, first pulling her blue sunbonnet forward out of decent regard for an exceptional complexion, stepped from the moist, sloppy backporch into the glare of the sun. She carried a large basket of tightly wrung clothes, her strong, nicely rounded arms and sturdy young back making nothing of its weight. Stopping before the newly stretched line she began to work with a brisk energy quite out of keeping with the heat of the summer morning. In a very few minutes a lazily flapping and swaying screen of various form and color extended from post to post.

The trumpet vine that covered nearly one side of the old brick house was in flower, and among its gaudy blossoms a pair of humming birds poised and darted uncertainly. Rowena's eye caught the jewel gleam of their green and ruby plumage and she paused to watch them. Her expression was at once amused and exasperated.

"What's the matter with you-all?" she murmured, addressing the tiny creatures. "What for are you foolin' round, wastin' time that-a-way, pickin' an' choosin'? If you'd use your beaks more an' your wings less you'd be bigger birds."

One ruby-throat, after a prolonged hesitation, disappeared in the honeyed depths of a big red bloom. Rowena laughed as she turned away. "Made up your mind at last, did you?" she said.

A little cloud of dust arose above the sumac-crowned banks of the bending road, and soon a light wagon drawn by a team of small sleek mules came into view. From behind the porch trellis Rowena saw it approaching, and, straightening up from her washtub, wiped her hands upon her apron and reclaimed some strands of auburn hair that straggled from loosened pins over her flushed cheeks. At the same time she glanced at her reflection in the looking glass that hung over the wash bench for the convenience of the men folks.

Mrs. Gollop, a large, fair woman with a pronounced Roman nose, called from the kitchen at that moment.

"Hain't that Sim Hoisington a-comin' up the road, Rowena?"

"I reckon it is," Rowena returned.

"He a-comin' here?"
"I don't know." To herself in a lower tone Rowena added: "I reckon he don't either."

In fact, as she spoke the mules slowed from their sharp trot into a walk, were urged into a trot again, checked, and in front of the gate actually came to a standstill. The driver, after an undecided half motion toward descent, resumed his seat, leaned forward and flicked the off mule with his blacksnake. The team darted forward with a jerk and the whole equipage went rattling down the road at a pace that speedily-carried it round the next bend and out of sight.

"My land!" called Mrs. Gollop from the kitchen. "What's makin' you laugh that-a-way, gal?"

"Sim," answered Rowena chokingly. "He's gone on to town."

"Sim!" her mother repeated with withering scorn. "You might as well have said you wasn't laughin' at nothin'. You hurry and get that washin' out in time to help me with dinner. Berkley Pendleton aims to be here about noon."

"You'd better fix some kind o' spoon vittles then," said Rowena calmly. "His teeth ain't what they used to be."

She loosened her dress at the throat and peered through the lattice at the road, which was obscured for nearly half a mile past the bend by a windbreak of trees. Beyond the trees it made a gradual ascent, midway on which was situated a substantial looking farmhouse. After a little a good-sized dot, which was the light wagon and team, emerged from the treebelt and began to climb the hill. Rowena watched narrowly, her brows knit and her remarkably firm mouth set tightly. For a moment or two she breathed a little quicker; then her expression relaxed and she laughed.

"Well, he didn't stop to see Miss Lisbeth Minnick either," she said.

Once past the farmhouse on the hill, the light wagon went smartly along, and in half an hour it rolled into the town of Fairfax and stopped at Jim Allen's store. A tall, well-built, brown-haired young man of twenty-three or four got out, tied the mules to the long hitching rack and went into the store.

The storekeeper's eyes twinkled behind their spectacles and his humorous mouth twitched at one corner as he greeted his customer.

"Howdy, Sim."

"Howdy, Mr. Allen," returned the young man in an agreeably modulated drawl. At the same time a quick brilliant smile illumined his good-looking face. He felt in his pocket and produced a written list. "Here's some

### By Kennett Harris

"Well, Daggone It! What for Did She Ask Me to Stay if She Didn't West Me!"

tricks Aunt Hitty allows she wants," he said, giving the storekeeper the paper. "If you'll put 'em up right away I'll wait an' take 'em right along. I'm sort of rushed to get back to some fencin' Ab an' me has got to do."

The storekeeper smiled, focused his spectacles on the list and read it through. "Hum!" he remarked. reckon that's all clear enough and plain sailing."

"I reckon it is," said Sim in a relieved tone. "She knows what she wants, Aunt Hitty does." He spoke admiringly.

"I'll put 'em up right away, Sim," said the storekeeper. "Set down and smoke a good seegar-if you've got one

In the course of ten minutes he had the articles packed neatly in a cracker box. "Nothing else, Sim?" he asked. "Yes," answered Sim; "I want some nails. About thirty pound I reckon-tenpennies. That's all."

Allen turned to execute the order, but suddenly stopped, his eyes twinkling again. "What kineo' nails do you reckon

you need, Sim?" he asked.
"Tenpennies," Sim repeated.
"I know," said the storekeeper, "but as to the nails now—do you want common, ord'nary nails or do you want these yer wire nails? Some likes one kine and some likes the

A very curious change came over Sim's face, his smile faded, his jaw dropped slightly and his brown eyes stared blankly beyond his questioner. Presently he said with almost pathetic anxiety: "Which would you get, Mr.

A discussion as to the respective advantages of common and wire nails followed, during which Sim veered from one to the other as the storekeeper adroitly urged him. At last he gave it up.

"Dogged if I know," he said. "I reckon I'll have to study on it some. Mabbe after all a rail fence you what I'll do, Mr. Allen. I'll take this yer stuff of Aunt Hitty's now and I'll see what Ab thinks about the

He shouldered his box and went out hastily. The storekeeper chuckled and the laugh was echoed by two men who had entered the store a few minutes before—a lean, slabsided, ropy-necked individual of middle age, whose long, intensely black mustaches had a melancholy droop; and a stockily built young fellow with an aggressive air and a quick, challenging eye.

"Sim's havin' a right smart o' trouble about that fence of his'n," remarked the elder man. "He commenced for to start on it about a week ago, but he hair't got, as you might say, started yit."
"How's that, Berk?" inquired the storekeeper with

flattering interest.

The lean man cackled and hoisted himself stiffly to a seat on the counter. "First off, Sim figgered on building a rail fence," he explained. "Then Perry Spencer cone along and argued for a hawg-tight bo'd fence, and Sin allowed he had the right of it. At noon Ab, Sim's hired man, allowed that with eight-inch stuff ten dollars a thousand at the mill, and a bad road to haul over, bo'ds would be mighty extravagant, specially when the mile wouldn't cost nothin' but the work. Sim owned up it did look that-a-way, and him an' Ab was grindin' their axes when the schoolmaster come up an' showed him by figgers how shiftless an' wasteful a rail fence was, what with the lap at each end of the rail an' the jog that put a four-foot-wide strip of good co'n land out of business. Since then Sim's been hesitatin' atween a barb-wire an' a stone wall an' a osage hedge; but seems like he's went back to the bo'd idea.'

The lean man cackled again with great enjoyment and a touch of malice. "Sim got along tol'able well while his mammy was round to tell him what to do," he resumed; "but sence she died and his Aunt Hitty went to keep house for him, the farm's run down right smart. Mis' Hitty, she's a manager as far's the house goes, but she hain't got the knowledge of outside like old Mis' Hoisington had, an' Ab he ain't keerin,' how little gets done. He's willin' to wait till Sim makes up his mind.

"Well, they tell me Sim's right popular with the gis anyway," said the storekeeper. "You've hearn talk of that kind, Ben?"

Ben Foster, the stocky young man, frowned. "So's poodle dogs popular with the gals," he growled.

"Seems like they're all took with Sim," the storekeeper went on musingly. "Don't matter whether they're black-eyed an' sort o' languishin' or whether they're red-haided an' hustlin'. Namin' no names, I've noticed that myse'f."

Foster's eyes rolled savagely. "I wouldn't name as names if I was you, Jim Allen," he said menacingly; "not

less'n you want trouble."

"Me want trouble?" smiled the storekeeper innocently. "Shucks, Ben, that's the last thing I aim to have. I reclus you must be a-skeered I was goin' to say suthin about Lisbeth Minnick. Now there hain't no need o' that. You're too techy. Look at Berkley here. If I happen to pass a remark about -

Berkley Pendleton interposed. He was pulling his lost mustaches nervously and red showed on his cheekbons through his sallow skin. "Jim Allen," he remonstrates "there's sech a thing as too much coddin'. There's subjects that a man don't keer to be codded about. You're right smart of a codder, we all know that, but you hain't likely to he'p your business by cyarrin' it too far. I comin here to get your prices on a bill o' goods. I didn't came for to be codded."

"My land, Berk!" ejaculated Allen. "Ain't you a little mite previous. I leave it to Ben here if I so much # mentioned Rowens Gollop. Don't you holler before you'n hurt, Berk, nor you either, Ben. Lemme see that bill o' goods you was talkin' about."

By the time that Pendleton had come to an agreement with the storekeeper, Sim Hoisington was at the brows the hill overlooking the Minnick farm and already feeling uncomfortably conscious of the impending necessity # making a decision. He could see in the Minnick yard: woman's figure that he recognized—a slight, tall figure that moved with languid grace, unpinning clothes from 1 line. It was Lisbeth Minnick, a maiden on whom Simi thoughts had dwelt more or less for a year past. Sin's thoughts had vagabond tendencies, roving at the direction of his artistic eye wherever beauty bloomed along Limit Tarkio; nevertheless, Lisbeth had entertained the longer than any other young woman, excepting perhaps Rowena Gollop.

He checked his mules, reconsidered, and was chicken them on again when the girl called to him. The wars stopped and he waved his hand. "Howdy, Lisbeth. How

"Tol'able," returned Lisbeth. She walked to the less with an easy, deliberate movement and rested her arms = the capboard.

"Better come on in an' stay to dinner," she invited her dark eyes were more cordial than speech. "I'm in a kine of a rush right now." Sim obeca

"You're in a rush most of the time, seems like," pouted Lisbeth. "Well, why don't you come up Sunday afternoons once in a while?"

"I'd sooner come when you're a-feelin' lonesome," Sim declared boldly. "Sunday afternoons I take notice you've got your porch all cluttered up with Ben Fosters and things. I seen Ben in town a while ago."

"I seen him last night," said Lisbeth. "He ain't afraid I'll bite him, like some folks."

"I reckon he don't need to be," Sim bantered. "I'm sort o' skeered he'll bite me, though, the way he looks at me."

"He won't be here tonight," Lisbeth suggested.

"I s'pose you'll be feelin' mighty lonesome then?"

"N-huh!" She shook her head and smiled.

"Then there won't be no need of me comin'," "No special need of it, Mr. Smarty," she flashed. Don't come if you don't want to." She turned her back on him and walked to the house with unusual briskness, while Sim sat in his wagon looking after her, the blank tare in his eyes and his mouth half open. Presently he ighed and gathered up his reins.

"An' I'd jest about made up my mind to stay to dinner," muttered. "Jiminee, she's a spunky little piece!"

He had no strain put upon his powers of determination s he approached the Gollop place. He had hardly turned he bend when he descried Rowena walking to the front nte with the evident purpose of speaking to him. He vas particularly glad at the sight of her too. Somehow he vas always glad to see Rowena.

She was good to look at, for all the plainness of her busiess-like checked gingham apron and the ugliness of her unbonnet. The apron did not cover those well-rounded hite arms of hers, and, facing her, one could penetrate he depths of the bonnet with an admiring eye and disinguish the little moist curls of copper-colored hair that ly against her creamy, fine-textured skin.

She carried a package in her hand, "Give that to Mis' litty, Sim," she directed. "It's the quilt pieces I promised er." Then: "Why didn't you stop this morning as you

as passing?"

"Plagued if I know," Sim replied in some embarrassment. I did come mighty nigh it, but-I didn't see nothin' of ou round. I was disapp'inted too. I hain't seen you in coon's age, Rowena."

'You might have seen me at meetin' Sunday," she minded him. Sim's embarrassment deepened as he ammered something about a change.

"You a-goin' to jine them Meth'dis'?" she asked.

"I d'know about jinin' them," he faltered. "I was jest talkin' with Preacher Williams the other day and he st'nly put up a good argument for the Meth'dis' folks. allowed it wouldn't do no harm to 'tend their meetin'."

"Huh!" remarked Rowena. "I hearn that you aim to bte for Bud Watts for sheriff," she went on. "I hain't made no promise," said Sim. "Bud come to e the other day an' we talked politics some, an' it seems ce to me Bud's right well qualified an' -

"An' a black Republican," Rowena supplemented.

"Well, there hain't no use bein' hidebound, Rowena," pleaded Sim. "Co'se I've allus been a Democrat."

Rowena began to laugh, "Oh, Sim, Sim!" she cried; "ain't you right sure of any livin' thing?"

Sim took courage from her relenting. "I certainly am," he declared. "I'm right sure there hain't the beat of you in seven counties. I wisht you felt the same way about me that I do about you, Rowena."

"Well, you can just bet I don't," said Rowena positively, but still smiling. "Put your mules up an' come in to dinner, Sim. It's about ready."

Sim was about to comply when the sound of wheels made him turn his head. Another light wagon had driven up and stopped before the barnyard gate some yards away. Berkley Pendleton got out, swept off his broad-brimmed black wool hat in elaborate salutation of Rowens, and then opened the gate and drove in.

"I reckon I won't stop today," said Sim stiffly. "Aunt Hitty's lookin' for me. You've got company anyway."

He added the last remark uncertainly, and looked at

Rowena as if he expected protest.

"Jest as you say, Sim," the young woman answered composedly. "Some other time then mabbe."

She nodded in a friendly manner and left him.

"Well, daggone it!" exclaimed Sim. "What for did she ask me to stay if she didn't want me!" He picked up his whip and cut quite viciously at the shirking off mule. "Daggone it!" he repeated with emphasis.

He turned the package over to Miss Hitty, and when she had checked the groceries with her list he asked a question that had been vexing him:

"You aim to take in the dance at Prothero's tomorrow night, Aunt Hitty?"

Miss Hitty looked at him with surprise. She was a stout, almost massive, woman well into her forties, with a double chin and a chronic shortness of breath; but her heart was young.

"Well, I reckon I do," she replied with some asperity. "I allowed it was all settled you was to take me. You haven't been askin' no gal to go, have you?"

"No," Sim replied with a sigh. "I didn't know but-Shucks! There hain't no gal I'd want to take."

"Did Rowena say anythin' to you about goin'?" asked Miss Hitty.

"Not a word," her nephew answered. "I reckon Old Man Pendleton will beau her though. He's there to dinner now. Seems like he'd be thinkin' of somethin' else than shinin' up to young gals."

He spoke with some bitterness.

'If you're a-talkin' about Berkley Pendleton, he's a long ways from bein' an old man yit," said Miss Hitty indignantly. "Old Man Pendleton! He ain't no green, saphaided boy, but Rowena Gollop might do a heap worse than Berkley an' I reckon she knows it. All that s'prises me is he don't look round a little more afore he takes up with

Sim turned on his heel and strode from the room. "These yer women!" he muttered. "There's Lisbeth miffed about nothin', and Rowena --- I wonder if that

"Lemme Fix it for You. It's a Turr'ble Pretty Tie"

old skeezicks ---- " He whistled a moment or two thoughtfully. "I reckon I'll go see Lisbeth to-night. I d'know though. These yer women! A fellow cain't never tell where to find them."

Meanwhile Berkley Pendleton was entertaining the Gollop family with an account of Sim's fence and the nail incident at the store. Mrs. Gollop laughed very heartily. Rowena laughed not at all.

"It's a mighty small thing to pick on," observed the young woman with a contemptuous look at the smirking widower.

"You hesh!" commanded Mrs. Gollop. "It's a mighty ser'ous thing when a young man hain't got no more backbone than an angleworm. I don't hold with shillyshallying, an' I never thought you did neither, Rowena. "I can most generally take a stand and stay sot,"

Pendleton boasted.

"So can a mule," said Rowena. "But I reckon by the time Sim's as old as you are he'll have a heap more sense," she concluded ambiguously.

Prothero's was en fête. The east wing of the big house was ablaze with light, a beacon to Little Tarkio up and down the valley. Buggies, spring wagons and farm wagons formed a long line against the fence outside, and within a

large representation of the beauty and chivalry of Atchison County mingled in the mazes of the dance, tripping, floating, jigging heel-and-toe, gliding, thumping, stamping and whirling in saltatory ecstasies. Three sets at one time-and they might have made it four at a pinch. Brownnecked lads in the bravery of Sunday diagonals and stiff linen, their hair slicked to a marvel; elderly bucks shaven to the quick and redolent of the silvered cachous that they carried in their vest pockets; lasses, plump and rosy, in glorified gowns of virgin white and many ribbons; matrons, normally staid, gamboling with kittenish abandon; little pig-tailed girls even, shrill and active débutantes of eleven and upward; and dancing, every one of the twenty-four!

They danced to real tunes in Little Tarkio-Turkey-in-the-Straw, Whistling Rufus, Georgia Camp Meeting, and the like. Mat Bingham played them. Seated on a chair that had been placed atop of a stout kitchen table, the gangling, raw-boned Orpheus of the Bottoms sawed them out indefatigably, the broad sole of his cowhide boot slapping time on Mrs. Prothero's well-scoured deal. Standing near him, Prothero, the red-bearded, burly host, called, roaring the changes in a voice that made the windows rattle, patting juba with his big hands, and now and then singing in a sort of mellow bellow: "Gents, honor your partners! Swing your partners! Right hand to partner and grand right and left!"

Sim bent to Lisbeth, not ungracefully, and scraped his right foot behind him in the approved fashion; then, advancing, he clasped her slender waist and at the exact note of the music swung her clear off her feet with astonishing ease.

"I cert'nly hate to let loose of you, Lisbeth," he murmured ardently as he set her down.

"I Hate to Let Loose of You"

#### A Distinguished Invalid

WE FEEL safe in assuming, at this writing, that you have not heard anything of the United States Senate during the last few weeks. We ourselves had so completely lost track of it that its existence had passed from memory until an inquiry from a valued correspondent brought it to mind. Hasty search through the newspaper files of the last fortnight yielded no clew to its whereabouts or condition; but a wire to Washington brought trustworthy information that we gladly pass on to the public.

The Senate, it appears, has been suffering a prolonged fit of hysterics. The patient, it may be recalled, has been in nearly continuous session for several years. Cut off for that long period from all healthy contact with the normal interests and activities of American life, shut within itself and stewing in its own juice, it got into a very unhealthy state—probably somewhat comparable to that of the Indian mystic, who rivets his attention exclusively on his own great toe until he loses all sense of reality and lives wholly in hallucinations.

Some time last winter—nobody seems to remember exactly when—President Wilson demanded the repeal of the provision granting free passage through the Panama Canal to American coastwise vessels. The result of this fresh demand on a nervous system already reduced to an extremely weak, disordered state was to throw the patient into hysterics.

We are happy to hear that the case is far from hopeless. For a complete recovery, all the patient needs is to go home, mingle with people who are normally conditioned and productively engaged, look over the busy, fruitful country, and so recover a sense of proportion. Five months of this treatment will make it quite fit again.

#### Foreign Trade

THE convention at Washington to promote foreign commerce of the United States coincided with a Treasury statement that showed a balance of trade against us for the first time in some years. In April our foreign purchases of merchandise exceeded our sales by ten million dollars, and for three months before that our favorable balance had been steadily declining. We owe Europe somewhere round fifty million dollars a month in interest, insurance, ocean freights, tourists' expenses, and so on.

To trim the ship we must sell at least that much more goods than we buy. When the monthly trade balance falls below thirty millions we are certainly going into debt, Probably it takes fifty millions a month to keep us even. The latest Treasury figures are a hint to push foreign trade.

#### Amenities With a Club

WE DO not believe there is any good reason why the administration of our tariff laws—this Underwood Law quite as much as any of its high-protection predecessors—should provoke so much irritation and resentment. Time out of mind this Government has regarded the foreign manufacturer who ships goods to the United States as

a presumptive rascal. That attitude may be warranted by sound business principles, but the frankness with which we avow it is poor policy.

We want foreign trade and we cannot have it on one side of the ledger only. Irritation and resentment on the part of European sellers must be an obstacle to our dealings with European buyers. We have claimed the right to send our Treasury agents into the shops of foreign manufacturers to examine the books, not only with regard to factory prices of articles shipped into the United States but with regard to any other matters the agents might be curious about. We have asked foreign governments to confer on our Treasury agents a power to inspect books and cross-examine manufacturers which those governments do not claim for their own agents.

There is no question that our Treasury agents abroad have in certain instances behaved in a truculent, overbearing manner. Foreign manufacturers have been exasperated to the point of asking their governments not to take part in our Panama Exposition.

And all the while we are exerting ourselves to establish friendly relations with these same people on the selling side. In the administration of our turiff laws there is a touch of uncouthness that intelligent merchants would not tolerate in their business relationships. A little more urbanity, please! It pays.

#### Free Exchange

A PRINTED notice that a small sum is due in the city of New York contains the following injunction: "If payment is made with an out-of-town check ten cents must be added to cover cost of exchange." This reminds us that in no other country, the commerce of which is comparable with that of the United States, is a man penalized for paying his debts.

Free or virtually free exchange is a cardinal feature of every sound banking system. The idea is to make getting the money to the place where it is due as cheap and easy as possible. There may be some excuse for charging exchange on a country check; but, at least, a check on a bank in a clearing-house city ought to go at par in any other clearinghouse city, for virtually no expense attaches to collecting it.

There is a good deal of speculation as to just how far the new banking system will make collections free. It should make them absolutely free among cities.

#### Crocodile Tears

PROFITS of the St. Louis and San Francisco syndicate, it appears, did not amount to thirty million dollars, but to a considerably smaller sum; yet the road is now bankrupt. The Rock Island has defaulted on bond interest. The New Haven is making little above operating expenses and fixed charges. The injury the gross mishandling of these three great properties has brought on the American railroad situation in its broadest aspects is hardly calculable.

Is anybody really responsible? Can the managements say to the collective security holders and to the public, which is vitally interested in sound railroading, "Awfully sorry we landed you in this mess, old top; we'll try not to do it again!"—and let that end it?

#### Trackless Traffic

WE EXPECT to see a time when the amount of freight moved by mechanical power on highways will exceed that moved on tracks. There is no question that the freight movement on highways already exceeds that on tracks.

The first item in railroad traffic, as reported by the Interstate Commerce Commission, is agricultural and animal products, amounting to two hundred million tons. Nearly all of it was hauled in wagons to the railroad station and distributed to consumers in wagons. A large part of nearly three hundred million tons of manufactures was hauled in wagons. So, throughout the list, the railroad haul generally implies a wagon haul at one end or both ends. And there is a large freight movement by wagon that does not get to the railroads at all.

Everybody knows that wagon haulage, on a broad view, is vastly more expensive than rail haulage. Investigation has disclosed numberless cases in which the cost of hauling a given article two or three miles by wagon exceeded the cost of hauling it many times that distance by rail. Formerly trackless haulage meant animal power; but the development of gasoline and electric motors within a few years has provided a means of haulage without tracks which, under favorable conditions, is much swifter and cheaper than animal power.

The first condition is, of course, a good roadway—hard, smooth and well maintained. In cities where pavement provides a good roadway mechanical power is steadily supplanting horses for trackless haulage. With good roads in the country, there is no reason why a great part of the trackless haulage should not be performed by mechanical power, with a large total saving of time and money.

The rural freight route might well move a great part of the farm's products to market and fetch back most of the farm's supplies; in fact, an expert on the subject by predicted that within a few years a considerable part of what we now regard as main-line railroad freight traffe of move over highways by mechanical power, even for its distances.

For the achievement of that condition the first requisis is a complete network of good highways.

#### Great-Grandfather's Politics

THE legislative union between Great Britain and Inland—which was repealed the other day by the third passage of the Home Rule Bill through the House of Commons—was established in the first year of the nineteenth century.

As to the means by which it was forced through the Irish Parliament: Twenty-eight Irish peerages were created, six Irish peers obtained English peerages, and twenty others were moved up a rank in the peerage—most of these honors being bestowed by the government as bribes and rewards for services in passing the bill for the union. The English Government bought outright eighty Irish heroughs, returning one hundred sixty members to Parliment, and paid a million two hundred thousand pounds it cash for them—which sum, with rare humor, it added to the national debt of Ireland; so that Irishmen have been paying interest on it ever since.

Members of Parliament who would not vote for union were bribed by offices and honors to resign in order that their places might be filled by those favorable to union. Twenty-three practicing barristers voted for union. Three years later six of them were on the bench and eight other had received high honors under the crown. Thirty-tax barristers voted for union in the bar debate of 1799. Three years later only five of them were unrewarded.

Just before leaving Ireland, Cornwallis sent over to England a list of fifty promises of places, pensions, legappointments, and like rewards, which he had made it consideration of support of the union, but which, up to that time, had not been fulfilled by the English Government.

Lecky, from whose history the above is compiled, addi"It is scarcely an exaggeration to say that everything
within the gift of the crown, in the church, the army the
law, the revenue, was uniformly devoted to the great object
of carrying the union. From the great noblemen, was
bargained for their marquisates and ribands, from the
Archbishop of Cashel, who agreed to support the union on
being promised reversion of the See of Dublin, the virus of
corruption extended and descended through every filed
of the political system, including crowds of obscure met
who had it in their power to assist or obstruct addresse
on the question."

#### The Wage Puzzle

THE Bureau of Labor Statistics reports that wages by the hour in the cotton industry of the United States advanced fifty-one per cent from 1900 to 1912. This is almost exactly equal to the increase in price of food in the same period—that is, the food consumed in an average workingman's family as reported by the same bureau; at that table produces a pleasing sense of proportion and balance. But we turn over to the woolen industry and find that wages have advanced only thirty-four per centwhich seriously disturbs the balance. Then we proceed to the silk industry and discover that wages have advanced just nineteen per cent, which upsets the balance altogether.

We seek an explanation in the tariff, and learn that woolen manufactures have been enjoying a protection equato about ninety per cent, and cotton and silk only fifty in fifty-five per cent. Yet wool wages have gone up only about two-thirds as much as cotton wages, and the latter have gone up nearly three times as much as silk wages.

These figures deal, of course, with the increase in warm during the last twelve years, not with the actual rate of wages; and we might explain the discrepancy on a supposition that silk labor was well paid a dozen years are but we remember the silk strike of this year, in which the hands bitterly contended that they are not well paid even now. Probably it is a question of organization.

#### Here Comes the Bride

SHE comes breathless, perspiring and more or less distrieled, pursued and surrounded by some well-dressed male and female rowdies who throw rice and confeth a her, while their clamor announces to the passengers loans ing in the station or looking from the car windows that are has just been a party to a ceremony which some all fashioned folks regard as having a rather sacred character or at least as being of a peculiarly tender and intimate nature.

It is well known that in several more primitive contactives marriage is attended by demonstrations of a frank arrude sort, which, however, have a certain robust validable well-conditioned and presumably at least half-educated Americans should be made an occasion for public horses.

## Who's who-and why

#### Serious and Frivolous Facts About the Great and the Near Great

#### The Speech That Stuck

CUPPRESSED speech is one of the most distressing things that can happen to a person of oratorical tendencies. Though not ordinarily fatal, it never fails to produce so dour a view of life on the part of the speaker who contains but cannot contribute the sundry gems of oratory which clog him that he becomes a hopeless pessimist and bewails the loss of the faculty of proper public address-but not the lack of public address, which would stamp him as singularly nonobserving of the proceedings of the day-or sets him on a chase for an opportunity for verbigeration and makes him a village pest.

You can see how it is yourself. A man is an oratormost men are, or think they are-most political men, that is-and he has thought up a fine peroration, or a few choice paragraphs, or an entire speech. His system is encumbered with these words. He must needs unhamper himself of them in order that he may be happy, and in order that he may bestow happiness and learning and reason, or flubdub, on others. Though he may have abundant opportunity to discourse in other language, of which he ordinarily has a full supply, there comes no fortunate moment to him where this particularly impending speech fits in; and he makes his weary and, no doubt, rhetorical way up and down the world, vainly hoping for an opportunity that will fit the eloquence congested within him.

It is a sad fate-a sad fate and a piteous! If the apropos hour does not arrive he goes to his grave a broken ballyhooer, conscious until the last that, had the hap been provided, he would have been hep, and mourning for the loss the world has sustained because these words were left to burn within him instead of being thrown, blazing, into some great forensic crisis.

Hence, to escape this lamentable end, the man who suffers from suppressed speech uses the most extraordinary efforts to attain a position or a place where he may rid himself of what stews and stagnates within him, and at least add to the gayety if not to the store of knowledge of the universe. He works and struggles and wanders and toils, seeking for the moment and the amelioration, pausing at nothing; rising after each defeat to press on to the goal where fate shall be so kind as to allow him to get it off his chest.

Take the case of Henry Vollmer-typical, if ever a case was typical—the case of Henry Vollmer, which so aptly and illuminatingly illustrates my point. For thirty years, up to about three of the clock on the afternoon of the nineteenth of March, 1914, Henry Vollmer had spread himself over Iowa and the neighboring territory, a gaunt and gasping victim of suppressed speech. He had one in him he could not get out. He suffered tortures-tortures! And he rushed from Allamakee to Pottawattamie, from Winnebago to Appanoose, up and down, crisscross and catercornered in Iowa, to find the perfect conjunction of the time, the place and that concealed and eloquent communication. Without result, ladies and gentlemen.

#### Surcease From Suffering at Last

DO NOT, I pray you, think I convey here the meaning or the intimation that Henry Vollmer, in his progress throughout Iowa, did not find ample opportunity for speech. He did. He spoke whenever he was asked, and oftentimes when he was not asked. So far as making speeches is concerned, there never yet arose an occasion-personal, political, economical, or having to do with any other phase of human activity, emotion, thought, knowledge, endeavor or conjecture-when Henry Vollmer was not ready with a speech; nor is there such an instant now. All that is needed to get Henry Vollmer to make a speech is the merest hint-the wave of a hand, or the slight inclination of a head, or the wink of an eye-and he will make one or two or three. The most minute provocation will set him going, and it takes an ax to stop him!

That is not what I am trying to say, however. He will speak, and he has spoken and does speak. Moreover, he will quote. It is well within the bounds of conservative statement to assert that Henry Vollmer can give almost any person of your acquaintance a handicap of two full acts of any Shaksperean play, say, and beat that person to the final curtain by several scenes. Moreover, he will do his quoting with great declamatory effect.

You see, he is by way of being a lifelong student of declamation and elocution. He began early. They say that when he was a mere toddling child his spirited rendition of "Mary had a little lamb" was the pride of the entire neighborhood. As he progressed and, on Friday afternoons in the schoolhouse, ripped into "Ye call me chief; and ye

do well to call him chief"-and so on-the farmers all came in to listen and applaud, except at such time as the corn crop demanded their attention to the exclusion of patronage of the rhetorical arts.

He made his first political speech when he was aged seventeen. He was then a Democrat, as he is now; and he mounted a convenient rostrum and defended the immortal principles of Thomas Jefferson in such a manner that the almost solid Republican neighborhood concluded he would come to no good end. Since that time he has made political speeches and all other kinds of speeches; and not long thereafter he became aware that he was gradually becoming the custodian of a speech that could not possibly be emitted save at a moment not only opportune but auspicious.

It was no sudden growth—a thing, rather, of deliberate development; slow, but sadly sure. Phrase by phrase, metaphor by metaphor, simile by simile, that speech grew within him, crowding him in the speech cavity, urging for utterance-almost suffocating him at times. He strove to find a place for it, but none was found. He sought on every rostrum and on every stump for the proper surroundings and the right audience for this masterpiece that was jammed into a conglobulate mass of flowers of language in is interior. None came!

He was doomed to wander over the face of Iowa, searching for surcease and finding it not. The speech stuck! He could get it neither out nor off.

So presently it came to him that the only proper place for the utterance of that speech, which was clamoring within him for a chance to ravish the ears of men, was in Congress. Congress! That was the solution! There, in the House of Representatives, in that forum of free and untrammeled discussion, debate and denunciation, would be ample, adequate and appropriate surroundings. The great men of the nation would be auditors. The galleries would be crowded with eager citizens, come to listen to this wonder of words—this marvel and model of magnetic manifestation. The reporters would send it in all its tralatitious glory over myriad wires into the homes of the people.

Congress was the place-Congress! And he ran for Congress, seeking to relieve himself of this burden of suppressed speech. He ran for Congress; but-alas, for the lack of consideration of the hardy Iowans for the sufferings of a fellow creature!—he was beaten. He did not get

the votes. They kept him at home. And again he began his search for the opportunity, delivering many speechesbut not, of course, the speech.
Years passed. Henry Vollmer was still obsessed of his

speech. Try as he might, he could not fit it to the circumstances that environed him; but he did not despair. Henry Vollmer did not despair! He kept the faith and the quest. Also, he kept the speech.

Then came a vacancy in Congress from his districtonly a few months ago this happened and all these years Henry Vollmer had been awaiting-nay, seeking-his chance!

He secured another nomination to Congress to fill this vacancy, and he was elected.

What did Henry Vollmer do? How can you ask? He hopped on the first train for Washington, presented his cre-dentials, and was sworn in. Then, bursting with the speech that had struggled within him for expression for such a weary space of time, he got up on about the second day of his service and turned it loose.

I cannot give it all; but here is the section that harassed him most for delivery—the slug he had treasured so long in order that its ripe perfection might not fall on unappreciative ears, or be spoken in a theater inadequate to its verbal requirements and dignity-here is the choicest gem from Hank's long-cherished speech:

The rolling prairie between the fortieth and forty-fourth parallels of north latitude, which is folded in loving embrace by the limpid silver of the Father of Waters on the east and the tawny gold of the Big Muddy on our western slope, is the Garden of the Lord which, in the liquid music of the Indian tongue, was appropriately named "Iowa—beautiful land!"

And what was the result? Being a truthful chronicler of events, I can only say—much as it pains me—that his hearers mostly laughed!

#### **Proof Positive**

THE late Arthur McEwen used to tell of an Irish friend of his who made the statement that the sun is composed of ice and proved it.

"Th' sun do be made av ice," he said.

"'Tis not!" contended a hearer.

"'Tis so; an' I'll prove ut t' ye. Wuz ye iver in th' Comstock mine?"

"I wuz."

"Wuz yez at th' twenty-three-hundred livil?"

"I wuz.

"An' wuz it hot?"

"Hot as th' divil!"

"Well, thin, go out an' have a luk at th' tops av the mountains yonder-all covered with ice an' snow. The nearer to the sun it is, the colder it is; an' the farder away, th' hotter. Th' sun do be made av ice!"

#### Telling It in Latin

CERTAIN Mississippi statesman was once a member A of a state constitutional convention at Jackson. He was much more devoted to poker than to his duties as a constitution maker, and he lost regularly each night more than the state paid him each day for his labors.

One morning, after a hard session over the poker table, he met a friend and began denouncing himself for being such an idiot as to remain in Jackson where his expenses

were so high.

"What's the matter with you?" asked this friend, who was from a back county and who was salting down most of his pay. "What ails you? Ain't you gittin' your per diem

per day?"
"Yes," the poker player replied," I am getting my per diem per day all right; but the trouble is I am not getting my per noctem per night!"

#### Suffering by Proxy

CENATOR HUGHES, of New Jersey, was worried to O distraction by the importunities of a person who had a grievance against the Interior Department.

The senator called up Secretary Lane, who had been worried by the same person.

"Will you listen to his story?" asked Hughes over the telephone.

"I will not," Lane replied.
"Well, then," urged Hughes desperately, "will you appoint some one to hear the story?'

"Yes," answered Secretary Lane, "I appoint you," and

#### Superman

Miss Birdsong stepped out of a gold-and-mauve hallway, through a grimy side door and into an area as black as a pit; and out from its blackest shadows a figure rose to "Joe!"

"Yeh; where's Loo and Harry?"

"Yen; where's Loo and Harry.
"I dunno; they—they went on."
"Hurry up, Beauty. I ain't so much of a favorite round this theater that I can bask in this sunny spot."
"I didn't mean to keep you waitin' so long. Ine."

long, Joe."
"Believe me, you're the foist little girl
I ever hung round an ushers' exit for."

"Honest, am I, Joe?"

"Surest thing! The stage door is my pace and for nothing short of headliners, neither. I gotta like a girl pretty well to hang round on the wrong side of the footlights for her. Sweetness."

lights for her, Sweetness."
"Joe, I—I wish I knew if you was kiddin'."

"Kiddin' nothin'!"

They emerged into the white shower from a score of arclights; and Mr. Joe Ullman, an apotheosis of a classy tailor's dearest dream, in his brown suit, brown-bordered silk handkerchief nicely apparent, brown derby hat and tan-top shoes, turned his bulldog toes and fox-terrier eyes to the north, where against a fulvous sky the Palais du Danse spelled itself in ruby and emerald incandescents with the carefully planned effect of green moonlight floating

"Joe," she dragged gently at his coat sleeve and a warm pink spread out from under the area of rouge; "Joe, you know what you promised for to-night?"

"What kiddo? The sky's my limit. I'll

"What, kiddo? The sky's my limit. I'll taxi you till the meter gives out."
"You have promised so long, Joe. Come on! Let's go up home to-night. Be a sport and let's go. Maw's got a midnight supper waitin' and ""

waitin', and ——"
"The doctor says home cookin's bad for me, Sweetness

He cocked his hat slightly askew, stroked a chin as blue as an actor's and winked down at her.

"Honest, Sweetness, I'm going to buy
you a phonograph record of Home Sweet
Home Ain't Sweet Enough For Me ——"
"She's waitin' up for us, Joe: she ain't
hardly able to be up, but she's waitin',
Joe."

Joe."
"Ain't I told you I'm going up with you some night when I'm in the humor for it? I feel like a ninety-horsepower dancer to-night, Ess. Whatta you bet I sold more seats for your show to-night than the box office? Whatta you bet?" "Joe—you promised."

"Sure, "Sure, and I'm going to keep it; but I'm wearin's celluloid collar to-night, Hon, and the fireside ain't no place for me. I wouldn't wanna blow your mamma to smithereens."
"Joe!"
"I wouldn't—honest, Sweetness, you know I wouldn't."

"Joe, comin' to our house ain't like bein' company—honest! When the boys and girls from the store used to come over we'd roll back the carpets, and maw'd play on an old comb and Jimmie'd make a noise

like a banjo and——"
"Hear! Hear! You sound like Way
Down East gone into vaudeville."

Down East gone into vaudeville."

"Come on up to-night, Joe—like you promised."

"We'll talk it over a little later, Sweetness, Midnight ain't no time to call on your best garl's dame. What'll she be thinkin' of us buttin' in there for midnight supper? To-marrow night's Sunday—that'll be more like it."

"She not it woiste' for us. Toe. All works."

'She got it waitin' for us, Joe. All week she been fixing every night and us not comin'! She knows it's the only time we got. Joe. She says she'd rather have us come home after the show than go kitin' round like this. Honest, Joe, she's a regular man a south hereal? She says a known than the she'd the she'd that the lar good sport herself. She used to be the life of her department; the girls used to laff and laff at her cuttings up. She's achin' to see you, Joe. She knows I-we-she don't talk about nothin' else, Joe; and she's sick—it scares me to think how sick maybe she is." He leaned to her upturned face; tears trembled on her lashes and in her voice. "Please, Joe!" "To-morrownight, sure, little Essie Bird-

What a name! Why didn't they

"They always used to call us the song-birds at the store."

"Look, will you? Read—Tango Contest next Monday night! Are you game, little one? We'd won the last if they'd kept the profesh off the floor. Come on! Let's go in and practice for it."

"Not to night for please. We're only

"Not to-night, Joe, please. We're only four blocks from home and it ain't right our keepin' company like this every night for three months and not goin'. It ain't right! You know it ain't."

He paused in the sea of green moonlight before the gold threshold of the Palais du

Danse, whose caryatids were faun-eyed mænads and Ægipans.

The gold figure of Cybele in a gold chariot raced with eight reproductions of herself in an octagonal mirror-lined foyer, and a steady stream of Corybantes bought admission tickets at twenty-five cents a Corvbant.

Phrygian music, harlequined to meet the Phrygian music, harlequined to meet the needs of Forty-second Street and its anchorets, flared and receded with the opening and closing of gilded doors.

"Come on, girlie! To-morrow night we'll do the fireside proper."

"You never—nev-er do nothing I ask you to, Joe. You jolly me along and jolly me along, and then—do nothing."

He released her suddenly, plunged his hands into his pockets.

He released her suddenly, plunged his hands into his pockets.

"I don't, don't I? That's the way with you girls—a fellow ties hisself up like a broken arm in a sling and that's the thanks he gets! Ain't I quit playin' pool? Didn't I swear to you on your little, old Sunday-school book to cut out pool? Didn't the whole gang gimme the laff? Ain't I cuttin' everything—ain't I?—pool and cards—pool and all?"

"I know. Joe: but ——"

"I know, Joe; but -

"I know, Joe; but ——"
"You gotta quit naggin' me about the fireside game, sis. I'm going to meet your dame some day—sure I am; but you gotta let me take my time. You gotta let me do it my way—you gotta quit naggin' me! A fellow can't stand for it."
"She's sick. Joe."

"She's sick, Joe."
"Sure she is; and to-morrow night we'll buy her an oyster loaf or something and take it home to her. How's that, kiddo?"
"That sin't what she wants Joe. it's

That ain't what she wants, Joe-it's

"I just ain't homebroke-that's all's the "I just ain't nomebroke—that's all's the
matter with me. Put me in a parlor and I

#### Wilson Bros Athletic Union Suit Licensed under the

Klosed-Krotch Patents

THE union suit that laughs at strains. A shapely, sturdy garment. The crotch is permanently closed as in a well-fitting pair of drawers and depends on no button to keep it closed. Most sensible, comfortable and convenient. No edges or buttons between the legs. Can't gap or bunch up. Always orderly and smooth. Separate open-ings front and rear. Wilson Coros Athletic Union Suit is the only garment of its kind licensed under the Klosed-Krotch patents. \$1.00 and up for men; 50c and up for boys. All suitable woven fabrics.

> Other fumishings bearing the Wilson Coros mark of quality include Shirts, Gloves, Hosiery, Suspenders, Neckwear, Handkerchiefs, etc.

### Wilson Bros Combinette Pajama

Licensed under the

Klosed-Krotch Patents

Another new wrinkle in closed crotch comfort. A one-piece palama. No drawstring. Waist freedom. Easy to actual. Convenient. Dignified appearance. Has same patented closed crotch as above. In soft, well-patterned labrics—\$1.50 and up. At your furnisher s.

Wilson Bros Chicago

"Say, whatta you know about that! There's that same blonde girl, Joe, we been seein' everywhere. Honest, she follows us round every place we go—her and that fellow that was dancing up at the Crescent last night—remember?"

They drew up before a marble-topped table, one of a phalanx that flanked a wide-open space of hardwood floor, like coping round a sunken pool; and his eyes took a rapid resume of the room.

"Good crowd out to-night, Sweetness. They all know us too." "Yes."

"Wanna dance and show 'em we're in condition?

"No, Joe."

The music flared suddenly; chairs were pushed back from their tables, leaving food and drink in the attitude of waiting. bolder couple or two ventured out on the shining floor space, hesitant like a premonitory ripple on the water before the coming of the wind; another and yet another. And almost instanter the intricate maze of a crowded floor—women swaying; men threading in, out, around. "What'll you have to drink, Sweetness?" "Lemonade, please." "I know a better one than that."

"Condensed milk!"

"Silly! I just can't get used to them bitter-tasting things you try out on me." "You're all right, little Lemonade Girl!"

He leaned across the table and peered under the pink sateen. Its reflection lay like a blush of pleasure across her features and she kept her gaze averted, with a pretty malaise trembling through her. "You're all right, little Peaches and

Cream."

"You-you're all right too, Joe."

"You mean that, Sweetness?" I mean it if you mean it."

"Do I mean it? Say, do I give a little queen like you my company eight nights out of seven for the fun of kiddin' myself along?"
"Iknowyou don't, Joe; that's what I keep

tellin' maw."

"Sittin' there screwing your lips at me like that! You got a mouth just like—just like red fruit; like a cherry that would bust all over the place if a bird took a peck at it."

Her bosom, little as Juliet's, rose to his words, and she giggled after the immemorial fashion of women.
"Oh, Joe! If only—if only—if only—
"If only what, Sweetness?"

"If only -

"Aw, I can't say it."
"Whistle it then, Sweetness."

"It don't do us no good to talk about these things, Joe. We—we never get any-

"What's the use o' talking then, Sweetness? Here's your lemonade. I wish I was in the baby-food class—'pon my soul I do! Look, Sweetness; this is the stuff, though. Look at its color, will you? Red as a moonshiner's eye! Here, waiter, leave that siphon; I might wanna shoot up the place."

"You promised Joe not ——"

siphon; I might wanna shoot up the place."

"You promised, Joe, not ——"

"Sure; I ain't goin' to, neither. Did I keep my pool promise? Ain't heard a ball click for weeks! Will I keep this one? Watch! Two's my limit, Peaches. I'd swear off sleepin' if you wanted me to."

"Would you, Joe? That's what I want you to tell may when ——"

"Aw, there you so again! Honest the

"Aw, there you go again! Honest, the minute a fellow feels hisself warming up inside you begin tryin' to reach up to the church tower and ring the bells."

"Sure you do." "You make me ashamed when you talk

like that."
"Then cut it, Sweetness. Come on; let's

finish out this dance."

"It worries her so, Joe. She asks and asks till I—I don't know what to say no more, when I see her wastin' away and all. I—I don't know!"

"Don't leak any tears here, Ess! This gang here knows me. Ain't I told you I like you, girl? I like you well enough to do anything your little heart de-sires; but this ain't the place to talk about it." "That's what you always say, Joe; no place is the place."

"Gee, ain't it swell enough just the way we are—just like it is, us knocking round together? I ain't your settling-down kind, sister. You're one little winner and I like your style o' sweetness, but I ain't what you'd call a homesteader."

"Sure; I mean it. I like you well enough

"Sure; I mean it. I like you well enough to do any little thing your heart desires; but I never look far ahead, Hon. I'm nearsighted."

"What—what about me?"

"I ain't got nothing saved up—not a dime. You tell your dame—you tell her we—we just understand each other. Huh? How's that? That's fair enough to all, ain't it?"

"Whatta you mean Joe? You always.

"Whatta you mean, Joe? You always say that; but please, Joe, please tell me what you mean?" "Listen, kiddo! Say, listen to that trot

they're playin', will you? Come on, sis; be a sport! To-morrow night we'll talk about anything your little heart desires. Come on; one round! Don't make me

"Aw, no, Joe; I gotta go." "One round, Sweetness-see, I'll pay the

check. See, two rounds round and we'll light out for home. Look, they're all watchin' for us—two rounds, Sweetness, just two rounds!"
"One you just said, Joe."

"One then, little mouse.

They rose to the introductory titillation of violins; she slid into his embrace with a little fluid movement and they slithered out on the shining floor. A light murmur like the rustle of birds' wings went after them and couples leaned from their tables to watch the perfect syncopation of their steps. His eyes took on the sheen of mica; the color ran high in her face and her lips

parted.
"They sit up and take notice when we slide out, don't they, little one?"

"Some class to my trotting, ain't there, Sweetness?" "Yeh. Look, Joe; we gotta go after this round—it's nearly twelve."

"Twice round, Sweetness, and then we go. If we ain't got the profesh beat on that Argentine Dip I'll give ten orchestra seats to charity and let any box office in this town land me for what I'm worth." "Joe!"

"Aw, I was only kiddin'. They got as much chance with me as a man with Saint Vitus' dance has of landing a trout. Gee, you're pretty to-night, Sweetness!" "Sweetness yourself!"

"Peaches and Cream!"

"Come on, Joe; this is twice round."

"Once more, Sweetness—just once more! See, you got me hypnotized; my feet won't stop. See, they keep going and going. See, I can't stop. Whoa! Whoa! Honest, I can't quit! Whoa! We gotta go round once more, Sweetness. I—just—can't—stop!"

"Just once more, Joe."

At one o'clock the gas flame in the hall-way outside the rear third-floor apartment flared sootily and waned to a weary bead as the pressure receded. Through the opacity of a sudden fog the formal-faced door faded into the gloom and Miss Essie Birdsong pushed the knob stealthily inch by inch to save the squeak.

"Plunk - plunk - plunka - plunka - plunk -plunk! Essie?"

"Sh-h-h! Yes, Jimmie—it's only me.
Why you makin' that noise? Why's the
light burning? What's——"
"Essie! Essie, is that you and——"

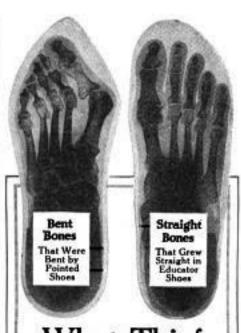

"Maw dearie—you — What's the matter? You ain't sick, are you? What's—what's wrong, Jimmie? Please, what's wrong?"

She stood with her back to the door, her face struck with fear suddenly, as with white forked lightning, and her breath coming on every alternate heartheat.
"Maw! Jimmie! What's the matter?
Is maw sick again?"

The transitional falsetto of her brother's voice came to her gritty as slate scratching slate, and cold prickly flesh sprang out over

"Don't come in here! You-you and your friend stay out there a minute till maw kinda gets her breath back; she—she's all You and your right-ain't you, maw? friend wait just a minute, Ess."

"Yeh; both of you wait. Nothing ain't wrong—is it, maw? There, just lay back on the pillow a minute, maw. Gwan; be a sport! Look, your cheek's all red from restin' on my shoulder so long. Lemme go a minute and bring Essie and her gen'l'man friend in to see you. Gee! After you been waitin' and waitin', you—you ain't goin' to give out the last minute. There ain't nothin' to be scared about, maw. Lemme go in just a minute. Here it is, maw;

### What Thief Steals 20% Your Efficiency?

AFTER five years investigation, the U. S. Army discovered that the pointed shoe is that thief.

And they adopted a shoe of the Educator type, which, it has been proved, will save that

20% of energy.

If you have a headache or cold your efficiency is at least 20% below par. In like manner, if you have coms, bunions, ingrowing nails, flat foot—the ills which pointed shoes make—you are worth only about 80% of your real fighting self. Get your whole family (men, women,

children) into roomy, good-looking Educators—today. \$1.35 to \$5.50. See that EDUCATOR is branded on

the sole. That name guarantees you the correct orthopædic shape which allows your feet to grow as nature intended.

#### "Freak Shoes Make Frantic Feet"

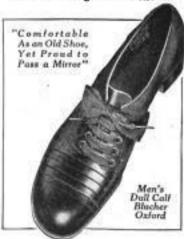

is a new book in which two New York orthopædic specialists tell you how to walk, and how to have straight-boned, healthy feet. Simple language. Free. Send for a copy today. Leading shoe stores everywhere sell

ducators. If you have any trouble finding them, write us.

old man Gibbs; lemme ——"
"Oh, no, you don't! Lizzie Marks downstairs is gone for him—but that ain't goin'

stairs is gone for nim—but that ain t goin to help none; what she wants is you—you and your low-down sneaking friend; and she's goin' to have him too."

"He's gone, Jimmie. What——"

"You can't come home here to-night without him—you can't! You better run after him, and run after him quick. You can't come home here to night without him. can't come home here to-night without him, it—huh? Whatta you going to do about What?"

She trembled so she grasped the back of a chair for support and tears trickled down

her cheeks.
"I can't, Jimmie! He's gone by now;
he's gone by now—out of sight. I can't!
Please, Jimmie! I'll tell her! I'll tell her!

Don't—don't you dare come near me! I'll go, Jimmie—I'll go. Sh-h-h!"
"You gotta get him—you can't come here to-night without him. I ain't goin' to stand for her not seeing him to-night. I-I don't care how you get him, but you ain't going to kill her! Get him or I'll ——" "Jimmie—sh-h-h!"

"Jimmie, tell him it sin't like me to give out like this. Tell ——" "Yes, maw."

"Yes, maw-we're comin'. Joe's waitin' down at the door. I'll run down and bring him up; he—he's so bashful. In a minute, maw darlin'!"

She flung open the door and fled, racing down two flights of stairs, with her steps clattering after her in an avalanche, and out into a quiet street, which sprung echoes

of her flying feet.

After midnight every pedestrian becomes a simulacrum, wrapped in a black domino of mystery and a starry ephod of romance.

A homeward-bound pedestrian is a faun in evening dress. Fat-and-forty leans from her window to hurtle a can at a night-

yelling cat and becomes a damozel leaning out from the gold bar of Heaven. In the gloom of the street occasional silhouettes hurried in silent haste; and a block ahead of her, just emerging into a string of shop lights, she could distinguish the uneven-shouldered outline of Joe Ull-man and the unmistakable silhouette of his slightly askew hat. She sobbed in her throat and made a cup

of her hands to halloo; but her voice would not come, and she ran faster. A policeman glanced after her and struck

the asphalt.

A dog yapped at her tall heels. Even as she sped, her face upturned and her mouth dry and open, the figure swerved suddenly into a red-lighted doorway vita a crescent burning above it; and, with her

eyes on that Mecca, she pulled at her strength and gathered more speed. The crescent grew in size and redness, and its lettering sprang out; and suddenly she stopped, as suddenly as an engine jerking up before a washout.

CRESCENT POOL AND BILLIARD ROOM OPEN ALL NIGHT

And her heart folded inward like the petals of a moonflower. Stretched to the limit of their resilience,

the nerves act reflexly. The merest second

of incertitude and then automatically she swung about, turned her blood-driven face

swung about, turned her blood-driven face toward whence she came and groped her way homeward as if she were blind. Tears hot from the geyser of shame and pain magnified her eyes like high-power spectacle lenses; and when she reached the dim entrance of the cliff dwelling she called home an edge of ice stiffened round her heart and her feet would not enter. A silhouette lurched round a black corner and zigzagged toward her, and she held

and zigzagged toward her, and she held herself flat as a lath against the building until it and its drunken song had lurched round another corner; a couple hurried past with interlinked arms and their laughter was as light as foam. More silhou-ettes—a flat-chested woman, who wore her shame with the conscious speciousness of a prisoner promenading in his stripes; a loutish fellow, who whistled as he hurried and vaulted up the steps of the Electric Institute three steps at a bound; an old man with an outline like a crooked finger; a shawled woman; a cab lined with vague faces, with streamers of laughter floating back from it; and, standing darkly against the cold wall, Essie with the tears drying on her cheeks and her whole being suddenly galvanized by a new thought.

A momentary lull in the drippy stream-

let of pedestrians; she leaned out into the darkness and peered up, then down the aisle of street. A shadow came gliding toward her and she stepped forward; but when the street lamp fell on the cold eyes and cuttlefish stare she huddled back into her corner until the steps had receded like the stick-taps of a blind man.

Two women in the professional garb of nurses twinkled past, twittering each to each

nurses twinkled past, twittering each to each like sparrows; a man whose face was nar-row and dark, betraying in his ancestry a atin breed, kept close to the shadow of the

With her finger nails cutting her palms, she stepped out from her lair directly in his path and clasped her hands tighter to keep them from trembling.

"You—please!"

He glanced down at her yellowish face,
with the daubed-on red standing out frankly, tossed her a sneer and a foreign expression,

and brushed by. She darted back as though he had struck at her, and panic closed her in. A young giant, tall as a Scandinavian out of Valhalla, with wide shoulders and a wide stride, and heavy-soled, laced-to-the-knee boots that clattered loudly, ran up the steps of the Electric Institute, and she flashed across the sidewalk, her arm reaching out. "You—please!"

He paused, with the street lamp full on his smiling mouth and wide-apart, smiling eyes, one foot in the act of ascending, after the manner of tailors' fashion plates, which are forever in the casual attitude of mount-

"You—please! Please——"

"Aw, little lady, go home and go to bed.
This ain't no time and place for a little thing like you. Here, take this and go home, little girl."

She arrested his arm on its way to his pocket, her breath crowding out her words and the stinging red of shame burning through her rouge.
"No, no! For Gawd's sakes, no! It's-

my mother ——" He brought his feet down to a level.

Your mother? "Yes; she's sick-maybe dyin'. I please-she wants to see somebody that can't-can't

"What, little lady?" "She's sick-dyin' maybe. She wants to ee somebody that can't—can't——"
"Take your time, little lady—can't

what? Can't come."

"Who can't come?"

"He—my young—he's my—a young man. She's never seen him; and if—please, if you'd come and act super—just like you was fillin' in at a show; if you'd act like oung man just for a minute-My friend, he can't come-he can never come; but she-she wants him. You come, please! You come, please!

She tugged at his arm and he descended another step and peered into the exacer-bated anxiety of her face.

"On the level, little lady?"

"Please—just for a minute! For some-body that's sick—maybe dyin'. Just tell her you're my young man-tell her everything's all right-everything's comin' all right for all of us; for her and-and my little brother, and-and me-you and melike you was my young man, please, lovin'

and all. And tell her how pretty her poor hair is and how everything's goin'—goin' to be all right. Come, please—it's just next door."

"Why, you poor little thing! I ain't much on play activ', and leak at ain't

much on play actin'; and look at my hands-all black from the power house!"

"Please! That ain't nothin'. It'll be only a minute. Just kinda say things after me and don't let her know-don't let her me and don't let her know—don't let her know that I—I ain't got any young man. Don't let her know!"

"You poor little thing, you—shaking like a leaf! Lead the way; but not so fast, little lady—you'll give out."

She cried and laughed her relief and

dragged him across the sidewalk; and every step up the two flights she struggled to keep her hysterical voice within the veil of a

whisper.
"Just say everythin' right after me. You—you're my young man and real sweet on me; and we're going to get-you know; everythin' is goin' to be fine and my little brother's going to the Electric Institute, and everythin's goin' to be swell. Be right lovin' to her, sir—she's so sick. Oh, Gawd, I ——"

"Don't cry, little girl."
"I ain't cryin'."
"Careful; don't stumble."

"Don't you stumble. Can you see?
The landing's so dark."
"Yes; I can see by the shine of your hair, little lady."
"Sh-h-h-h!"

The door stood open at the angle she had left it, and by proxy of the slab of mirror over the mantelpiece she could see her mother's head propped against her brother's gold-braided shoulder and the bright eyes shining out like a gazelle's in the dark.

"Essie?"
"We are here, maw—me and Joe." She
threw a last appeal over her shoulder and
led the way into the bedroom; her companion followed, stooping to accommodate his height to the doorway.

"Maw dearie, this is Joe."
"Joe! It ain't like me, Joe, not to get up; but I just ain't got the strengthto-night, Joe. He bent his six-feet-two over the bed

and smiled at her from close range.
"Well, well, well! So this is maw dearie!"
"That's her, Joe."
"This won't do one bit, maw. Me and the little lady's got to get you cured up in a hurry—don't we, little lady?"
"Maw dearie, Joe's been wantin' and wantin' to come for so long."

'For so long I been wantin' to come,

maw dearie; but ——"
"But he's so bashful. Ain't you, Joe?

bashful as a banshee. "Bashful ain't no name for me, maw. I'd

shy at a baby."
"Honest, maw dearie, he's as shy as

anything."

"If I wasn't, wouldn't I have been up to see my little lady's mother long ago—wouldn't I? Ain't you going to shake hands with me, maw dearie?"

She held up a hand or light as a leaf and

She held up a hand, as light as a leaf, and he took it in a wide, gentle clasp that enveloped it.

"Maw dearie!"

Her violet lids fluttered and she lay back from the gold-braided shoulder to her pillow, but smiling.
"I like your hand, Joe: I like it."

"I want you to, maw.

"We-I was afraid, Joe, I wouldn't, you never comin' at all. Shake it, Jimmie, and

see.
"It's a strong hand, like your papa's was, Essie. Shake it, Jimmie. I feel just like cryin', it's so good. Shake it, Jimmie."

Across the chasm of youth's prejudice Jimmie held out a reluctant hand. "And this is the big brother is it, little

lady?"
"That's what he calls hisself, Joe—he

calls me his little sister."
"He's gotta be a big brother to her, Joe;

she's so—so little.

"Shake, old man; and take off that grouch. Over where I live a fellow'd be fined ten cents for that scowl. If we got anything to square, you and me'll square it outside after school. What do you say to that, maw dearie? Ain't it right?"

"Jimmie's tired out, Joe."

"Like fun I am!" "He's been proppin' me up all these hours so I could breathe easier-plunkin' and doin' all his funny kid stunts for his old maw, Essie—plunkin' like a banjo, and plunkin'. I liked it. Sometimes it was like I was floatin' in a skiff, with your papa, on Sunday afternoons in the park, Essie. I liked it. He's all tired out—ain't you, Jimmie, my boy?"
"Naw!"

"He's sore at his sister, Joe. But he's a good boy and smart! You wouldn't believe it, Joe; but when it comes to mechanics he—he's just grand!"

"Aw, cut it, maw! I ain't strikin' to make a hit."

"He's only tired, Joe, and don't mean nothin' he says."
"Naw; I'm only tryin' my voice out for

grand opery!" "You're a regular sorehead with me, ain't you, old man?" "Aw!"

"He ain't easy at makin' up with strangers, Joe; but he's a smart one. See that on the table? That's his self-chargin' dynamo; it's a great invention, Joe, the janitor says. You tell him about it, Jimmie."

"There ain't nothin' to tell."
"Don't believe it, Joe; the janitor's a electrician and he says -"Aw!"

"See! There it is, Joe."

"Aw, I don't want everybody pokin' and nosin'!"

"Lemme have a look at it, old man.

"Lemme have a look at it, old man. I know something about dynamos myself. Say, that looks like a neat little idea. How does she work?"

"See—you generate right down in here. See? She worked that time, maw."

"Jimminycracks! Where'd you get your juice and — Well, well! Whatta you know about that? Don't even have to reverse. I guess that storage down there ain't some stunt!"

ain't some stunt!"

"See, Jimmie, my boy! I told you it was a grand invention. Hear what Joe says?"

"Say, kid, you bring that—take that over to the Institute to-morrow. I know a fellow over there'll protect your rights and

fellow over there'll protect your rights and work that out with you swell." "See, Jimmie, your—your old maw was right!"

"Aw, the generator don't always work like that—only about four times out of six.

I'm kinda stuck on the -"Say, kid, what you wanna do is protect your rights on that, and—and bring it over—take it over to the Institute. You'll give 'em the jolt of their lives over there. I know a fellow's been chasin' this idea ten years, and you're fifty per cent closer to the bull's eye than he is

"Hear, Jimmie! Hear, Essie! Just like I been sayin'. I been beggin' and beggin' him, Joe; but he—he's so stubborn; and-

"Aw, maw, cut it, can't you?"
"He's so stubborn about it, Joe."

"There's no use tryin' to force him, maw; but he's gotta good idea there if he handles

"Aw, she ain't finished yet—she don't work right."

"That's what I'm tellin' you, kid. What you need is a laboratory, where you've got the stuff to work with and men who can give you a steer where you need it, and -"Aw!"

"I'll go over with you. I know a fellow over there—he's the guy that helped Kinney win his transmitter prize. You'll give him the joit of his life, old man. Huh, kid? Wanna go over?" He placed his hand on the gold-braided shoulder and smiled down. "Huh? You on, old man?"

"Aw, I ain't much for buttin' in places." "Are you on, Jimmie? It's your chance,

"Are you on, Jimmie: It's your chance, old man."
"Aw!"
"Jimmie! Jimmie, my boy, I \_\_\_\_"
"Aw, I said I was on, didn't I, maw?"
"Sure, he said he was on, maw dearie.
Shake on it, old man!"
"Jimmie! Jimmie, my boy—honest!—

it's just like your papa was talkin'! Don't leggo my hand, Joe. Layin' here with my eyes shut it's just like he was talkin' hisself. He's-he's like your papa was, Essie, big

and strong."
"Yes, darlin'."
"Is that the doctor? Is Lizzie Marks

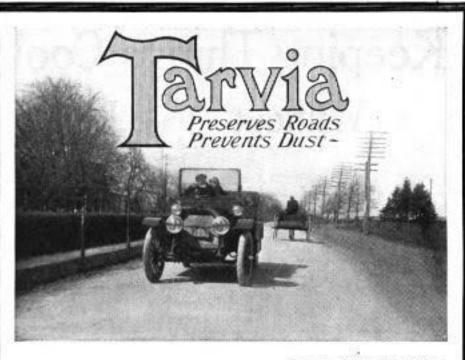

"No; not yet, maw."
"You're all tired out, Essie baby, aren't you? Look at your little face! Go wash it, baby, and cool it off before old man Gibbs

"It ain't hot, maw."

"He brought you into the world, Essie baby, and I don't want him to see it—to see

it all \_\_\_\_\_'
"I'm all right, maw. Lemme stay by

"Go wash your face, Ess. Maw says go wash your face."

A dustless Tarvia-treated Road, Middletown, R. I.

### A cure for dusty roads-Tarvia

DON'T you often find the fun of a ride or a walk through the country marred by the dust?

Aren't there days when you are fairly choked with the clouds raised by passing automobiles, your shoulders white with dust, your clothes all but ruined?

And haven't you seen that dust float over the lawns into fine homes, making the verandas uninhabitable and ruining costly furnishings?

And did you ever notice how rain on a grade gullies out the side of the macadam, making it rough as the rocky road to Dublin, necessitating costly repairs?

By way of contrast, how would you like to live in a township that bonds its macadam with Tarvia?

The roads then are dustless, mudless, smooth—the air is pure and clean-the adjacent lawns green and fresh, and you can ride or walk in comfort.

What's the use of paying taxes to maintain roadways that not only create a nuisance but don't stand the stress of modern traffic?

If your town isn't a Tarvia town yet, why not get after the local road authorities till they make it one!

There's economy as well as civic beauty in tarviated roads.

Booklets regarding the Tarvia treatment free on request.

## Keeping Things Cool

Without o lce For 6 to 10 cents per day

TEVER again need you buy ice for any purpose. The little machine on top of the refrigerator and the cooling radiator inside have solved this vexing problem.

When equipped with the Germania System of Refrigeration, your refrigerator will preserve food perfectly for weeks in pure, dry airuniformly cold - at any temperature desired, down to zero.

The Germania System does away with the ice man entirely, and eliminates the many consequences of impure ice. It is impossible for mold to form even on cooked foods in the cold, dry air produced by the Germania System.

The Germania System makes pure ice for the table, freezes ices and parfaits, and cools the water pipes. The price of installation is reasonable, and the cost of operation is only 6 to 10 cents per day.

Cold storage experts agree that meats, vegetables and other foods can be most satisfactorily preserved at a point just above freezing, in air that is uniformly cold and dry, and where the temperature does not fluctuate.

Are you able to maintain a uniform temperature in your refrigerator? Do you get the temperature as cold as should be ?

The distinctive features of the Germania System of Refrigeration are these:

The Germania System produces dry, cold air, by collecting and freezing the natural moisture in the atmosphere. It maintains any uniform temperature desired, dozum to zero. You can regulate the degree of cold to suit your requirements.

The Germania System, as here illustrated, is based on the same principle used in cold storage plants, in large packing houses and in the most modern hotels, where food stuffs must be kept for weeks, - because this system of dry air refrigeration has been proved most efficient and most economical for keeping perishable foods in prime condition.

The Germania System is the result of

twenty years' effort to produce a simple, compact refrigerating device at a low cost. It can be easily installed in connection with any refrigerator-either on top of the refrigerator or in the basement of the home.

It is silent and automatic in operation. There are no valves to twist, no adjusting — nothing to get out of order. Start or stop it by turning a switch. It is lit-erally "fool-proof". This system is to be operated 6 to 8 hours per day. Our small size residence

machine has a capacity equal to 350 lbs. of ice every 24 hours.

We make larger sizes for apartment houses, hotels, clubs, sanitariums, gro-cers, butchers, druggists, florists, and all others requiring economical and efficient refrigeration.

Send For This Book

Whether you desire the Germania System for your residence or place of business, or wish to become the general representative of this company in your city, it will pay you to read the very interesting book—"Keeping Things Cool Without Ice."

Please fill out and send the coupon today. You'll get the book by return mail.

"You shut up, Jimmie Birdsong—it ain't your face!

"You know all righty, missy, why she wants you to wash it-you know

"Maw, he keeps fussin' with me! Jimmie, please don't.

"Aw, I ain't neither, maw. She's al-ways peckin' at me. I—I ain't mad at her; but I want her to wash that—that stuff off her face."
"Jimmie!"

Her lips quivered and she glanced toward the stranger, with her lids drooping over her eyes like curtains to her shame; and he smiled at her with eyes as soft as spring rain, and his voice a caress.

"Go, little lady. You're all tired out and too pretty and too sweet not to wash your face and—cool it off."
"She's gotta go or I'll get her in a corner

and rub ----' Honest, the minute we make up you begin pickin' a fuss

"Oh, my children!"
"Oh, there she goes off again! Why
don't old man Gibbs come? Lay her down, Joe; she can't breathe that way. Look!

Joe; she can't breathe that way. Look! Her hands are all blue like. Hold her up, Joe; Oh, why don't old man Gibbs come? She's all shakin'—all shakin'!"

"No, I ain't. What you cryin' there at the foot of the bed for, Essie? It ain't no time to cry now, darlin'. It's like it says on the crocheted lamp mat your papa's aunt did for us—God is Good! Where is that mat, Essie? I—I ain't seen it round for—so—long. God is good! God—is—good! Where is that mat, Essie?"

"It's round somewheres, maw. It's old and worn out—in the ragbag, maybe."

and worn out—in the ragbag, maybe.'
"We'll get it out, Essie."

"Yes, maw.

"Promise, Essie!"

"Sure, maw; we'll get it out and keep it

"Oh, Joe, why did you keep us waitin' and waitin'? She's so little and pretty. Look at her dimples, Joe, even when she's

cryin'. The prettiest girl in the notions, she was; and I—I been so scared for her, Joe. Why did you keep us waitin' and waitin'?"

"Me and the little girl was slow in getting here, maw; but we—we're here for good now—ain't we, little lady? Little lady with the hair just like maw's!"

"She gets it from me, Joe. Her papa used to say her hair was like the conner trim—

used to say her hair was like the copper trim-mings of his machines. Such machines he kept, Joe! His boss told me hisself they were just like looking-glasses. Essie, come

were last interconfig-glasses. Esse, come closer, darlin'.

"You won't forget the lamp mat, will you, darlin'—the lamp mat?"

"Oh no, maw. Oh, maw, you ain't mad at me? Please—please! Honest, maw, your little Essie didn't know!"

"Maw knows we didn't know, little lady. She ain't mad at us. She's glad that every-thing's going to be all right now; and you and her and Jimmie and me are

"Oh, my children!" the sick woman murmured. She smiled and slipped her fingers between her daughter's face and

the coverlet.
"Look up, Essie! I feel so light! I see
so light! It's like it says on the lamp mat-

just like it says, Essie."
"Maw! Maw darlin', open your eyes!"
"Maw!"

"Here, Jimmie, lend a hand! Lenne hold her up—so! No; don't give her any more of that black stuff, Jimmie, old man. Wait till the doctor comes. Let he is quiet on my arm—just like that; and hard me that ammonia bottle there, Essie, Elea sweet little lady. See there! She's coring round all right. Who says she sin't
coming to? Now, maw—now!"
"Joe, don't leggo me!"

"Sure I won't, maw dearie."

She warmed to life slightly and the tears seeped through her closed eyes and she let of his supporting arm down the length of his

"Joe! Essie, that you?"
"Maw darlin', we're all here."

"Don't cry, little lady. See, she's con-ing out of it all right. Here, gimme a lift, Jimmie. See there! She's got her breath

all right again."
They laid her back on the pillow and she

folded her hands lightly, ever so lightly, like lilies, one over the other. "Children! Children, I'm ready." "Ready for what, maw? Some mere black medicine?"

"Just ready, Jimmie, my boy! Here, Joe; hold my hand. It's like his was

children—big and strong."

"Aw, maw! Come on! Perk up!"

"I am, Jimmie, my boy."

"Perk up for sure, I mean. Gee, sin! there enough to perk about? Look at Jos and Ess—enough to give a fellow the Williss, pipin' at each other like sugar'd melt in their mouths!"

"My Jimmie's a great one for tessin' his

"My Jimmie's a great one for teasin his

sister, Joe."
"And look at me, maw-ain't I going to take my dynamo over to the Institute? And ain't the whole bunch of us right here not to your bed? And just look, maw-look at the two of 'em turnin' to sugar right this minute from lovin' each other! Ain'til the limit? Look at us, maw-all here and fine as silkworms!"

"Yes, yes, Jimmie; that's why I feel so light. I never felt so light before. It's like it says on the lamp mat, Jimmie—just like

it says. I'm ready for sure, my darlin's.

"Oh, maw—ready for what? Look at
us, maw dearie—all three of us standing
here—ready for what, dearie?"

"You tell 'em, Joe; you—you're big and
strong."

strong."
"I-I don't know, maw. I don't think I know for sure, dearie.

"Ready for what, maw? Tell us, darlin." She turned her face toward them, a smile printed on her lips.
"Just ready, children!"

### Sense and Nonsense

#### Choosing a Head

IN THE early days printers in most news-paper offices supplied the headlines for the items they put in type. Henry Cary tells a story of a man in a Milwaukee composing room who had a paragraph he did not understand.

He went over to the foreman and showed him the item.

"How'll I head this?" he asked.
"Oh," said the foreman, "head it appropriately. Don't bother me with such questions."

So the next morning the item appeared in the paper headed: Appropriately!

#### The Goat

A NEGRO order in Georgia borrowed the name and insignia of a popular white lodge without asking permission. The white fraternity promptly went into court with a restraining order. The issue was carried on appeal to the highest court of the state, where the attorney for the plaintiffs appeared to ask that the injunction be made permanent. He was addressing the

full bench.

"Why, if your honors please," he stated excitedly, "these negroes got our pass words, our hailing signs, our secret work, our badges, our emblems."

The chief justice leaned forward with a smile upon his face.

"It would appear," he said, "that the also got your goat.

#### The Intelligent Newcomer

WE ARE credibly informed that Eng-lishmen are the greatest colonizers if the world, the greatest sportsmen in the world, and the greatest outdoor people in the world. Sometimes, out in the news parts of Canada, people are willing to are that. A Western bishop hired a new-con Englishman to cook, as he was the only on in the party who could not cook, and mationed him to be sure to wash the mean before cooking it. He did—with soap

It was an Englishman not yet across to water who wrote to find out about if proper outfit for Canada, and who inquire whether moccasins or snowshoes were garded as the warmer for footwear.

It was an Englishman, on the Athabasa River, who bored a hole in a floating see to let the water out. And yet another Englishman, when asked to set a water mark at night to determine whether or no the river was rising, carefully made a mark # the water line on the side of a floating but-

On the whole, there seems to be a gree difference between colonizers and colonizers

#### BANTRY

(Concluded from Page 11)

Though the band was still playing in the distance, the loading of the service tents, side shows and cages had already begun. Before long the elephants arrived, and sure enough, as Stub had foretold, the big bulls refused to enter the new cars. Prods, com-mands, curses, tail-twisting were all in vain; the big brutes, squatting and waving their trunks, only squealed the louder, until finally lions, tigers, cockatoos and monkeys joined in the pandemonium, and Foster's hair fairly rose.

Then out came the blocks and tackle. A team of horses was attached to one end of the rope; the other end was tied about an elephant's neck, and he was dragged up the incline like a bale of rags. This was exciting enough at first; but when the rope failed to break and none of the animals threw himself off the incline, Foster turned his attention to the cows and calves.

These were drawn up in line like soldiers, some distance off, where they stood as mo-tionless as statues, apparently asleep and quite content, even in the absence of a keeper, to let their husbands and fathers settle the row they had kicked up. Imme-diately in front of them was an old mill race and along the edge of this race ran a footpath.

and along the edge of this race ran a footpath.

Now Foster, noting the absence of a keeper and still tasting his conquest of Maharajah, decided to walk down this path, which he did, passing within three feet of the big triangular heads and within easy reach, of course, of the trunks. He kept repeating: "No elephunt will hurt me! No elephunt will hurt me!" Nor did it. The goose flesh popped out on his body, but nothing happened except, as he walked along, one wicked little eye after another slowly opened and slanted a gleam at him and slowly closed again.

and slowly closed again.

The last animal in the line was a corrugated old cow named Bantry. Foster had learned her name that morning, and now recognized her from a tattooed crescent on ber left ear, which, according to Mukunda Das, was an insignia of Mohammedan royal rank. Mukunda had declared that Bantry knew more than most men, having had a century and a half in which to gather wisdom. She had been bought at an enormous price by the rajah of Mukunda's home province from a Sumatran sultan, and sold again by the rajah to Sellspaugh Brothers. The sultan had asked the enormous price, not only because of Bantry's intelligence, but also because of her remarkable attach ment to his little son, who had died at the age of ten. And Mukunda had added a sentence which thrilled Foster through and through: "Little sahib looks much like sultan's little boy."

Now the mahout in addressing Bantry always used a word which sounded to Foster like "Bizzilla," and it never failed to catch Bantry's attention. It was a fascinating word as it came hissing from the swarthy man's lips. Foster had practiced it off and on all day until he had almost reached Mukunda's sibilant perfection; and at this instant, standing about five feet from Bantry, he was seized with an irresistible desire to try his pronunciation out

on her.

He glanced up the path. No one was coming. All the mahouts were still wres-

tling with the bulls.
"Bizzilla, Bantry!" said he quickly,
fairly whistling his z's.
His heart leaped as Bantry opened her eyes. But she, seeing only a boy and imagining, perhaps, that she had dreamed the words, sighed deeply and closed her

eyes again.
"Bizzilla, Bantry!" he repeated louder.
This time the effect was startling. Bantry coiled her trunk underneath her mouth and advanced a step. Foster fell back three steps. She advanced three. More than this, every elephant in the line followed suit, executing a left-oblique as precisely as a rank of soldiers.

Dismayed but not frightened, and fearing only the circus man's wrath, Foster turned and walked rapidly away, expecting to close the incident. To bis astonishment the elephants followed. Still cool, for he had no doubt of his ability to outfoot the clumsy beasts, if it came to that, he swung into a trot. Bantry did likewise. He let out a notch, but at the next street Bantry was padding along close behind him, and behind her was a line of ghostly forms, whose huge, columnar legs swung with incredible silence and swiftness.

Terror now winged his feet. He ran as he had never run before, not even on that mem-orable Halloween night when he had thrown a pumpkin against Crazy Sackett's door, and Crazy Sackett had suddenly risen up from behind a lilac bush with a bludgeon in his hand; or when Brockley's bull chased him across a pasture lot. Yet the steady pluff-pluff of Bantry's feet, like some one thumping a leather cushion with a feather duster, diminished not one whit in his straining ears.

He turned the corner, thinking his un-wieldy pursuers might skid across the street and come to grief against a row of shade trees. But they one and all, down to the baby elephant in the extreme rear, made a beautiful turn; and it was now evident to him that Bantry, overlooking his resem-blance to the sultan's son, was bent on his

destruction.

The first refuge that occurred to him was home. But the awful image of those ten mountains of flesh being hurled against the parsonage, a frame building at that, quickly changed his mind. The same consideration deterred him from seeking safety in any other building, for he hadn't a doubt that the elephants would plow like a cyclone through even the First National Bank, which was built of stone and iron.

By this time he was flying down Main Street. It had never seemed so wide or so long. Lincoln's statue in front of the courthouse looked a mile away, though only two blocks. A man the size of that statue, it flashed over him, could save him. But no man of any size was in sight, nor had be seen one since the beginning of his desperate

In the middle of the next block, however, he spied Hank Lovejoy, the night watch-man, whom he recognized by his lantern. He knew that Hank carried a revolver, a huge one with a barrel like a gas-pipe, which, aimed at Bantry's forehead, would certainly close her mad career. Indeed, he remem-

bered gratefully of hearing Hank speak of his weapon as an "elephant gun." Breath was at too high a premium for him to call out for help, but he swerved toward the sidewalk, relying upon Hank perceive the necessities of his case. Hank, though a round-shouldered man, straightened like a ramrod, letting his lan-tern fall with a crash. But, alas! instead of drawing his elephant gun, he suddenly stooped, lifted a grating in the sidewalk and dove into the cellar beneath. Foster darted into an alley. It was nar-

row and paved with cobblestones, which were usually damp and slippery—a good thing for an elephant to break a leg on. And if Bantry went down she would blockade the passage against the others. But she did not go down; so halfway through the block Foster wheeled into an intersecting alley, confident that this sharp turn, flanked with the corners of brick buildings, would prove the undoing of his foe.

But no crash of bricks, no thud of tons But no crash of bricks, no thud of tens of flesh, followed; nothing but the dreadful, regular pluff-pluff of all those pairs of cushioned feet, which he expected to hear until the day of his death. That, he feared, was not far off, either, for his heart was pounding fearfully and his lungs felt on fire.

Then in a flash the way of deliverance was made plain, which was to return to the yards and throw himself upon the mercy of the only men who could choke off the ele-

the only men who could choke off the ele-phants. They would probably thrash him, to be sure, but their wrath was preferable to Bantry's.

He turned into Main Street again. His speed was falling off, and every moment he expected Bantry's snaky trunk to encircle his waist with an accompaniment of breaking bones. But he reached the willows again, and with renewed hope mustered all

his strength for a final spurt.

Then he stubbed his toe upon a root and fell! The end seemed at hand. But Ban-try, squatting like a dog and throwing a shower of dirt as she plowed along on widespread, stiffened legs, came to a stop with her great body looming above him like a balloon, and instead of trampling him to death, she reached between her forelegs with her trunk, picked him up and gently set him on his feet. Then she and all the others backed into line again, just as Foster

had found them. The next moment Mukunda Das dropped out of a near-by tree, chattering like a monkey. Foster, suspecting that he was swearing in Bengalese, made ready for a second flight. But the mahout flung him-self upon the ground and kissed the boy's bare feet, murmuring: "Little sahib! Little prince!"
"No elephunt will hurt me," said Foster,

simply because he was too astonished to think of anything else. He reached his room undetected; but

of course such an amazing adventure could not be kept, even at the risk of punishment, and so he told his mother the next morning. She grew fairly pale and kissed him. "What did Mukunda mean?" he asked.

She explained the doctrine of the trans-migration of souls, and said: "I suppose he thought the soul of the sultan's son had been reincarnated in you."

"Well, how do you know it ain't?" he demanded suddenly.

She started. "Why—I—I—it isn't according to our religion."

"But how do you know his religion ain't as good as ours?"

She let his "ain'ts" go unrebuked for once. "My dear," said she, drawing him closer and smoothing his bronzy hair, "those are questions which even the wisest can't answer. Now we'll go and make a clean breast to father. I fear he will punish you."
"I don't care if he does," declared Foster boldly. "It was worth a whipping. And,

mother, no man can ever make me cry again when those elephunts couldn't."

#### Daylight After Dark

DAYLIGHT eyeglasses are now being perfected to enable the wearer to see the are reflected to enable the wearer to see the same color values by gas or electric light as those given by daylight. With such glasses an artist could continue painting after dusk, using artificial light entirely. Color match-ing is very unsatisfactory under artificial light, as every woman knows; but complete success in the development of these glasses will mean that stores will have such glasses for customers to wear when it is necessary to judge colors by gas or electric lamps.

From the cigar sorter to the diamond nerchant, daylight color values are essential to a great many occupations. Scores of devices to obtain artificial daylight have been invented, many with much success, because there is a real demand in business for daylight. Almost all are designed to produce an artificial light as near like daylight as possible, and then make the light more perfect by putting screens in front of the lamps to absorb from the light the color values not found in daylight.

So much light is absorbed by the screens, however, that the lighting value is reduced; consequently such artificial daylight outfits are usually inclosed in a cabinet or have only a limited amount of light-just enough for matching colors—and are not used for lighting a store, for instance. Recently some lighting equipments used in stores have been brought fairly close to daylight, but they hardly solve fully the colormatching problem.

The purpose of the daylight glasses is to permit the use of ordinary gas or electric lighting and still give an opportunity for color matching. Instead of carrying pieces of goods to a window, the woman customer need only slip on the glasses to judge the colors. The method by which the glasses do the work is the same as that of the artificial daylight cabinets. The glasses have color screens to absorb the light rays that

are not found in daylight.

The fact that the screens are between the colors and the eyes, instead of between the light source and the colors, does not make much difference. It is only necessary in both instances to have the light source include the light rays that make color visi-ble in daylight. Mercury-vapor lamps are deficient in red rays, causing the green complexion effects that are so noticeable; so, with these glasses, it would not be possible to do the color matching under a mercury-vapor lamp.

These glasses have been developed in the research laboratories of an American the research laboratories of an American lighting company. The examples they have produced use gelatin films to absorb surplus rays; but the effort has been made to manufacture glass that shall have the right absorbing qualities. These efforts have recently been announced to be successful; so, before long, artificial daylight glasses will probably be marketed.

First nail top center to hold in place.

Always nail to interme-diate studding, before nailing edges. Use fine wire brads.

Nail edges with flat-head nails, three inches spart.

Paint before the strips are put over edges of panels.

#### Well Built Walls and Ceilings

Sometime you expect to build or remodel. Then you ought to know about BEAVER BOARD and its 41 advantages over lath and plaster for buildings of every kind.

BEAVER BOARD is a purewood-fibre product-light, strong, clean and wholesome.

It isn't a mere covering for wallsit's the whole wall, except the timbers to which it is nailed,

BEAVER BOARD is quickly put up, winter or summer. It resists the passage of heat, cold, sound, and suits new and remodeled buildings of every kind.

Visitors to Buffalo and Niagara Falls are cordially invited to visit our Buffalo offices and get a first-hand acquaintance with BEAVER BOARD quality, beauty and cooperative service.

BEAVER BOARD is sold by 8000 builders' supply, lumber and hardware dealers, in sizes to meet all your needs.

Write for free booklet "BEAVER BOARD and Its Uses," and painted sample. Also for details of the free service of our Department of Design and Decoration and our Builders' Service Department.

Hills

Heavy Roads

Boulevards

#### Every-day tests of your lubrication. Try them on nearby roads.

How soon does incorrect lubrication show up?

Often in one short run.

Consider three types of roads:

Hills. You come to a sharp grade. With one lubricant you must drop to a lower speed. With another lubricant you can climb the hill easily.

Why?

Because the first lubricant is wrong in body. Compression and explosion escape past the piston rings. Power is wasted. If the oil is low in quality, you must also overcome excessive friction.

Only oil correct in body and quality will give you full power for the hills.

Heavy Roads. The conditions are very similar to those in hill climbing.

Sand, mud or "rough going" brings heavy strains to the motor.

Where an oil correct in body and quality carries the car along easily, an incorrect oil brings power-waste and excessive friction-drag. Overheating is apt to follow.

Boulevards. Along level roads loss of power is not so often noticed.

But, even on the smoothest roads, only the correct grade of oil will give you full power and full mileage from your gasoline.

To compare the efficiency of any oil with that of Gargoyle Mobiloil, make this test:

Test. Select a steep hill. See how far you can go up on high gear with the former oil. Then clean out your motor with kerosene. Fill your oiling system with the correct grade of Gargoyle Mobiloils. Be sure that operating conditions in both cases are identical. Use the same test. See how much farther you go up the hill.

Use the oil specified for your car in our Lubricating Chart, printed in part on the right. A copy of our complete Chart will be sent any motorist on request.

On request we will also mail a pamphlet on the Construction, Operation and Lubri-cation of Automobile Engines. It describes in detail the common engine troubles and gives their causes and remedies

It is safest to buy Gargovle Mobiloils in original barrels, half-barrels and sealed five and one gallon cans. See that the red Gargoyle, our mark of manufacture, is on the container.

The various grades of Gargoyle Mobiloils, purified to remove free carbon, are:

Gargoyle Mobiled "A"
Garzoyle Mobiled "B"
Gargoyle Mobiled "E"
Gargoyle Mobiled "Arctic"

They can be secured from reliable garages, automo hile supply houses, hardware stores, and others who supply lubricants. For information, kindly address any inquiry to our marcet office. The city address will be sufficient.

#### Correct Lubrication

#### The Fakers

(Continued from Page 21)

deportment and who would stay as long as they possibly could. Every fashionable woman she chanced to meet gave Mrs. Lester added capital for her future enterprises, for she was extraordinarily skillful in weaving into her conversation, in a most impressive manner, accounts of her intimacies

and of her previous entertaining.

Harassed by a small income she was a marvel at getting the worth of her money. She knew where the best could be obtained for the least price. Her clothes were always in the latest mode, but the few close women friends she had were at a loss to understand how she did it. Her secret was her own skill at dressmaking and her vast adaptability to the mode of the moment. She never threw anything away. Every gown she had was in her possession for years. She had one trunk that was filled with old waists, old skirts, pieces of lace and all the ephemera of woman's attire. From these, with a little new added material, she could supervise her sewing-woman's efforts until she was gowned to the minute and for every occasion.

Her economies in dress, in lingerie, in all her adornments were the marvel of those few who knew of her private affairs; and only a few knew, for she maintained her pose of wealth and social standing and adequate resources even to her most intimate

Her hats were the envy of her acquaint-ances. She was a milliner as well as a dressmaker, and she could browbeat the haughty proprietor of a fashionable hatshop into taking her materials and using them with a latest Paris model hat body until she ap-peared in a creation that cost her little and looked as if it were direct from France. Both in Europe and in this country she had made a study of the shops. She knew the best place and the cheapest to get gloves. shoes, stockings, even down to hatpins and hairpins. She had cheap, but effective, seamstresses and milliners in every capital in Europe and in New York. So, too, with every article of attire. Always she was per-fectly appointed, even to the latest mode in

She never by any chance wore real jewelry, except a diamond ring or two, but her imitation pearls and her imitation ornaments of every kind were of the very best and were bargained for and secured at the

lowest outlay.

She wore plumes on her hats when plumes were the fashion, that looked as if they were just imported, though they had been in her millinery reserve stock for years. She could make over a fancy waist half a dozen times, and each time it seemed to have come fresh from a Fifth Avenue shop. She bought one or two new gowns each year and perhaps one new hat, and each invest-ment was the subject of worry and trouble for the tailor or dressmaker or the milliner for days, for she knew what she wanted, made every penny of her money count, and had a manner that was irresistible of bluffing the tradespeople into her way of think-ing and into carrying out her desires. She had had gowns and hats from famous Paris houses, and she had carefully preserved the name labels from these and sewed them time and again into her American-made clothes. She never had a gown or hat by any chance that did not have a Paris label

She was tall, slender, with an excellent figure and masses of black hair. Her teeth were even and good and her hair of sufficient quantity to obviate the necessity for artificial amplification, even at the time when puffs were in style. Her complexion was pale but clear, and her skill with rouge amounted to wizardry. Her only object in life, aside from being entertained so that she would not be obliged to spend money for board, was to enhance her at-tractiveness in order that she might gain greater admiration. She was entirely selfcentered, and cared nothing for men except as she might use them.

She had the air of one born to the pur-ple and disdained any but the most select society. She was affected in her conversa-tion, her gestures, her poses and her walk. She had a smattering of many accomplishments, but was accomplished in none, and was clever enough to make everybody believe she was accomplished in all. She faked her familiarity with the foreign languages, her knowledge of art, music, books and fashionable sport and society. She read

book reviews so she might talk intelli-gently of books to bookish people, but she never read a book or a poem through. No subject of ordinary conversation but was familiar to her, to hear her tell it, and she even went so far as to dip into politics a bit in order to make herself agreeable to men. She knew the patter of baseball and golf and polo and hunting, and, when away from the ball park or the links or the hunting field, was expert in each. She could dance wonderfully well, and took up each of the latest dancing graves as it came of the latest dancing crazes as it came

along.

She had made herself a family crest, she had made herself a family crest, and parts of half a She had made herself a family crest, skillfully combining the good parts of half a dozen crests she had copied from books on heraldry in a public library, and insisted on putting "de Mountfort" into her name after she was married, and, after her first visit to Paris, had changed the commosplace "Alice" to "Alys," which, as she told everybody, was pronounced "Alleece." When she played cards she talked constantly of her European triumphs and commented on each hand with snatches of French or Italian or German. She had French or Italian or German. She had visited in Russia, having been invited to St. Petersburg by a woman she met in Paris, and on special occasions she used a

little Russian—all she knew, but more that anybody else knew. She regarded her husband as a harmless adjunct to her enterprises, and was deco-rously sorry when he died, taking coa-solation in the thought that she would look extremely well in mourning. She draped herself in black, but it was black fashioned into the most modish creations, and her affectation of public woe was so well done as to stamp her as an actress of extraor-dinary ability. At first she put on the deep-est black, unrelieved in any particular, and used a pencil to accentuate the circles about her eyes and a powder to increase the pallor ner eyes and a powder to increase the pallor of her cheeks, in order to give the impression of deep, pathetic and hopeless grid. Presently, however, her mourning began to take on various little worldly quirks, and was lightened here and there with white and lavender to relieve it. However, she was of the complexion and hair and eyes to look particularly well in black, and being economical perforce concluded to make conomical perforce concluded to make black the basis of her robing, inasmuch as when a woman gets her clothes organized for black or any other predominating color it is much cheaper to continue reasonably along those color lines.

Mrs. Lester knew, too, that there is something alluring in fashionable weeds worn by a widow when the widow is over her first grief and is observing things—and men—out of the corners of her eyes. In explanation of her continued use of black she frequently and pathetically told people that: "Black is such a protection to a woman alone in the world." She was a calm, collected and exceedingly attractive

Her husband left her twenty thousand dollars life insurance. She threw herself on his friends and demanded that they invest this for her or tell her how to get enough income from it; and they came to her rescue and doubled the sum for her in one way or another. Her capital was carefully put into good dividend-paying stocks and gilt-edged bonds, and in the process she learned superficially enough financial phrases to enable her to talk understand-ingly of finance to amateurs, which the people she met usually were. She had an income of about twenty-five hundred dollars

After the death of her husband she had returned to Washington, because she con-sidered Washington an admirable base for her operations, which were to consist of living as comfortably and fashionably as possible, by the aid of her friends and her talent for visiting, with as little expendture of her own money as she could man age. She went to Mrs. Lake's boarding house because that was a high-class place of its kind, much better for her purposes than one of the smaller hotels, which were the only hotels within reach of her purse. She had it in mind to make another marriage some time, a marriage that would provide her with money to a reasonable degree, and with the position necessary to enable her to take the place she coveted in official society. To this end she assayed every eligible man she met coldly and shrewdly, considering all men who were

unattached as prospects and investigating them with her two standards in mindmoney and position.

HICKS was much disappointed because Mrs. Lester did not come down to breakfast next morning, and hurried back that evening to meet her. Soon after six o'clock she made another effective descent

of the staircase in another effective gown.
"I should think," sniffed a straight-upand-down wife of a representative, "that
she would get tired of those theatrical entrances and exits of hers, but apparently

the never does, even if we do."

"My dear Mrs. Perkins," protested the stonished Hicks, "how can you talk like hat? She is the most natural and unaf-

ected woman I ever met.

"Then," commented Mrs. Perkins bitngly, "you haven't met many women. I uppose it impresses you because you are oung and fresh from the West, but I for ne am tired of her continual pose. Peraps, though"—and she concentrated a aleful gaze on Hicks—"she is putting on xtra frills for your benefit. She has been a ridow long enough now, I fancy."

Hicks affected greatindignation, although he thought made him glow within. "Preosterous!" he exclaimed. "Her grief is nore. I am sure, and she has no idea of

ncere, I am sure, and she has no idea of

nything of the kind."
"Have you?" asked Mrs. Perkins, look-

"Not in the least," he hastened to assure at. "I am simply attracted by her culture in charm."

id charm."
"Well, then, take the advice of another about her oman who knows something about her x, and do not be deluded too much by that

dture or that charm."
"Why, the idea!" protested Hicks
mely; but that was the only retort he
uld think of at the moment. His mind d his eyes were on Mrs. Lester.

He discoursed at length to Mrs. Lester at night, and asked her whether she uldn't like to go to the theater with him. "I'm sorry," she said sweetly, "but I am Il in mourning, you know, and never go t publicly. Indeed, I remain in my room at of the time, only occasionally visiting most intimate friends here." Thereon she proceeded to tell Hicks, in what med a most casual manner, that those med a most casual manner, that those mds were the real leaders of Washington icty and persons of influence and disction.

'It wouldn't hurt any to go to the thea-would it?" urged Hicks, thinking he th have her to himself for a few hours sy from the others in the boarding house. Oh, la la, I suppose not; but don't you nk it would be much cozier to stay here i chat than to go to a stuffy theater and a mediocre play? Our American stage a memocre play? Our American stage to much inferior to the English stage, it you think? And as for the stage in is—ah, the stage in Paris!" She made ther gesture and lifted her eyes ecatatly. "There is no comparison. Such the interpretation of the emotions! I re the stage of Paris."

I shouldn't want a lady I know to see t of the French plays I've heard about,"

Hicks virtuously.

he laughed a tinkling laugh. "Oh,"
exclaimed, "you Puritans, you AmerPuritans! Why, you must not impute id motives to the French stage. It is exemplification of art, of life—the wit life of the dear French people." be asked Hicks if he had ever been to

Comédie Française, or to the Odéon, told of the gruesome plays of the Grand znol. Hicks, much abashed, confessed ad never been abroad, but hastened to he intended to make a tour soon, and d the first opening be had to change subject to himself. Hicks was thorly at home when talking about him-and was lavish with his commendation s talents, his future, discoursing elo-tly on the political honors that were tably in store for him.

shall win," he declaimed, "for the le are mighty and must prevail."

cs. Lester listened with a rather dis-tht air. Once or twice she yawned by. Hicks did not notice the yawns, cept along with his self-praise. ce when he stopped for breath Mrs.

r, assuming a most interested air, 1 was belied by a twinkle in her eyes, with a pretty seriousness: "Oh, Mr. 1, I love to hear you talk. You are so st, so sincere, and earnestness and ity are so rare in these days."

She sighed, as if this lack of earnestness and sincerity were an added personal woe.

Whereupon the fatuous Hicks plunged into another oration, which had his own earnestness and sincerity for a theme. "I think I may say," he began pompously,

Mrs. Lester had been looking for a chance to escape. This conceited young man was beginning to bore her. She saw Mrs. Lake, and excusing herself on the pretext that there was a matter she must talk over with her landlady, she wished him good-night.

She held out her hand impulsively, as it seemed to Hicks, and he grasped it and pressed it ever so little. She quickly with-

drew her hand and went to join Mrs. Lake. Hicks went out and took a walk, recall-ing her every word and look. Certainly she was the most attractive woman he had ever met, and a future spent in her company rose before his mind. He went to bed in a happy haze.

Mrs. Lester was not at dinner next day, and Hicks tried to learn why, but with no success. Mrs. Lake said she had gone out to dine. He ate his meal in moody silence and wandered about the parlors and hall, wondering where she was and bemoaning the sad fate that kept him from seeing her. Mrs. Perkins was sitting by the fire, and Hicks in desperation sat down beside her.

Mrs. Perkins had little use for Mrs. Les-She had repeatedly been snubbed by that lady when she had endeavored to make some discoveries about Mrs. Lester's per-sonal affairs. Hicks ventured a few com-monplaces. Mrs. Perkins, knowing what was on his mind, waited for her opening. It came when Hicks, in what he deemed was a most unconcerned manner, said: didn't see Mrs. Lester at dinner to-night."

Mrs. Perkins' eyes gleamed malevo-lently. "No," she replied, "I suppose she

was out dining with some of her high so-ciety friends, leaders of the exclusive set."
"She has many friends among the most influential people, she tells me," observed

"That's what she tells everybody," snapped Mrs. Perkins; "but you mustn't believe all you hear, especially when a widow who is trying to keep up appear-ances is doing the telling."

Hicks paid little attention to what Mrs. Perkins said. He was thinking of Mrs. Lester. After a moment's silence he asked:
"How old do you suppose she is?"

"That is a matter of conjecture," Mrs. Perkins answered. "Judging from the amount of European traveling she has done, and the length of time she has lived in the castles of the nobility, she must be seventy. Looking at her under the shaded lights of this room she seems about thirty. If you could get a glimpse of her in the morning before she is rigged up she might seem older than that. She says she is twenty-six

and was married when she was seventeen."
"I should say," ventured Hicks, "that twenty-six or twenty-seven is about right."
Mrs. Perkins changed her attitude. "Sonny," she said not unkindly, "you'd better run right back home. You may do something foolish if you stay here."
She rose and left Hicks staring into the fire. He acknowledged to himself that he

fire. He acknowledged to himself that he was strongly swayed by Mrs. Lester, and hoped she liked him; but up to this time it had not been brought home to him that he might, under the influence of his stirred emotions, go farther than he expected to. He had no intention of getting married, even if so remote a contingency arose as Mrs. Lester's consent to marry him, which had not occurred to him concretely, albeit there had been vague notions on the subject in his mind. He was entirely interested in the career he intended to make for himself, and he pondered the things Mrs. Perkins had said.

Hicks was not a woman's man. He was engrossed with himself and his ambitions, and up to this time had not been impressed particularly with any woman, although some women had appealed to him because of their beauty and attractiveness.

"Pshaw!" he said as he rose to go to his room; "what's the use of my getting excited about this woman? It'll be ten years before I want to get married, and probably I'll never see her again after I go home.'

But he couldn't dismiss her from his mind, and the fetching pictures she had

presented were engraved on his memory.

On the advice of Senator Paxton, Hicks devoted much of his time to making himself known to the Democratic leaders in the Senate and House. He called on all the big

## This Man Keeps the Gasolene and "Velvet" in Oil

S. F. Bowser, the active head of the great S. F. Bowser concern of Fort Wayne, gave the world the first self-measuring oil pump. Today this concern makes over five hundred different oil handling devices that solve the problem of oil storage, safety, utility, economy.

These range from efficiency equipment for the small private garage, to Bowser Systems for the country's largest or smallest Factories and Power Plants.

See the following application of Bowser equipment. Consider the saving in money-in time-in space-in oil-the saving of life and limb-all the results of this great Bowser idea that has so revolutionized the handling of oils of all kinds. Do you come within one of these classifications?

> Public, Private and Commercial Garages, Foundries, Power Plants, Printing Establishments, Stores, Paint and Oil Trades, Factories, Railroads, Dry Cleaners Establishments, etc., etc.

### Safe Oil Storage Systems

### In Garages

In the garage a Bowser Outfit keeps the gasolene out of the danger zone. Keeps it full-powered. Climatic changes can't reach it underground. Its temperature is about constant. Can't vaporize or weaken. The gas is pumped and piped any distance to the garage-right into the machine-clean full-

And the cost is small. All sizes. Easily and economically installed. A Bowser System saves its own cost in oil, efficiency, convenience. Also portable units for the Public Garage—both gasolene and lubricating oils. Various sizes. Each a money saver,

Garage Equipment

#### In Stores In Factories

From simple Departmental units to Individual and Centralized Oil Filtering and Circulating Systems. Save the oil. Save men's time. Save the machinery. Save your space—your money. Measure oil. Keep it clean. Make every man automatically careful and responsible. Bowser Systems keep gasolene, kero-sene, paint oils, varnishes, etc., "out of sight" yet always handy. No oil con-taminated merchandise. No leaving the store to lug it oil. No lost profits through lost oil. No fire hazard, Just conven-ience comfort safety. Executives from ience, comfort, safety. Everything from the small Bowser equipment for the little corner store to the big departmental.

#### The Bowser System For You

Whether you have a garage, a store or a factory there is just the Bowser oil-and-moneysaving equipment for you. Learn about it-of the added efficiency—the reduced oil expense. The way to learn about it is simply to mark and mail the attached coupon. No cost. No obligation. If you have an oil problem, Bowser has undoubtedly already solved it. Thirty years "Oil problem" experience is yours for the asking. Send the coupon today.

General Acoustic Company, New York City 1329 Candler Building, Ne

men, and was twice invited to luncheon in the Senate restaurant by Democratic sen-ators to whom Senator Paxton had introduced him. He had met most of the big Democrats by the time he was ready to go Paxton congratulated him on his ability for making friends.

ability for making friends.

"You are getting on, Tommie," said the senator to him, when Hicks came in to say good-by. "Hostetter was talking to me about you the other day. He said you seem to be a most intelligent young Democrat, and well versed in the principles of the party. Grantley mentioned you too."

Hicks winced. He had been in the company of Senator Hostetter for an hour, and that garrulous statesman had talked continuously and ramblingly about his own scheme for currency reform, which he as-

scheme for currency reform, which he assured Hicks was a panacea, and the only one proposed, for the relief of the financial situation. Senator Grantley's conversation had consisted of three staccato inquiries of

Hicks:
"What did you say your name is? Hicks?
Ah, yes, and where do you live? Rextown?
Very good. How are Democratic prospects
out there?"

Hicks tried to answer, but the senator was busy with a bowl of crackers and milk and did not listen, and after a few spoonand did not listen, and after a tew spoonfuls had been hoisted into his capacious maw, looked up and asked exactly the same things over again, and without waiting for further reply dived into the crackers and milk once more. He did not hear a word Hicks said. Still, Hicks reflected, unless Senator Paxton was joking him, it was something to have these distinguished Democrats remember him at all.

remember him at all.
"I gained much inspiration from my
conversation with those statesmen," he observed.

served.

Senator Paxton looked at him keenly.

"Oh, did you?" be asked. "Well, there is where you have something on the rest of us, who achieve nothing but a sense of utter weariness when they talk. However, that is a good sign. You take it all seriously, or say you do, which amounts to the same thing; for if you keep on saying you do you will eventually. Remain in that serious frame of mind toward your politics. You cannot be a successful protagonist for the new freedom of the people unless you are continuously as intense and consecrated as new freedom of the people unless you are continuously as intense and consecrated as a hen that has been hereaved of her eggs and is sitting on a couple of doorknobs. Good-by and good luck to you. Keep me informed. I'm always at your service."

Mrs. Lester spent the week-end with some friends and Hicks delayed his departure for a day to see her again before he left. He had talked to her as frequently as she allowed him to and, though he held his

she allowed him to and, though he held his feelings in check, he was still under the spell of her many fascinations. He had in-quired of Mrs. Lake about her age, being uneasy because of the insinuations of Mrs. Perkins that she was not so young as she appeared, and Mrs. Lake had assured him Mrs. Lester was not a day over twenty-

On the night of her return from her week-end visit, Hicks, seated by her in the par-lor, told her he was leaving the following

day.

"Are you?" she asked, with an assumption of great interest. "Oh, I'm so sorry, Mr. Hicks. I have enjoyed your company very much."

Hicks blushed. "I am glad to have been an instrument for giving you even the slightest happiness," he declaimed.

She devoted herself to him for an hour, wroing him to recount his ambitions and

urging him to recount his ambitions and his prospects, said a few skillful things about herself, including the dropping of a hint or two of her financial standing, and, as she gave him her hand at ten o'clock, besought him in a most ingenuous manner not to dismiss her entirely from his mind when he was out in Rextown fighting the fight of the people.
"Forget you!" repeated Hicks with as

much sentiment in his voice as he deemed advisable. "Forget you? Why, Mrs. Lester, your memory shall remain with me always

and shall be my inspiration."

She smiled radiantly at him and ran up the stairs, turning when half way to the top to wave a pretty hand at him and say softly: "Auf wiederschen!"
"I suppose she is worth quite a lot of money." Hicks observed to Mrs. Lake at

breakfast next morning.
"I suppose so," Mrs. Lake replied in an
extremely non-committal manner.

Hicks took a train at noon. That afternoon Mrs. Lester, stopping in the hallway

to say a few words to Mrs. Lake, brought

up the subject of Hicks.
"Has Mr. Hicks gone?" she asked.

"Yes, he left at noon."

"A nice young man," she thought, as she went down the steps leading to the street.

"Perhaps he will do some of the things he says he will. I'll keep track of him."

HICKS stopped at Salestown to see his mother, and spent two boastful days smong his boyhood friends, telling them of his success in Rextown. He wrote an articleabout himself for the Beacon, which Editor Grandison promised to publish, and which caused Colonel Seth Howard to grow number in the face when he read it become purple in the face when he read it, because of the appreciative way in which Hicks re-ferred to himself as one of the leaders of the

Rextown bar and prominent in politics there. Hicks took stock of himself on the train for Rextown, after his mother had bade him for Rextown, after his mother had bade him a fond and tearful farewell. It would be two years in April since he first reached Rextown. He had made in fees for collec-tions and in various young-lawyer ways about two thousand dollars, and still had some of his original capital in the First National Bank. He had acquired many acquaintances and some friends. He had cetablished himself as a young man of conf established himself as a young man of good

established himself as a young man of good character, was regular in his attendance at church, and felt sure Rollins liked him.

With Gudger he had fought the Rollins-Barkiss case through a seemingly codies series of negotiations and had finally forced a compromise with Chittlings, because of Gudger's superior legal abilities, for ning thousand dollars. This sum Hicks had paid to Rollins, and for his services Rollins gave him four hundred dollars, in addition to his retainer of a hundred dollars. Otherwise Hicks had not advanced much in the law, but he never expected to do much at law, but he never expected to do much at

his profession.

Chittlings was friendly. Hicks found him
to be a man of considerable rough ability. He was noisy, even blatant, and he had none too many scruples, but he made friends and kept them. He was a good mixer, dabbled somewhat in politics, was always ready to buy a drink or a cigar, entertained a good deal at the Hotel Metropolis, be longed to the clubs, and was the Rextown type of a good fellow. He was a Republican. Hicks heard Chittlings had underground connections with Ross, the locations and with the corporations and the boss, and with the corporations, and that he helped "put over" things in the bear of aldermen that were wanted by the corporations. Chittlings apparently had a ambition for office. He was looking to money, and he had an income of five or six there and dollars a year, which was even thousand dollars a year, which was excel lent for a man in his position in Rextown a

that time.

"Hello, Hicks," said Chittlings one day when they met at the Hotel Metropolis "how's every little thing?"

"If you mean my health, I am well, Hicks answered. "If you mean my business, it is satisfactory."

"Haven't seen you in court much."

Tommie squirmed at this. "No," h replied, "I have been much taken wit outside matters. However, I have som important cases in preparation."

"Glad to hear it," said Chittlings hear ily. "Come and have a drink. Oh, I for got, you don't drink. Drop in and see a some day soon. I want to have a talk wit

some day soon. I want to have a talk wit

you. So long."
Two days later Hicks had nothing to d He had been his hand-shaking rounds, ha written every letter there was an excuse it writing, and he went down to Chittling

Chittlings was there. "Howdy, Hick, he shouted, after Tommie had sent in h card. "Sit down and make yourself at hom Still busy with those important cases,

reckon."
"Yes," Tommie replied, "they are on pying the most of my attention."

Chittlings lighted a cigar with unness sary care, Hicks thought, as he watched it operation. When the cigar was burns to his satisfaction, Chittlings turned in h chair, looked hard at Hicks and said: "Course, Hicks, I know you haven't a rate of any consequence in your office."

Hicks flushed. He clenched his fists 13 jumped to his feet.
"Do you mean to say I am a liar?"

asked excitedly.
"No, no," soothed Chittlings, "sit down and be calm. I don't mean to say you make the color of the color liar, but I do mean to say you are a blast

(Continued on Page 41)

#### (Continued from Page 38)

ad a pretty darn good one, too, if anybody sould ask you.

"I don't understand," protested Hicks.

"Oh, yes, you do; sit down and cut out to beroics. You know you haven't a case orth while in your office—I know you green't and you know I know it."

"But ——"

"But nothing! That's the fact. Now, sen, I've been watching you. Sit down; sere's nothing for you to get sore about. ve been watching you, and I have a propition to make to you."
"What sort of a proposition?"
"A proposition to come into my office."
"On what basis?"
"As a partner with a small interest."

As a partner with a small interest." "How much of an interest?"

"That's a matter for future considera-en. How does the main plot strike you?"
"I fail to see any advantage to myself in

"You do, do you? Well, listen to me d I'll put you wise as to several advanges. In the first place, you've got more ree than an insurance agent and you've t more self-confidence than a stocknown and gretting a good line of acquaint-

npany actor. You are moving round this vn and getting a good line of acquaintces, and you are playing an end of the me that isn't in my organization."

'What do you mean?"

'I mean you have tied up with the irch people and I have taken the other i of it; you have joined the Democrats i I am a Republican; you are a good-remment boy and I am in favor of bad remment if there is anything in it for; you are on the reform lay and I am h the gang; you are well calculated to h the gang; you are well calculated to oplement and supplement the activities J. K. Chittlings, which is myself, and I use you both to my own and to your antage.

It seems to me a one-sided affair," com-sted Hicks, who was listening intently, Not at all; not at all. You'll get your Not at all; not at all. You'll get your re. You are smart enough for that, n if I tried to do you. You are not much a lawyer, and you never will be. You en't a legal mind. You—"

Then why do you talk to me about king a law partnership with you?" exmed Hicks hotly. "I—"

Be calm, son, and let me explain. As I saying, you are not much of a lawyer.

saying, you are not much of a lawyer never will be. Now I ain't such a derful lawyer myself. But that doesn't ter any more with me than it does with . What I see in you is business-getting ity. I think with development you can good business-getter. You know how to e friends with people and keep friendly them, barring your conceit, for which ve you the palm over any youngster I met; and business is what this insti-

met; and business is what this instinn needs."
But," said Hicks, "if neither of us is a
rer, as you say," and he sneered in his
style, "what good will business be to
ven if I can get it?"
hittlings laughed uproariously.
My boy," he said, "there are many
gs you must learn, notwithstanding
firm idea you know it all. The sucof a law firm, from a financial standof a law firm, from a financial standt, doesn't depend on the amount of t knows. It depends on the amount of t knows. It depends on the amount of business it can get. I can hire lawyers he platoon. I can get a dozen right in town who know more law than you and er will know, and get them for small too. They know the law, but they n't the faculty for getting the business. can't cash in on their knowledge. I levelop you into a business-getter, and levelop you into a business-getter, and show you how to hire lawyers, hire by the week for wages. There was time, for example, when you hired ger. Do you get me?"

merely engaged Mr. Gudger because s busy with other affairs," Hicks pro-

ittlings laughed again. "Sure," he "but you hired him, didn't you, and lidn't fool Gudger and you didn't fool "Sure." he Still, in that transaction you showed tain nerve and a certain horse-sense made me look you over. Now, then, ou want to come in?" cks had been revolving the proposi-in his mind while Chittlings talked.

ould see advantages, but he didn't

ould see advantages, but he didn't ose to be eager.

'Il have to think about it," he replied.

th, all right; there's no hurry. Let me nt this angle to you, though: You are mocrat and I am a Republican. You church and I don't. You are taking

the people's end of it, or will when you know how, and I am for the money side. Now, then, if we join hands under my tute-lage you will develop into an asset in this business and we can play both ends against the middle and get the money. Had that occurred to you?" occurred to you?"
"I must consider what you say."

"No hurry. There's a good opening here. Chittlings & Hicks. Sounds pretty fair, eh,

Hicks thought seriously of the proposition made by Chittlings. His first and most forcible objection was that Chittlings intended to call the firm Chittlings & Hicks. He could not justify that. In his opinion, any coalition must be known as Hicks & Chittlings. Chittlings, not only because it was more euphonious, but because he was the Hicks concerned. If he could get round that he decided the arrangement might have advantages. Although it pained him to admit it to himself he knew his knowledge of the law was so slight as to be of no consequence in the straight-out practice of that profes-sion, and he realized the truth of Chittlings' claim that lawyers can be hired by the week. He felt confident he could get business, by aid of his various civic and church connections, as well as by his assiduous cultivation of men with business to bestow, and he decided it would be easier for this business to be carried through in a lawyerlike manner if Chittlings were there to look after that end of it.

Most of all he was interested in the hint by Chittlings that, one being a Democrat and the other a Republican, they could realize two ways. There was something about that that appealed to him strongly. He didn't bother to analyze his own view of such a proceeding, and it is doubtful if he could have analyzed it had he tried. Intrinsically the proposition appealed to Hicks, It suited his temperament. It fitted his quality of mind and conscience. It was on all fours with his habitual practice. He could see quick and easy returns. He knew Chittlings as a forceful fellow, who stood reasonably well in the community. More potent than all else, he figured that with Chittlings to guide him he could at-tain quicker and better results. So after mature deliberation he decided he would join Chittlings, provided, of course, the firm's name was Hicks & Chittlings. He must exact that tribute to his own impor-

He talked with Rollins about Chittlings,
"What sort of a chap is he?" he asked.
"All right, professionally and personally,
for all I know," Rollins told him. "But

he's a Republican."
"What difference does that make so far as his professional standing goes?" inquired

Hicks.

"None, I suppose," Rollins said; "not a bit, I reckon, with the general public. But I tell you, Hicks, there never was a Republican I would trust as far as I can throw a bull by the tail. There's something in that treasonable politics of theirs that makes me suspicious of the whole kit and caboodle of them."
Hicks laughed. "Oh, Mr. Rollins," he

said, "I fear you are putting it too strongly."
"Not a bit," protested Rollins. "Not a bit. I'm not holding up all Democrats as paragons of purity, you understand, but I'd take my chances with one in a business deal sooner than I would with one of those

traitorous Republicans."

Hicks said: "I am considering a proposition to go into partnership with Mr.

"You're what?" shouted Rollins.
"I say he has offered me a very favorable

business arrangement to join with him in

the associated practice of the law."

"But he's a Republican."

"Certainly he is, but I fail to see how a business association with him will affect my Democracy."
Rollins shook his head sadly, "You

can't touch pitch without being defiled, he said.

"Oh, Mr. Rollins, it isn't so bad as that," and Hicks talked for twenty minutes, showing how it would be a good thing for the Democrats to have him in close touch with a Republican who was in turn in touch with Republican affairs.
"Well," said Rollins finally, "maybe it's

all right, but I have my doubts,"
Hicks saw Chittlings several times and

they talked a little of the plan. "No hurry," said Chittlings. "Think it over carefully. It will be a good thing for you."

### If yours is a one man office or a 300-stenographer concern-

#### THE YALE & TOWNE MFG. CO.

Dear Sire:-

The seventy-five Dictaphones now used in handling our New York correspondence were in-stalled after fourteen years' experience with dictation machines. We early recognized the dicta-tion machine system as logical and inevitable as it eliminated the duplication of work—twice written letters—which shorthand necessitated.

In 1913 we investigated the relative merits of dictation machines from all angles, as we desired to standardize on one make. The order you re-

ceived for seventy-five Dictaphones was the result, Dictaphones in our offices have meant a large saving in the cost of our correspondence. If we should give up the use of the Dictaphone today, we would undoubtedly need a much larger number of stenographers.

In addition to this direct traceable saving, we feel that the convenience of the Dictaphone and the time and trouble it saves to those dictating correspondence, while difficult to estimate in dollars and cents, is of equal importance.

Your service has been uniformly prompt, courteous and efficient on the very few occasions we have had to call on you. In fact, your facil-ities for providing service constituted one of the reasons which led us to standardize on Yours very truly,

THE YALE & TOWNE MFG. CO.

### The New Regal is the Thoroughbred it Looks to Be

Has roomy comfort for five people; weighs less than 2400 pounds, fully equipped, with a motor that develops 39 h. p. on brake test

The design has European smartness. There is beauty in the whole car, and beauty in little things. For instance, you'll wonder at first how you put water into the radiator, and then you'll see how it cleans up the lines of the car to place the radiator-cap under the hood.

You'll like the absence of clutter on the sides, because the side lights have been eliminated. The front lights have been made immer, so they can be "turned down low" for city driving, or when the car is standing in the streets at night.

You have been waiting, perhaps, for a sensibly priced car that won't look overloaded. When you get a family of five into this new Regal, everybody looks comfortable—there's none of that crowded, jammed-together, afraidto-breathe appearance.

The rear seat is 48 inches wide, broad enough for three large persons wrapped up for a winter ride. The doors are almost two feet wide—23 inches.

There is no danger of torn garments in entering or leaving the car, even for stout people. In front, the driver can enter from either side with ease.

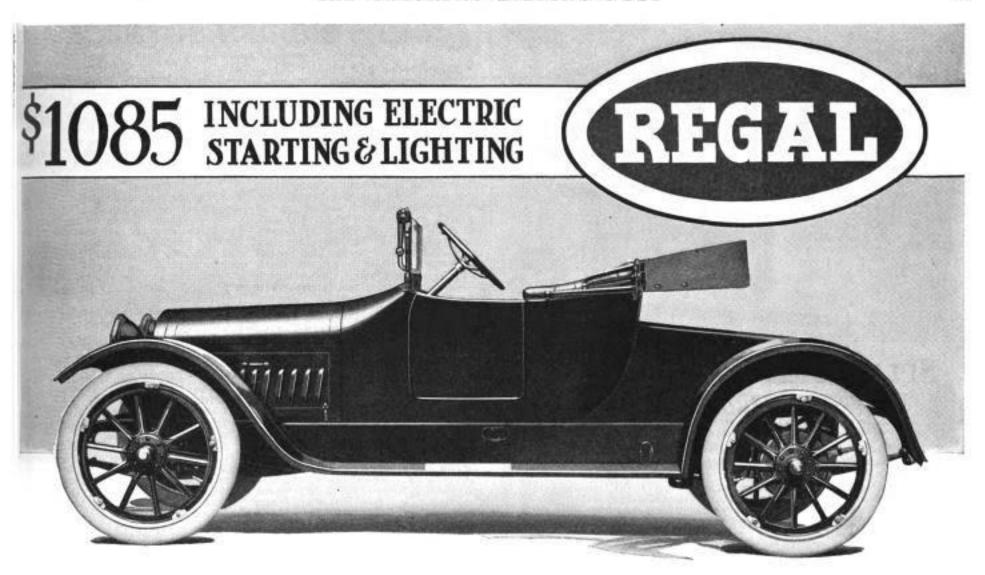

The front compartment has plenty of comfortable working room. A longlegged man can drive the Regal without getting his knees up like a bicycle rider. You sound the electric horn with a button in the middle of the steering wheel. One man in the rear seat of the Regal can put up the new-style top by himself, and he can adjust all the side curtains in a minute, without leaving the car.

The Regal Company has heretofore built both underslung and overhung types of cars. The new Regal is an overhung, and will be built in one chassis only two bodies—built by tens of thousands.

A lot of underslung advantages are retained in this new car. The road clearance is greater than that of many bigger overhung cars. But there's a special spring suspension that makes the center of gravity low.

This insures two things—exceptionally easy riding, and exceptional stability even under road conditions that might spell danger in an ordinary car.

The New Regal is from 300 to 500 ths. lighter than most cars around its price—because pressed steel and forgings have been used instead of castings wherever possible. This cuts down tire bills and gives the engine less dead load to carry.

# A \$3,000,000 Company with Seven Years of Known Success

Ten acres of factory space devoted to the manufacture of one chassis at one price. Quick service to owners assured by a world-wide dealer organization

It's a joy the way the Regal takes long, hard hills. The motor has developed 39 horsepower on actual brake test—a big engine, considering the reduced weight of the car. The whole motor head can be removed—letting you into the heart of all the cylinders for cleaning and adjustment.

The electric starter acts directly on the flywheel. It has no intermediate gears, therefore cannot clash or burr when operating. The Regal starter has from 40 to 60 less parts than any starting device which is not direct in its action. This means, of course, much less possibility of trouble.

The Regal starter is included in the price—\$1085—built right in and sold right along with the car.

Regal brake drums are 12 inches almost big enough for a car twice the size of the Regal. That's because when you need brakes you're apt to need them badly—you want them reliable, powerful, smooth, and quick.

Young fellows, doctors, business men, will warm up to the Regal Roadster. It is long and swoopy, and looks ready for rough roads, or ready to run alongside the best of them on the boulevard. There

is a lid on the whole back end. Raise it, and you will find space enough to carry more than the contents of an average trunk.

There is a \$3,000,000 company behind this new Regal car—a factory with ten acres of floor space and a capacity for 20,000 cars a year. And there's a factory personnel that's imbued with the ideal of right workmanship, from F. W. Haines, the President and Chief of Design, down to the youngest shop apprentice.

The man who buys a Regal car, if he ever has any trouble, will be able to replace a part without fuss or delay. The Regal service department will come through promptly and pleasantly—without charge when it's our fault; with a reasonable charge when it's not.

We will send you a book about the two Regals, touring car and roadster, if you write us a card. It will show intimate pictures of many interesting features of the new Regal—and there will be good reading for anybody who ever rode in an automobile.

These new Regal models are now on display throughout the country, and you owe it to your general store of automobile knowledge to go and examine them closely.

### What You Get

Direct Electric Starter Electric Lights, with "Dimmer" Electric Horn Simplified Electric Wiring Removable Motor Head Gasoline-Saver Valves Extra Size Brakes - 12 inches Hidden Radiator Cap Left-Side Drive Center Control 300 to 500 lbs. Less Weight 112-Inch Wheel Base Unusual Foreign Design 23-Inch Tonneau Doors 48-Inch Rear Seat Adjustable Wind Shield One-Man Top Inside Curtains

TO DEALERS: The Regal Company is bigger than ever, and we want new representatives in every town and county NOW. This advertisement is the first in a big advertising campaign, which will create a large demand for Regal cars this summer. We have prepared a big, illustrated circular which outlines our new sales plans and describes fully the two new \$1085 Regals—touring car and roadster. If you think you can sell Regal cars, write us, regardless of where you are. On page 8 of our circular is an article of special interest: "How YOU Can Sell the New Regal."

PRINCIPLE SERVICE SERV

# SIM'S SUDDEN SOTNESS

(Continued from Page 23)

"Behave!" whispered Lisbeth, smiling up at him. Very handsome and gallant Sim was looking. Rowena, dancing in the same set, thought so. His face glowing with animation, his brown eyes brimming with the spirit of mirth and his stalwart with the spirit of mirth and his staiwart figure set off admirably by store clothes that miraculously happened to fit him, he showed to unusual advantage. "Behave" was positively severe applied to such a cavalier. Yet Lisbeth might, unreproved, have said almost anything to anybody, looking as she did. Pink was the color of her freely tree pink and white. Her dark her frock, rose pink and white. Her dark hair was a triumph of fluffing and curling. Greatly daring, she had given her face and neck a touch of powder, and her full lips seemed of a richer crimson than usual. Then she wore her mother's cameo brooch in its red coral setting, and two rings, and altogether she was the prettiest thing im-aginable. Sim at the moment was clearly of that opinion.

He took her hand and pressed it, and she audaciously returned the pressure as they separated in the circling figure of the dance. Once and twice Sim touched hot, moist palms and clinging fingers, hardly conscious of the contact, and then a sort of electric thrill shot through him as he felt the quick, firm clasp of Rowena's hand.

He stooped to her ear as she passed.
"I hate to let loose of you," he whispered. And he meant it.

"Promenade all!" shouted Prothero, and Sim had his partner on his arm again. "To your seats!" He led Lisbeth, breathless "To your seats!" He led Lisbeth, breathless and blooming, to one of the chairs arranged along the wall and seated himself beside her. "You got over your mad at me, didn't you, Lisbeth?" he said tenderly. "Shucks!" answered Lisbeth with a languishing side glance. "I wasn't mad with you, Sim." "You wouldn't keer if I come over Sunday afternoon, would you?" asked Sim, nursuing his advantage.

pursuing his advantage. "I'd like for you to come," said Lisbeth.
"Your tie's slippin' down, Sim. Lemme fix
it for you." It's a turr'ble pretty tie."
Sim leaned forward and she drew the knot

of it tighter and spread the ends. "That's better," she approved, surveying the result

of it tighter and spread the ends. "That's better," she approved, surveying the result with her head on one side.
"Don't quit," begged Sim. "Mabbe you could do better yit."

A voice thick with hardly suppressed rage interrupted. "I reckon you'll have to get along the way it is," Ben Foster had come up and was scowling at them fero-

"Next dance is mine," pursued Foster, addressing Lisbeth. His little eyes rolled fiercely from one to the other, but Sim's attention had been distracted to the opposite side of the room where Rowena was

site side of the room where Rowena was seated, for the moment, alone.

"Take this yer chair," said Sim, and before Foster could realize his rival's obliging offer Sim was at Rowena's side.

"Well?" said Rowena with a queer little smile. "Enjoyin' yourse'??"

Sim made no immediate answer. His eyes were bright with admiration as he looked at her. What hair she had! Not fussed up, not a particle; but, Lordy, what a heap of it and what color there was in it! And the little freckles bunched at the bridge of her nose; and the blue glints in

bridge of her nose; and the blue glints in her eyes like the flashes from dewdrops in her eyes like the flashes from dewdrops in the morning sun; and the blackeyed Susans that were pinned at her breast; and the bronze slippers that peeped out from her skirts! Talk about your pictures! "Cat got your tongue?" "Yes, I'm enjoyin' of myse'f," replied Sim. "Particular well right now. "Tain't no wonder I hain't been able to got near you for the crowd. Rowena, I—I reckon you never took a look at yourse'f in the glass this evenin', so you don't know how I'm feelin' this minute." "No, I hain't no idea," said Rowena

I'm feein' this minute.

"No, I hain't no idea," said Rowena mischievously. "Did Ben Foster scare you away from Lisbeth? You'd better watch

out, Sim. Berkley Pendleton has got his eye on you now. Look!"

Sim looked. Pendleton, splendidly at-tired, was standing near the door, pulling his long mustaches and frowning balefully.

"A jim dandy vest he's wearin'," Sim commented indifferently. "Rowena, I've been thinkin' a heap of you since I seen you

"An' you've been thinkin' a heap of Lisbeth," mocked Rowena. "Don't blush,

Sim. I know you cain't he'p it no more'n I can he'p bein' red-haided. I don't like the way your necktie's fixed. Lemme tie it for you.

The evening was well along. Sim had danced three times with Rowena, three times with Lisbeth, and had just escorted Miss Hitty to a seat for which her late exertions in the Virginia Reel made her expecially grateful.

especially grateful.

"Oh me! Oh my!" panted Miss Hitty,
mopping her perspiring brow. "Sim, for
mercy's sake get me a drink of water."

mercy's sake get me a drink of water."

Sim obediently started for the kitchen, but at the door his path was barred by Berkley Pendleton. Berkley's expression was decidedly unamiable. There was a sinister gleam in his eye and red patches showed on his high checkbones. His words were fraught with deadly purpose and a perceptible odor of alcohol.

"I want to talk to you, Mr. Hoisington, sir," he said with severe dignity; "outside and now, sir."

Sim looked at him wonderingly. "Well

Sim looked at him wonderingly. "Well, walt until I get Aunt Hitty a drink," he said at last.

said at last.

Berkley swayed slightly and his frown deepened. "I've a partickler respect for Miss Hitty," said he, "and I'm a gentleman and know what's a lady's due; but in a case like this yer Miss Hitty's got to wait. You come along with me."

Sim hesitated, but Berkley took him by the arm and led him out of the house and into the barnyard. In the shadow of the

into the barnyard. In the shadow of the barn he halted and released Sim's arm; then, backing a couple of paces, he suddenly jumped into the air and cracked his heels

together. Alighting, he snapped his fingers in Sim's face and took another backward step that

was almost a caper.
"I'm a rip-roarer," he announced impressively. "I'm cold p'isen an' red pepper.

pressively. "I'm cold p'isen an' red pepper.
I'm a cutter and a cyarver. I'm a tearer
and a render!"

"Certainly," assented Sim. Then coaxingly: "Le's us go take a drench at the
water trough, Berk. Freshen us up a right
smart."

M. D. "

smart."
Mr. Pendleton disregarded the suggestion. "Bein' what I am, I aim to ask you
a question," he went on. "Bein' what I am,
I aim to have you answer it. What may
be your intentions with regards to Miss
Parsons Gellan?" Rowena Gollop?"

It was evident to Sim that, whatever his potations, the man was in sober earnest. He meant to know. Sim considered, conscientiously considered, and found himself uncertain. After a pause he owned that he

uncertain. After a pause he owned that he was,

"Dogged if I can tell you," he said.
"Sometimes—— No, I hain't made up my mind as to intentions in no direction. Mabbe——" He pondered absently.

Berkley shook a long, bony forefinger at him. "I'll tell you what your intentions air," he snarled. "They're to keep away from the lady I've named and stay kep away. I've got my intentions, which is hon'rable and sot, an' I warn you off. If you cain't make up your mind to keep away and stay kep' I aim to split you open like a ripe melon."

He danced a step or two, and as for a moment he emerged from the shade of the barn, a knife flashed in his hand.

"I'm a rip-roarer," he chanted. "I'm a cutter and a cyarver! You made up your mind to keep away and stay kep'?"

"I don't want no trouble with you, Berkley," Sim answered. "Don't act foolish." He eyed the grotesque, capering figure watchfully.

"You made up your mind?"

watchfully.

watchfully.

"You made up your mind?"

"No," roared Sim. "Now, daggone you, keep away from me or I'll hurt you."

Berkley jumped for him and Sim dodged. Again the rip-roarer circled, and again leaped in with a vicious swing of his knife that the young man harely avoided.

that the young man barely avoided. "Try that again and I'll cuff you,"

warned him sharply.

Berkley tried it. There was an instant whirl of action, a sharp smacking sound. and Berkley Pendleton toppled backward fell with a thud in the dust and lay quite still. At the same moment there was a quick rustle of skirts, and a bulky form brushed by Sim and plumped down at the side of the prostrate man.

"I reckoned there was suthin' like the happenin'," said Aunt Hitty's voice in a tone of marked displeasure.

"You great big lummox, hittin' the pore man that-a-way! Ain't you —— Sim, I b'lieve he's daid!"

b'lieve he's daid!"
"I reckon not," drawled Sim, picking up the knife and tossing it away. "Some water's all he needs. He's stirrin' now."
He went to the watering trough, where he found a pail which he filled and brought

back.

"Now you clear right out," said his relative, dipping her handkerchief into the water and applying it tenderly to Pendleton's brow. "If anybody comes I'll fix up some story. No need o' you bein' here. What you say, Mr. Pendleton?"
"I'll cut his heart out," mumbled

Berkley.
"Well," mused Sim as he walked away, "it cert'nly does seem like I'm sort o' fo'ced for to court Rowena now."

Just as he approached the house a man came out and advanced quickly to meet him. Stopping directly in Sim's path, with arms truculently akimbo and chin outthrust, this person spoke in a voice husky with emotion: "I've been a-lookin' for you, Sim Hoisington. You an' me has got to have a talk together."

have a talk together."

Sim gaped at him. "What's pesterin' you, Ben?" he asked innocently.

"You air," Foster growled. He looked back over his shoulder. "Let's move over toward the barn," he proposed.

"I reckon if it's anythin' private we'd better go the other side of the house," Sim suggested. "It's right secluded in the orchard." orchard.

In a few minutes the two came to an open space between the apple trees. There

open space between the apple trees. I here
Foster whipped off his coat.

"You'll ketch cold," drawled Sim.
"Cain't you talk just as well with your
coat on?"

"I allow there hain't much to be said,"
Foster sneered. "You're aimin' for to take

Foster sneered. "You're aimin' for to take my gal away from me, hain't you?"

"Lisbeth?" For the moment Sim's obligation to Rowena was forgotten. He was not quite clear on the point. "Mabbe I am," he said, "and then again mabbe I hain't. I couldn't azackly say, Ben."

"You'll quit shinin' up to her or you'll take a lickin' right now," declared Foster. Again Sim reflected. "Why, as to that, I couldn't quit on no other fellow's say-so," he said slowly. "An' as for the lickin'," he went on, "I don't keer to take that, Ben. I b'lieve I'd get right mad if you even started for to lick me."

Foster's reply to that was a swinging

Foster's reply to that was a swinging blow that took effect behind Sim's ear. Sim staggered back, tripped on a root and went down. Instantly gathering himself together he dived at Foster's legs and heaved. Foster pitched over his advergant's shoulder and landed on his devent sary's shoulder and landed on his head, continuing the evolution in a partly involuntary somersault that gave him a chance to scramble to his feet. In the mean time Sim had regained his footing and, as he had predicted, lost his temper.

The fight was too fierce to last long. It was a pummeling match pure and simple— "fist and skull," as the phrase went on Little Tarkio. Evenly matched in strength and activity as the two young men were, the result was likely to be determined by their endurance rather than their skill, but in the end, when the two fell, Sim was upper-most and lost no time in taking advantage of his position.

"Had enough?" he asked presently, suspending operations.

Foster wriggled feebly and gasped an

insult.

"I'll cert'nly give you all you want,"
Sim declared. He drew back his fist, but
hesitated before the helplessness of his foe.

"Shucks! Get up, then, you crazy loon,"
he permitted, himself rising. "Want any
more now?"

Foster, though tottering, was indomitable. "I'm whipped now," he muttered through swollen lips, "but you keep away from Lisbeth or I'll wipe the ground with you first time I see you."

"He wished up his next and the two re-

He picked up his coat and the two re-turned to the barnyard and the watering trough, where they laved the stains of conflict side by side. Presently Sim turned a bruised and serious face to his late

antagonist.

"Ben," said he, "I hate for to have trouble with you, but I reckon I'm sort of obliged now to keep right on with Lisbeth—kind o' fo'ced to."

Nevertheless it was not until Saturday, four days later, that Sim took any sort of action in the delicate situation. During that time affairs had become even more

complicated. Following the night of the dance Berkley Pendleton had called and taken Aunt Hitty to prayer meeting. He had met Sim and had made no hostile demonstration whatever during the uncomfortable quarter of an hour spent on the porch. The next day Aunt Hitty went to town and did some trading. That was Thursday. Sim and Abner, postponing the fencing, started haymaking that day, and from the field Abner pointed out the returning light wagon with Berkley Pendleton's saddle mule tied behind it and Berkley occupying a seat beside Aunt Hitty.

"Sort o' rushing things," commented Abner.

But at the yard gate Berkley resumed his mule and rode away. Friday the hay claimed Sim's attention Friday the hay claimed Sim's attention inexorably, but he was uneasily determined to do something. What? There was the rub! Then came Saturday and the jolt.

"Berkley Pendleton is a-comin' to Sunday dinner, Sim," announced Aunt Hitty after the noonday meal.

Her rather comely, entirely comfortable face was unaccountably flushed; her usual breathlessness was increased so that her

breathlessness was increased so that her ample bosom heaved quite tumultuously.

"I reckon I might as well tell you that Berkley and me aim to get married right soon, Sim. I hate to leave you, but I'm gettin' along to an age where I ought to get settled in life. I'll see about gettin' somebody to do for you though, Sim—if you cain't get no one yourse'f."

cain't get no one yourse'f."

Sim went out to the barn and, after sending Abner to the field, sat down to think it over. What a world! What a puzzling, mixed-up mess! What did it all mean and who and what was right? Politics, religion, love—no straight, plain main road anywhere.

"Got to do somethin'."

"Got to do somethin'."

He got up and began mechanically to room and harness his sorrel driving mare. His mind still in chaos, he ran his buggy out and backed the mare into the shafts. In the same mental daze he got into the buggy and presently found himself on the road—to where?

He had told Lisbeth that he would be up to see her and she would be looking for him. Also his manhood compelled defiance of Foster's threat. There was Pendleton's threat too. Under the circumstances it was unlikely that Berkley would make trouble now; still, the threat remained. Besides, he would have to pass Gollop's place—unless he turned off the road and made a wide circuit. Then he could stop at Rowena's on the way back.

So musing, he turned off the road—and within a mile he was on the point of turning back again. The mare decided the matter by speeding on, but not in the way Sim expected. She had covered another half mile when she shied at a blue sunbonnet that showed above the hedge, and by the time Sim had her under control Rowens Gollop was standing in the road swinging a pail half full of blackberries and laughing at them.
"Travelin' or goin' somewhere, Sim?"

Rowena hailed him.

Sim heaved a sigh of pleasure and relief as he looked at her. "Jest a-travelin', Rowens," he replied, smiling wistfully. "Jest a-travelin'. I hain't never goin' nowhere."

She approached the buggy and lifted the pail to him. "Have some," she invited. "They're right good. I'm a-goin' to make a pudden of them."

"I'd like for to taste the pudden," said Sim, as he helped himself to the fruit.

"I ain't goin' to give you no bid," she answered cruelly, and then went straight to the point as was her way. "So you was

the point as was her way. "So you was fightin' the other night at the dance, Sim? What was the trouble with you an' Berk Pendleton? Oh, don't hum an' haw! Tell

Sim looked at her. Her expression com-

pelled a truthful answer.
"Well, Berk allowed he aimed to marry you and warned me off. He got kind o' rambunctious when I wouldn't agree for to stay away from you. 'Twan't nothin' ser'ous, Rowena.' Sim pulled a handkerchief from his pocket and wiped his face.

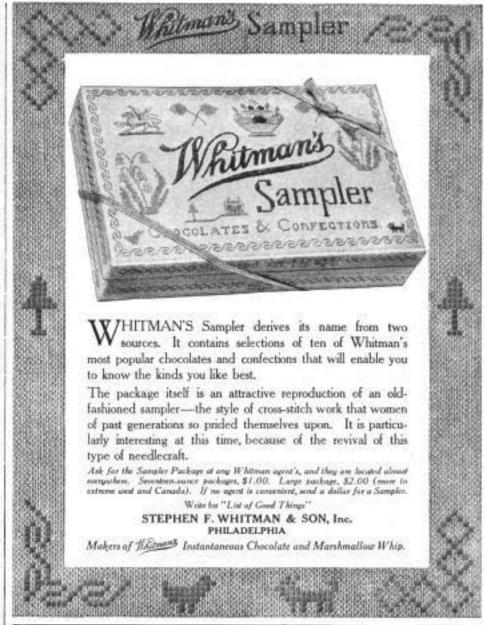

"You didn't want for to stay away from me?" the girl asked softly. "I cert'nly didn't," replied Sim with particular emphasis.

particular emphasis.

"And you an' Ben Foster fout, What for was that, Sim?"

"Oh, shucks!" Sim ejaculated. He wiped his face again. ""Twan't nothin'."

"What for was that, Sim?"

# The Howard Watch

HE predominance of the HOWARD Watch among yachting men illustrates some interesting conditions in American business and professional life.

There is in this country no exclusively yachting class, as such. Practically every American yachtsman is a man of affairs, who finds his greatest relaxation on the water, and who takes his HOWARD Watch with him when he goes aboard.

The thing that makes him a yachtsman and an American disposes him to like the HOWARD Watch-with its fine traditions, its trim, racy lines, and its way of showing its clean American heels to the talent of the watch-making world.

The wonderful character of the HOWARD Watch is that it meets men of so many different kinds and occupations on their own ground. Men in com-merce, in the technical industries, in the professions, in official life.

A HOWARD Watch is always worth what you pay for it.

The price of each watch is fixed at the factory and a printed ticket attached -from the 17-jewel (dsuble roller) in a Crescent Extra or Boss Extra gold-filled case at \$40, to the 23-jewel in 18K gold case at \$170-and the EDWARD HOWARD model at \$350.

Not every jeweler can sell you a HOWARD Watch. Find the HOWARD jeweler in your town and talk to him. He is a good man to know.

Admiral Signbee has written a little book, "The Log of the HOWARD Watch," giving the record of his own HOWARD in the U. S. Navy. You'll enjoy it. Drop us a post card, Dept. N, and we'll send you a copy.

E. HOWARD WATCH WORKS BOSTON, MASS.

Canadian Wholesale Depot: Lumsden Bldg., Toronto

# We Want Your Boy

We desire to give him a chance to earn as much spending money as you are willing that he should have and at the same time get a lot of the sort of premiums which every boy wants. During some of his leisure time this summer he will have a splendid chance to earn his spending money and to get an experience which will be of inestimable value later in life. Thousands of other boys will do the same thing—in fact they are doing it now, selling The Saturday Evening Post and The Ladies' Home Journal. If he'll write to us, we'll tell him all about it.

We'd like to send to you a copy of a unique booklet entitled "What Shall I Do With My Boy?" It tells how a lot of parents have solved "the boy problem" and will give you an interesting half hour's reading if nothing more.

Sales Division, Box 538

THE CURTIS PUBLISHING COMPANY, PHILADELPHIA, PA.

"Well, it—it was this-a-way," the young man stammered: "Ben took a notion I was

warned me off."

"You didn't want for to stay away from
Lisbeth?" pursued the inquisitor relent-

Sim looked at her imploringly. She met his gaze and held it until he bent forward and took the hand that she had rested on the dashboard. Then a wave of color swept

the dashboard. Then a wave of color swept over her face, and for the first time Sim saw her disconcerted.

"It's all scratched up with them briers," said Sim, and lifted the hand to his lips. "I don't never want for to stay away from you, Rowena—but somehow—a fellow don't sometimes just know——"

He stopped, for Rowena put a foot on the step and leaped into the buggy. Her face was rather pale than rosy now and her mouth was set. She clucked to the mare, who started forward and set off at a spanking trot.

spanking trot.
"Which-a-way we'd best go?" Sim queried in a shaking voice, after a moment

or two of highly significant silence.
"Preacher Coles," Rowena answered.
And at that Sim turned to her a face

And at that Sim turned to her a face luminous with joy.

"Mind your drivin'," cautioned Rowena.

"You know why I like you, Sim—well enough to let you run off with me this-a-way? Is pose it's because your ideas are the same as mine. You're a hard-shell Baptist now and forevermore, and nothin' won't stir you the width of a rat's whisker. You're a rock-ribbed, dyed-in-the-wool Democrat, an' you don't scratch your ticket for Bud Watts nor nobody. You hold with a man makin' up his mind and hold with a man makin' up his mind and stickin' right to it through thick an' thin an' whether or no—unless his wife sees some good reason to alter it. Is that right, Sim, or "-Rowena's firm voice faltered a little here-"or would you like to let me

Sim's arm went round her and held her close as he urged the mare to greater speed.
"You're right about everythin', Rowena," he said. "Gosh! I feel like a ton weight had been took off'n my shoulders.
I want to whoop. Lordy, how I need you!"
"Mind your drivin', Sim," cautioned
Rowena. "Well, then, give me the reins."

## The mutineer of THE MARY BLOUNT

(Continued from Page 18)

affection for another. Then she saw Crandle watching her from under bent brows, and she waved her hand to him. Then she sent her soft trustful eyes upon

little trips aloft and alow, as if to store her mind with pictures to look at during the long hours in the dull, eventless cabin. Captain Haithway accompanied his wife

Captain Haithway accompanied his wife below, and returned almost instantly dressed in his oilskins. He was no longer smiling, and he began to give orders that rang over the whole ship.

Till now only the major preparations for riding out a hurricane had been taken. There was plenty of time, and the young man did not wish his wife to suspect the gravities and anxieties of the situation. So gravities and anxieties of the situation. So a surgeon keeps concealed from the pa-tient's eyes the ghostly, clinking preparations in the operating room. But now the Mary Blount became the scene of a hundred swift and ominous activities. Life-lines swift and ominous activities. Life-lines began to spread from point to point like a spider's web; everything movable went below; the pumps were tested. The nest of spare boats was swung between the main and fore masts, high enough to clear a strong man's head, and strongly braced so that they could not swing amuck. Whatever might be expected to give under terrific strain was looked to and reinforced when strain was looked to and reenforced when

of all the Mary Blount's great spread of canvas only one little patch was left standing. She lay broadside to the coming storm, rising to the tops of the rollers, and dropping with a smash and squirting about of white water. Now and then she appeared as if she was nodding to herself, as much as to say: "This may be your first hurricane, but it isn't mine. I'm not afraid

of it."

So Hector felt, waiting under the walls of Troy for the vengeful Achilles. But in the as everybody knows, tricked by the great hero turned and ran. And ly the Mary Blount, a kind of

MEAD CYCLE CO., DEPT. N-55, CHICAGO, ILL. | head of the dead woman resting in his lap,

sigh running through her rigging, turned a little upon her keel and began to retreat. To the westward, from horizon to zenith,

the sky was one great smear of black ink; the sea was a field of snow.

And then, though it was still calm on deck for one long instant of time, the wind seized the Mary Blount by the upper spars and threw her hard on her side and began to drag her off. So in cave days your ancestor or mine may have seized his beloved by the hair, thrown her and dragged her off to his cave.

From within the Mary Blount there came one prolonged cracking and smashing. She might have been a ship from the Orient deep in china and porcelain. Her one sail tore from its place with the noise of a cannon shot, and in a moment had disappeared far to leeward, not in the sea but in the sky!

the sky!

And then, righting a little, the Mary
Blount began to travel under her bare poles
faster than she had ever traveled before.

It became dark as night. The yells and
screamings of the wind were as the voices
of Lucifor's army sacking a city in heaven. of Lucifer's army sacking a city in heaven. Of human sounds there were none. Even when one of the men—you cannot say at the wheel or the rudder, for the Mary Blount's steering gear was a Noah's Ark combination of both—had his whole side stove in by an uncontrollable leap of the apparatus, the other man could not hear his cry of anguish. Solid green water fell upon the deck in

long-drawn thunder. When this had slid back into the sea the hurt man was gone, and Crandle, his beard standing at right angles to his chin, had taken his place. No man on that ship knew when day

No man on that ship knew when day passed into night.

No man knew that in the captain's cabin, clinging to the leaping, plunging bed, a woman had ended her day of fear, and was entering all alone without help, without mercy, so it seems, human or divine, upon her hours of agony.

It must have been early in the morning, If must have been early in the morning, differentiated only from the night by its greater blackness, that Captain Haithway went below. Only Crandle saw him go, and only Crandle saw him crawl and stagger back to the deck. To Crandle for some time now it had seemed as if the main fury of the hurricane had passed.

It was rather a seeming, an intuition, then any actual phenomenon of physical

than any actual phenomenon of physical diminution to which Crandle could have pointed.

He watched Captain Halthway drag him-self to the lee bulwarks, clinging to a life-line, and followed him with a bold, lawless glance; for all night the seaman's imagination had been hanging upon the man who had been washed overboard.

Having reached the mizzen-shrouds, Captain Haithway climbed slowly into them, and clinging tightly, looked down into the sea that now was dizzily far below his feet, and that now rose as if to strike him in the

face, You could have knocked Crandle over with a feather. Why a man in his senses should deliberately place himself in so suicidal a situation was utterly beyond him. It was with the idea of warning him of his peril that Crandle began to move warily across the deck; but it was with no such idea that he kinself error presently to the idea that he himself came presently to the mizzen-shrouds and began to look this way and that in the darkness to see if any one was watching him.

But each man on that ship was intent upon his own destiny. And in that dark-ness only the main shapes and motions of

things were perceptible.

A dozen men might be looking, and not be able to swear upon the book that the murder which they saw done was not an

Crandle looked up and could see his captain's face; could see it, could read the message of it like words in a book. It was the face of a man who asks for nothing but

The vessel rolled lower and lower: just as she glided into the first upthrust for recovery Captain Haithway merely let go with his hands.

Crandle had not touched him. Nay, the wicked man's hard heart had turned to milk, and those sounds which came from him, though no man could hear them in the howling of the wind, were dry sobs of anguish.

After a little Crandle descended into the cabin. And there they found him at last, when the hurricane had fallen to a gale, the

This is an unretouched photograph of an auto Top covered with NEVERLEEK. It has been in daily service for a year and a half. It has stood much of the time before the owner's factory, under melting snows of Winter-under blazing sun of Summer.

Note the smoothness of the Top - not a wrinkle or crease, despite constant folding and unfolding. Aside from a slight dulling of the finish, the owner says it looks as good today as the day it was put on. This is the kind of service

TRADE MARK

#### TOP MATERIAL

Guaranteed Without Limit

NEVERLEEK is guaranteed absolutely waterproof, under all conditions, without

time limit. Your Top will be re-covered free if it ever leaks through the fabric.

NEVERLEEK is so "tight" that a steady hydraulic pressure of 200 pounds to the square inch failed to force water through it.

Yet it is so pliable that it stands endless folding without cracking or blistering.

Many of the best cars include NEVER-LEEK TOP as regular equipment. Ask for NEVERLEEK on your new car.

If your old top needs re-covering, specify NEVERLEEK. Write today for samples of new semi-bright and dull finishes which you can test for yourself.

Y EVENING POST, PHILADELPHIA, PENNA.

and the little baby for whom she had given her gentle and blameless life asleep in his great tender arms.

THE gale fell to a brisk, pleasant wind; the mountains of water became hills and the sun shone with delightful brilliance. Of the difficulties left in the wake of the hurricane there was only one which seemed insurmountable to the men of the Mary Blount. Damages could be repaired in a trice. Already the body of Mrs. Haithway trice. Already the body of Mrs. Haithway had been sewn in canvas and committed to the deep; there being among the men but one pair of dry eyes—those of him alone to whom her death meant everlasting sorrow. Mr. Tuttle had watched them slide her into the sea with a peculiar and morbid interest. And he wondered if he, too, would be so buried, and how soon. A very sick man when the hurricane began to blow, he could hardly keep his feet now, hardly lift the little prayer book to read the words for those who are buried at sea. Even if Mr. Tuttle should die, the ship's difficulties might well be surmounted—all but the one. How can strong men stand about and see

might well be surmounted—all but the one. How can strong men stand about and see a little baby starve to death? There was no provision for babes aboard the Mary Blount, and already little Miss Haithway was giving signs of incipient appetite.

"She'll be all right on water for twenty-four hours," commented a father of more than one family, "'n' then she'll want milk."

"Is there nothing we can give her?" asked Crandle angrily.

The father of families shrugged his shoulders.

shoulders.

shoulders.

"We can keep her alive for a few days on biscuits 'n' water 'n' treacle 'n' water."

"For a few days!" And he looked down into the little sleeping face, lifting a corner of the blanket in which he had wrapped her. He went the length of the deck and back, heavy with trouble. Then his roving eyes came to halt upon a whale boat and flamed with sudden hope.

Mr. Tuttle had just finished working out the position of the ship.

the position of the ship.

"The storm seems to have been circular, Crandle. We are actually nearer Honolulu than we were."

"That's good. Then we'll save her yet. I want leave to go on ahead with her in one of the boats."

of the boats."

Mr. Tuttle pulled a doubtful face.
"I'm a dying man, Crandle," he smiled
wistfully. "What becomes of the ship with
you gone and me gone?"

"The men will be proud to take that
chance for this baby, sir. And besides, that
there Bowers can keep the ship to a course
till I make shift to pick her up again."

"We must promote Bowers. It wouldn't
do for our only surviving navigator to

"We must promote Bowers. It wouldn't
do for our only surviving navigator to
be the cabin boy. But you seem to have
adopted this baby, Crandle?"

"Yes," said Crandle. "And God help
me to be a good man!"

He lifted a corner of the blanket, and the
man who was dying and the man who had
iver hearing to live smiled with great tender.

just begun to live smiled with great tender-

just begun to live smiled with great tender-ness upon the baby.

"Takes after her mother," said Mr.
Tuttle. "Yes, you may go ahead in one of the boats, Crandle. It's the only chance for the baby. Put her in good hands. If you are short I have a little money. You have no doubts of finding your way?"

"None."

"Then the sooner you start the better."
"I'll pick you up again somewhere between here and Honolulu, Mr. Tuttle."
"You won't wait for us?"
"No, sir; I'll start right back. If I don't

None.

pick you up in twenty-four hours or so, why I'll know we've passed each other and I'll run back to port."

On the eighth day anxious eyes beheld against the first amethystine premonitions of land a speck of sail. And the boy Bowers, handling the late Captain Haithway's telescope with as much knowingness as if he had invented telescopes, made her out to be the missing whale boat, returning from Honolulu with Crandle at the steering oar.

The boy Bowers stepped below and threw open the door of Mr. Tuttle's stateroom.

"Hawaii's in sight, Mr. Tuttle, and so's Crandle."

Mr. Tuttle shook his head a little and smiled, but said nothing. Then he turned quietly on his side and with a long sigh of relief died.

The boy Bowers went on deck looking very white and crying a little. "Poor Mr. Tuttle is dead," he said, and gave orders to luff ship and was very smartly obeyed.

# Vest Pocket KODAK

with Kodak Anastigmat lens

A vest pocket camera that will really go in the vest pocket comfortably. And not only does the Kodak itself go in the pocket, but it is self contained, carries within itself the films for eight exposures.

A lens that gives microscopic definition and has speed to spare, a ball bearing shutter that works silently, accurately, without jerk or jar.

In this camera Kodak simplicity and the utmost convenience are combined with an optical quality that perfectly meets the requirements of those who demand an instrument of the highest type.

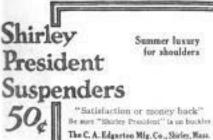

Price, \$12.00

If it iin't an Eastman, it isn't a Kodak.

Catalogue free at your dealer's, or by mail.

EASTMAN KODAK CO., ROCHESTER, N. Y., The Kodak City.

Twenty minutes passed, and the whale boat was now visible in all detail to the naked eye.

Suddenly one of the men shouted: "He's brought the baby back with him!

Yes, he had brought the baby back, and a sack full of island toys and a couple of milch goats, and he had brought with him Miss Bettie Paaeua, from whose deep brown breast the baby was at that very moment drawing warm, delicious milk and a love, I daresay, of swimming and the sea.

"But ain't we going to have just one night ashore?"
"That's for you to say, boys. Now listen: If we visits Honolulu the owner's representative visits us. And we gets a new captain and a new mate. Do you want to risk that, after Captain Haithway and Mr. Tuttle?"

A night ashore still looked alluring.

"And," said Crandle, "he'd take the baby away from us. How about that?"

"What's a night ashore anyhow?" said Shattuck. "Only a headache."

"But," one of the men objected, "not taking the ship in to report kind o' smacks.

taking the ship in to report kind o' smacks

of mutiny.

of mutany."

Crandle bent his bushy brows.

"To me," he said, "the notion of losin' my baby kind of smacks of hell. If we take this old bottom to the Indian Ocean where she's bound, and brings her back home brimful of oil, the sourest owner in Hanleytown won't talk about mutiny-no, sir.'

There were still murmurs in the men's voices and doubts in their eyes, when suddealy there came from the stern of the ship the noises of a baby in a rapture of some

sort or other.
"That settles it," said Shattuck, and

That settles it, said Shattuck, and laughter ran about the circle.
Then Crandle gave his orders.
"The baby and her nurse will have the captain's stateroom and the run of the cabin. You, Corning, as was raised on a farm, will have charge of the goats. One other thing: Miss Paneua has her faults, but she's left 'em all ashore. And the man that don't treat her like a lady will get treated like a

dog!"
"Beggin' your pardon for interruptin',"
said the man Corning; "but if I'm to have
charge of the goats I'd like to know what
I'm to give 'em to eat."

For once in his life Crandle looked very foolish. And there rose at his charges so great a roar of Homeric laughter that pres-

ently he was laughing too.
"Well," he said, "you can write home that, though you missed a night ashore, you

that, though you missed a hight ashore, you all had fresh meat for dinner."

"Beggin' your pardon," said Corning,
"but how if anything was to happen Miss Paseua and no goats to fall back on?"

"How?" said Crandle. "I brought off enough preserved milk in the boat to raise a baby whale."

Three years later the old Mary Blount sailed into Hanleytown Harbor with a rec-

ord cargo of oil and a barrel of ambergris.

Mr. Bowers, late the "boy Bowers,"
finished writing the last entry in the log:

"Everybody excited about baby seeing
America for the first time. The Mary
Blount is heading for the Long Wharf. And as any one can see it plain as the nose on his face, nobody but a fool would take the trouble to work out the ship's position, and thank God for that. So ends this day. And all's well."

Did the owners of the Mary Blount have the law on Crandle for mutiny? You should have seen their old Puritan faces peering into the barrel containing the ambergris!

(THE END)

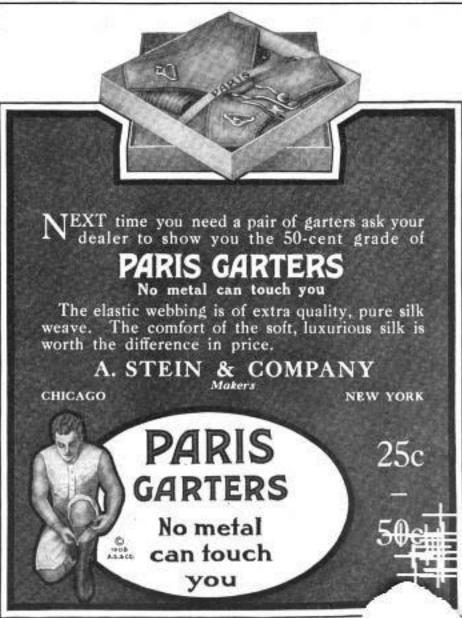

## Cheap Power

NATURAL steam coming up through the ground is a cheap power for running an engine in the Northern Tuscany mountains. Lakes of bot water in the vicinity of the steam holes contain much boracic acid, and a manufacturing company uses the natural steam to run machinery for extracting the valuable boracic acid

from the lake water.

The only difficulty in this pleasant state of affairs is that the steam itself is so highly charged with boracic acid that it would injure the blades of a turbine engine; so the steam is used to heat up an ordinary boiler, and the steam from the boiler is then used in the turbine. The steam is caused by volcanic action and comes up through blowholes at a considerable pressure.

# The Motorcycle Tire that Won

### Breaks All Records - Removes All Risks

In four short years Goodyear Motorcycle Tires have forged to the front. Today they are so far ahead that three-fourths of all motorcycles sold in 1914 will be Goodyear-equipped.

Men have come to know these motorcycle tires for what they are. Have come to realize their matchless value - shown by their longer life - their greater mileage - their utter serviceability under all road

### True Leadership

In this short time Goodyear Motorcycle Tires have won and held every road and track record. Such leadership can only come of master-quality-superservice. E. G. Baker's recent recordbreaking motorcycle trip, from coast to coast in 11 days and a half, was made on Goodyears.

## Like Goodyear **Automobile Tires**

Since users have metered their mileage, Goodyear

leadership in the field of automobile tires has been all the more pronounced. And the same innate quality, the exclusive equipment, the expert knowledge - all are

motorcycle world.

Here is a piece of Goodyear Lawn Hose that was bent double and tied for nine months. When it was released it showed absolutely no stretch or strain at the bending point. This was because of its scientific construction, the corrugations and the six heavy rubber ribs that run its full length. These ribs also protect the hose against rough handling, prevent "kinking"; also add to the "glide" when hose is being yanked over the ground and around corners.

#### Five Separate Layers

The live inner tube and four alternate layers of rubber and braided jacket are

of the highest grade rubber and cotton. The five thicknesses are "cured" to one solid air-proof, waterproof, wear-proof unit that gives years of unusual service.

Buy lawn hose wisely. Say "Good-year." That insures years of service— and better service. If your dealer happens to be out of Good-year Lawn Hose, Just send us his name. (100D) YEAR

### Seamless

Lawn Hose Goodyear Hose is absolutely seamless. The corrugations and ribs make it easy to handle. The Good-year "Wingfoot" trademark is on every foot. Such hose saves you money season ofter season

### BUSINESS AT JUDI-CIAL DISCRETION

(Concluded from Page 9)

against the industrial oppression observed to be on the way. The oppression of the people by large combines in restraint of trade has been onerous and bitter. Small dealers have been driven out of business; huge industries have been joined; high prices have been maintained and a variety of oppressions have followed; and the con-dition of almost industrial slavery which the

great judge saw on its way has arrived.

The wrongs that make this situation possible ought to be prevented by law. They are great wrongs and the laws against them ought to be drastic; but they must also be

These crimes against our commercial civilization ought to be catalogued and prohibited by specific acts; but when this course is proposed we are met by the suggestion that we have reached a point where the meaning of the law is generally under-stood by the courts.

We are told that the wrongs against which the Sherman Law is directed cannot be suf-ficiently defined to enable them to be enacted into prohibitory statutes, but that judicial interpretation has made it clear to the people what can and what cannot be done under that general statute.

The argument does not seem convincing. If the decisions of the courts have now de-fined the wrongs prohibited by this act; if they have defined them so that the judges now know what the offenses against the act are—then surely these decisions have de-fined them so that we may catalogue them and prohibit them in terms of law. And if they are not sufficiently determined to enable us to prohibit them in terms in a stat-ute, then they are not sufficiently defined for the courts to prohibit them in an administration of the statute as it stands.

#### Many Judges, Many Rulings

In other words, if the judges know precisely what acts are criminal under the general, vague terms of the Sherman Law, then they can tell us what those acts are and we can put them into the law of the land.

Judicial explanation has not always made a statute clearer to the common man. Learned opinions have sometimes reminded

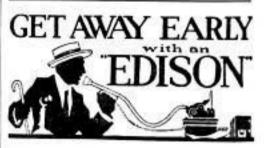

us of Lewis Carroll's exquisite example of interpretation: "Be what you would seem to be. Or, if you would like it put more simply,' said the Duchess, 'never imagine yourself not to be otherwise than what it might appear to others that what you were or might have been was not otherwise than what you had been was not otherwise than what you had been would have appeared to them to be

As the law now stands, every case must be decided for itself according to the rule of reason as interpreted by the presiding judge. There will probably be as many decisions as there are cases, and as many variations of the rule of reason as there are individuals on the bench. Moreover, the attorney-general will be clothed with a power of discretion greater than any ruler of any modern despotism. He may be in every instance a great, incorruptible patriot, but the admin-istration he represents cannot escape the

What is it that corrupts the electorate of a country? Is it not the belief of certain interests that they may obtain some advantage, either by the enacting of laws or the administration of them? If the attorney-general and the courts are to say what are good and what are bad trusts; what business interests shall be permitted the privileges of a restraint of trade; to which ones the rule of reason shall apply or not apply then it will be to the advantage of those seeking the great privileges under this indefinite law to see that an administration favorable to them is returned and that udges favorable to their enterprises are elevated to power.

The people of this country believe themselves to be the source of all authority. They are not willing to permit the judges either to make the laws or to sit as boards of control to determine how the people are to conduct their business affairs. To do so would make the indiciary supreme, with authority of W whover the conduct give the ore power than a republic. 20115

## THE ARGONAUTS

(Continued from Page 13)

and Susy knew their place. They went out, driving the hens before them. Mrs. Cassidy took the loaf out of the pot oven and set it on the table to cool. Then she sat down again on her stool and went on with her story:

Seemingly he was contented enough and had given up the notion of America when he seen that his aunt was against him going. It was well pleased we were. His father gave him a calf for his own and I took care that he didn't want for a shilling in his pocket, so as he wouldn't be ashamed before his comrades—and them maybe spending more or less in the town after a football kicking or the like.

"Well, for as much as six months there wasn't a word out of him about America, and we thought he was settled down for good. Then one day, all of a sudden, he walked in on us, the same as it might be you walked in on us, the same as it might be you walking in this minute: 'I'm off to America to-morrow,' says he. 'I've sold the young bullock'—it was a young bullock the calf was by that time—'and I have my passage booked; and there's no use your talking, for my mind's made up.'

"I knew well enough it was no use talking, for Sonny was always terrible stubborn.

ing, for Sonny was always terrible stubborn once his mind was made up. He wouldn't change, not if the King of England was to go down on his knees to him. He went the

"He'll be back some day," I said feebly.
"He'll not be back," said Mrs. Cassidy;
"or if he is I won't be here to see him. I buried one boy and I've lost the other. Is it any wonder my heart is broke in pieces?"

A poet—Tennyson, I think—speaks of the words of the comforter as "Vacant chaff, well meant for grain." I felt the truth of this description when I tried to talk to Mrs. Cassidy. She felt the same thing, I suppose, for she cut me short. "Never a word did we hear of him or from him from that day to this," she said. "I made

Norah Kate write a letter to his aunt out in Pittsburgh, to know if she'd seen the lad. It was a good letter and well written, though Norah Kate isn't the equal of Sonny for writing. But what use was it? He hadn't been near his aunt-nor she hadn't heard from him. All she said was that America's a big country and Michael Antony might be somewhere in it without her knowing. It was Michael Antony she said in her letter, not knowing that it was Sonny we always called him, though, of course, Michael Antony was his name."

I plodded home that evening along the muddy road and my beart in me was as sorrowful as the gray clouds which hung low above my head. Mrs. Cassidy's trag-edy is the tragedy of Ireland. Their names are many, though we call them all Sonny. They go from us to a land that is very far off and we are left to grow old alone.

It was on Christmas Eve that I saw Mrs. Cassidy again. I did not mean to go to see her; but I was passing along the road and Norah Kate was watching for me at the end of the lane, as her father had watched for

ne a month before.
"My mother says," she said, "will your everence step up to the house for a minute he way she'll be able to speak to you? For here's something that she wants to say.

It had rained steadily day and night ince the last time I visited the Cassidys' touse. The lane that led to it was like a unning river. I picked my way from one arge stone to another. I crawled along hrough deep mud beside the wall. Norah Kate, barefooted and therefore indifferent, plashed gayly beside me. Boots and rousers are a curse! If we had any sense re should wear kilts, as our remote ancesors did, and protect the soles of our feet rith sandals.

The yard outside the house was incredbly filthy. The manure heap and the igsty had—if the expression can be used of hern-overflowed their banks. The thatch f the house was sodden and stained green a great patches. I expected to see worse esolation inside.

I was mistaken. Mrs. Cassidy met me at he door. She was bright-eyed and alert, he wore a clean apron. A bright turf fire urned on the hearth. There were sprigs f holly in the jugs on the shelves of the

resser. "You've had news of Sonny!" I said. "Well, now, you're a wonderful man, so ou are!" said Mrs. Cassidy. "How did you know that, when it's no more than an

hour ago that the letter came?"

"It wasn't hard to guess," I said. "A
merry Christmas to you, Mrs. Cassidy!"

"I was sitting by the side of the fire," she
said, "after himself and the two little
girleens had their breakfast ate, the same I see now that I oughtn't ever to have given in the way I did. Well, I was sitting by the fire and himself was out about the place, and the two girleens was playing them-selves, when all of a sudden Susy ran in on

me \_\_\_\_"
"It was me and not Susy!" said Norah

Kate.

"What matter the which of you it was?" said Mrs. Cassidy. "My own belief is it was the two of ye together—and says she: "The postman's coming up the lane.' 'He is not!' I said. 'He couldn't be, for the lane leads nowhere but to this house-and who'd be writing a letter to one of us?'

"That was what I said; but I knew well that the postman was coming—and I knew that it was a letter from Sonny he had for me. I knew it by the way my heart was beating so as I could hear the noise of it with my ears—till all of a sudden it stopped entirely and I had to take hold of the table with my two hands, so as I wouldn't fall. That's what made me know there was a letter from Sonny; but I wasn't fit to go to the door to get it—not if I'd been given the crown of the Queen of Spain I couldn't have moved. Norah Kate got the letter." "Me, and Susy along with me," said Norah Kate.

She is a fair-minded child. She objected to being deprived of her glory as the first bearer of the news; but she was jealous for her sister's honor too. Norah Kate and Susy together had taken the letter from the

postman.
"I seen by the stamp on it," said Mrs.
Cassidy, "that it was an American letter; and as soon as I seen that, the sight of my

eyes went from me and I seen no more. It was Norah Kate read the letter."

"I did," said Norah Kate.

"Norah Kate's a good scholar," said Mrs. Cassidy; "and well she may be, for we've kept her regular to school; but sure it's small credit to her to be able to read Sonny's letter, for he's a beautiful writer.

Would you like now, your reverence, that she'd read it for you?"

Mrs. Cassidy fumbled in the bosom of her dress and drew out a letter, already crumpled with much handling—already, I think, stained with tears of joy. I spared Norah Kate the task of reading it again.

Sonny's handwriting is really very legible. "'Dearest Father and Mother,' he wroto: 'This comes hoping to find you as well as it leaves me presently. Within is an order for twenty dollars. It's what I'd like to have sent before, only I hadn't I'd not be a long as I'd nothing nor I wouldn't write so long as I'd nothing to send; but I've fine earning now and I've made good, which is what they say out here. I'd like you'd get something for the Christmas, and a cake or the like of that for Norah Kate and Susy. And you needn't be afraid of spending it—for there's plenty more where this comes from."

"My father and Susy is gone into the town," said Norah Kate; "and there's a grand doll, with a pink dress on her, in Mary Finnegan's shop, and it's to be got for Susy

"What signifies the doll, or the money either?" said Mrs. Cassidy. "It's the letter I'm thinking of. Go on with it now, your reverence. I'd never be tired listening

to it."
"The place I'm in,' Sonny wrote, would strike you as mighty queer, not being like what you're accustomed to at home. How's father? And how's the polly cow? And, hoping that you're keeping your own health, "'Your loving Sonny.'"

"It was Sonny we called him," said Mrs. Cassidy; "but his name was Michael Antony.

"'P. S.,' I read. 'I didn't go near Aunt Matilda, for fear she might think I was wanting something from her, which is what I wouldn't take if she offered it to meafter the letter she wrote saying it would be better for me not to come out. But I'll take a run down to see her some day when I'm through with the job I'm at. I want noth-ing from her now—thanks be to God! But it might be some time before I get going, for

Pittsburgh's a long way from this—farther than you'd think.'"
"Sonny was always terrible stubborn and independent," said Mrs. Cassidy. "Since ever he was in his cradle he'd do what he thought fit and do it the way he chose him-self. He'd not be under a compliment to e'er

I next heard of Michael Antony Cassidy—whom his mother called Sonny—under circumstances that made the rain-swept, desolate Connaught land seem like a half-forgotten dream. I was in the smoking room of one of the great liners, crossing the Atlantic for the first time in my life, and Atlantic for the first time in my life, and full of curiosity about the land I was to visit. In one corner of the room was a group of men playing some card game I did not understand. At other tables sat more men, talking in a lazy, desultory way. There is no use talking rapidly on shipboard. Why shoot remarks at your neighbor when you have all day long with pathing to do expent

shoot remarks at your neighbor when you have all day long with nothing to do except hand them to him quietly?

All by themselves in the farthest corner of the room sat the only two men who seemed to be in earnest about what they were doing. They were playing chess. Their absorption in the game must have created a kind of atmosphere round them that their fellow voyagers found distasteful. They were isolated and several seats were vacant near them. I sat down beside them vacant near them. I sat down beside them, not because I care much for chess—it is a game that bores me—or because I wanted to be earnest; but because I like to have room to stretch my legs and to spread my

I suppose, however, that their atmos-phere influenced me when I breathed it. I watched the game without knowing caring much about it; but I observed the players with some interest. They were both young men. They both had eagerly intelligent faces. The fact that they were not drinking either beer or coffee convinced me that they were Americans. Chess-players of any other nation drink either beer or coffee while they play. Americans seldom drink anything except iced water or cocktails—and neither one nor other is a possible drink while playing chess.

I guessed they were university men— possibly professors; certainly athletes. Then I guessed again, making up my mind that they were business men, with ample leisure for golf. They were certainly accus-tomed to use their brains. They certainly lived a good deal in the open air.

The game came to an end before I guessed any more. One of the players knocked the ashes out of his pipe and declared that he was going to bed. The other disclaimed sleepiness and lit a cigar. We began to talk and—of all subjects in the world—hit on American politics.

New politics is not in my entirion a fet

Now politics is not, in my opinion, a fit subject for conversation anywhere. If you talk your own politics—the politics of your native land—you are sure to lose your temper or else the other man will lose his. If you talk the politics of another nation you yawn and finally go to sleep, because all foreign politics, being quite incomprehensible, are dull. American politics is to me the dullest of all, because I never get anywhere near understanding it. Nevertheless it was American politics my keeneyed chessplayer talked.

I listened and gained nothing from his denunciation of one party or the other. I forget now which it was that he denounced. At last I asked my question. I call it mine because I have asked it eighteen times of eighteen Americans and got eighteen different answers to it: "Why is there no labor party in America—no labor party that runs candidates in frank opposition to Republicans and Democrats alike, as the English labor party oursees both Consequentions lish labor party opposes both Conservatives and Liberals?"

This is, I think, an intelligent question. There are laborers in America—immense numbers of them. It seems odd that they should be satisfied with either of the oldestablished parties. My new friend pondered the answer for a minute. Then he gave me his answer—a clear-cut, logically complete answer, which did not satisfy me

in the least.

"America," he said, "is a land of free opportunities for all. Any man, no matter how he starts, may become rich."

"Lots of men do," I said. "Look at—and—." I named two worthy millionand do be on hoard our

aires who happened to be on board our

"Well," said my friend, "if a man thinks he's going to be rich-and every laborer in

America thinks that-he's not going to help the other laborers to combine against capital, is he?"
I suppose my face showed that I did not

regard this as a satisfactory explanation of the failure of American civilization to pro-duce a labor party. My friend went on to justify his general statement by quoting

pastify his general statement by quoting a particular case.

"I'm an engineer," he said, "and I'm in charge of a big job away out in what you'd call the wilds. That section isn't settled much—just a few farmers scattered about; and my crowd fixed up in a little wooden town the company built for them. There are a couple of thousand of them—and a pretty tough lot they are—Slavs mostly. pretty tough lot they are—Slavs mostly, with a sprinkling of Italians. Scum!" He spoke the last word with a venom that

surprised me in a citizen of the land of human equality—the land that fought to secure the negro his rights as a man and a brother.

"Some time ago," he went on, "we had trouble with them—not a strike; it doesn't come to that—just trouble over some agreement the company made the men sign.

ment the company made the men sign. I'm not saying it was quite a legal agreement, for it wasn't; but it was good enough and nobody lost by it. Well, the trouble wouldn't have amounted to much if it hadn't been for a big, husky Russian—a sulky devil of a man who started about knifing the company's officers, chiefly me.

"I knew what was going on, but I didn't see my way to stop it. I just slept with a gun handy and kept my eyes open during the day. I watched that Russian pretty close. You can't blame a Russian, of course, for wanting to knife people. Murder seems to be the only way of getting the necessary reforms in their country, and this fellow wasn't long out of it. All the same, I didn't want to be an innocent victim."

I think my engineer friend showed a nice spirit in making excuses for the Russian.

spirit in making excuses for the Russian.

"Well, one day the whole conspiracy just got bursted. There was a little Irishman— the only one we had in the whole crowd, for the Irish are a bit above that kind of work now. The Russian was making a speech one evening and the rest of the men were one evening and the rest of the men were cheering him. He was a big brute, well over six feet high. I was a football player when I was in college, but I don't mind owning that I should have thought twice before engaging in a scrap with that Russian.

"My little Irishman didn't think more than once. He walked right up to the Russian, and when he was standing in front of him he didn't mach up heaven.

of him he didn't reach up beyond where the top button of the Russian's waistcoat would have been if he'd had a waistcoat. 'Listen to me now, son!' said the Irishman: 'Just you can that talk about knives and killing. It's not wanted here.' The Russian kind of collapsed, and that was the end of our labor trouble."

"It's an interesting story," I said: "but I don't quite see what it has to do with the curious fact that there's no effective labor roots."

party in America."
"It's got this to do with it: Cassidy expects to be a capitalist some day—and he doesn't want any Russian coming round and knifing him when the time comes. See that?

I did not even try to see it. The matter had ceased, for the moment, to interest me. My attention was fixed on the Irishman's

name.
"Did you say Cassidy?" I asked.
"Yes. And if you look out you'll see
that name on the list of first-class passen-

that name on the list of first-class passengers on one of these boats pretty soon. He'll be down as having engaged a suite of rooms on B Deck."

"Was he by any chance called Michael Antony?" I asked.

"The men called him Mick," said my friend; "but, of course, that's common with all Irishmen. Now I come to think of it, I believe it was Michael Antony he wrote when he signed on as overseer. I wrote when he signed on as overseer. I made him overseer after he'd laid out the

"That," I said, "was probably last November."

"It was—sure. But how did you guess?" "I happened to hear another part of the same story from his mother," I said. "It was Sonny she called him, but his real name

was Sonny she caned him, do not read was Michael Antony."

"Sonny or Micky," said my friend, "the name will be worth having on the bottom of a check some day soon. That little Irishman will make good! He's got grit!"

## ON WITH THE DANCE

(Continued from Page 15)

whirred off with a potent suggestion of pleasure ahead, while every one inside was

chattering at once.

"Oh, I never left any word for Preston in case he gets home before I do!" Elinor gasped once, to be reassured easily by

"If he's playing chess with Kelmer he won't be out until the last train anyway. We'll be home before he is."

The ballroom, when they reached it, was brilliant with many-colored lights and bannered trophies round the walls; the floor

nered trophies round the walls; the floor was fine; the music caught you up and bore you away with it. In every corner, on the edge of the expertly whirling dancers, were couples dauntlessly practicing steps.

Elinor had no lack of partners to encourage her pretty, graceful efforts; her little feet were untiring. If they did seem to flag for a moment the thought of how much Preston was enjoying his old chess lent fresh zest to the dance. She felt a growing strain of something a little hard in her—a consciousness of that beginning of separate intersciousness of that beginning of separate interests when neither has any uniting sympathy with the elected pleasure of the other.

Rex Courtney, a very good-looking young man—at one time the bachelor par excel-lence of the little married circle and back now for a visit after a long absence—com-plimented Elinor openly, with the privilege

plimented Elinor openly, with the privilege of an old friend.

"You just look sweet in this blue gown to-night, Mrs. Chandor; you haven't grown a day older since I saw you last! Let's have another turn. You'll be a great little dancer if you keep on!"

She felt, as she caught a glimpse of herself in a mirror, that she did look well. Yet, underneath all her gayety and that little feeling of defiance and resentment against Preston, she had a sensation of loneliness at Preston, she had a sensation of loneliness at Rex Courtney's words. She was used to the background of Preston's deeper interest; she wanted him to admire her.

She longed for an impossible story-book adventure, in which, by some romantic happening, he should have been lured over here on the clubhouse floor also, and they should meet in delighted astonishment. But there was no story-book adventure only the unpleasant one that when they left, much later than she wished, it was found that it had been snowing hard for some time.

The harrowing nature of that ride back blotted out all past enjoyment. The ma-chine clogged and stuck. The men, in dancing shoes and evening clothes under their long coats, worked to clear it, ankle-deep in snow; while the women inside shivered and lamented, Elinor a prey to

wild anxiety.

When Preston went into the sleeping, dimly lighted house and found her absent he would not know what on earth to make of it! He hated her to do things without letting him know explicitly; he had at all times a masculine feeling of responsibility for her welfare, and he would be furious if he found that she had been stuck in the snow during this storm under what he would, of course, consider incompetent direction.

Oh, dear! This marriage was a stupid, disabling sort of thing when it came to the pass that, if you could not have any real enjoyment in the companionship of your husband, you could not enjoy yourself without him either.

It was half past two when the limousine got across the track by the railroad station, its lights dimly showing through the whirl-ing snow. The last train had come in over an hour ago. A few minutes more and she was on her own steps, propelled by Donald's aid. He turned the key in the lock for her and helped her brush off the snow in the vestibule before running off.

The hous ight turned down low in the hall. Preston's 1at and coat were not there. Was it possiole he had not come in yet? She went ipstairs with a beating heart, calling softly ven before she turned on the light.
"Preston! Preston! Are you here?"

There was no answer. He was not there, the looked for a written message from Ellen, in case he had telephoned earlier; out there was none. After two o'clock and e not home yet! Had he gone out to look or her? But, of course, that was absurd.

She threw off her wraps, took off her vershoes and stood there irresolute, listenng. Perhaps after all he had fallen asleep n the sofa in the drawing room. She ran down and switched on all the electric lights, gazing about her fearfully in their brilliance.

The trains had been running all right-Rex Courtney had said so. As she stood here in her ball gown listening, with an eerie sensation, the color suddenly flamed into her face with relief—there was his step now, scrunching and slipping on the walk outside; and then here he was before her in his big overcoat, his dark eyes smiling

down at her.

"Hello!" he said in what seemed pleased surprise. "This is nice; I thought you'd have been in bed long ago. How fine you

look! What's up?"

"I've been over to the dance at the Ridge Clubhouse with the Bannards and the rest, in the Iversons' limousine. I thought you wouldn't mind."

"No; of course not," he answered.
"What makes you so late?"
"Why, to tell the truth, the evening passed so quickly that when I looked at my watch the last train had gone; so I came out by the tube and the trolley. Wait here a moment while I take a look at the furnace."

Elinor could hear him shaking and rattling away at it before coming up again to drop on the sofa beside her, his long legs stretched out before him. He was evidently tired, yet there was something un-usually alert in his expression, a light in the eyes he fixed on her that seemed to come from some pleased thought which gave a new outlook on the world. His wife, sitting there with her white neck and shoulders rising out of the blue chiffon folds, her round bare arms lying negligently in her lap, and the gauzy spangled ornament trem-bling in her brown hair, felt for him, in her turn, that suddenly quickening sense of admiration that puts new life into the apparent monotony of marriage; she had not

seen him look so young for a long time.

"Did you win this evening?" she asked.

"Win what? Oh, we only played one game; it was a draw. Kelmer's cousin, Mrs. Anderson—I've met her before; she lives in an apartment near him—called him up about half pust nine and asked him to bring some of his records over for her pho-nograph; so I went round there with him. They had some kind of an impromptu party on, we found when we got there. And whom do you think I met? I never got such a surprise in all my life!" He paused for emphasis. "Minnie Trip!"

"Minnie Trip? I don't seem to remember her," said Elinor blankly.

"Oh you you do! She was a girl I ment

her," said Elinor biankly.

"Oh, yes, you do! She was a girl I went
to school with when we lived near Minneapolis. I've spoken to you about her a hun-dred times. It must be twenty-five years since we've seen each other—she's been do-ing settlement work in Chicago. Well, she's just as little and roly-poly and red-haired and jolly as ever, with just the same dimples, and snap in her eyes—hasn't changed an atom. I said: 'Well, Min, it's good to see you! Do you remember how you used to boss me round and make me carry your books?' And she said indeed she did, and a lot of trouble I gave her too! Once she threw a rock at me and hit me in the eye because I tried to pull her curls. Oh, she was a case, I can tell you! Well, we had a good talk over old times. We were off in a corner by ourselves."

"That must have been very pleasant," said Elinor vaguely. It is difficult for even the most devoted wife to show real interest in her husband's schoolgirl friends. "Did you stay there the rest of the evening?"

Mr. Chandor nodded.

"Yes. They had some pretty good music—a lot of catchy tunes, with plenty of spring to 'em. I took down the names of some. I told Mrs. Anderson when I first went in to count me out of the dancing. ang -er-and wen: A smile of deeply interested reminiscence overspread his face. "Will you believe it?

The first thing I knew, Min said:
"'Stand right up on the floor, Preston Chandor, and put your feet the way I show you.' And before I could tell where I was she had me going off down the room with her. It was a Hesitation something or other—I don't know what you call it. There wasn't any hesitation about her, though! Min said I got it the first clip—no trouble at all! She kept me at it too."

"Did you try it with any one else?"

asked Elinor in an even tone.

"Oh, I tried a few things with a couple of other women. There seemed to be a

pretty nice set of fellows there; one of them belongs to the Ivonia Yacht Club. But they're all dance-mad, every one of them! I told them that, after trying it for the evening pretty thoroughly, it certainly didn't get me; I couldn't see anything in it at all!"

"Oh, Preston!" His wife's face, which had been grankling suddenly clouded over:

had been sparkling, suddenly clouded over;

her blue eyes became moist.
"Fact!" said Mr. Chandor. He pressed "Fact!" said Mr. Chandor. He pressed her hand tenderly; and, with the luminous expression still in his eyes, he rose and went over to the phonograph. "I'm dog-tired; but I was just wondering whether we haven't one of those records here. Hello! I thought so. That sounds all right, doesn't it? Want to try this a little with me before we go upstairs, dear? I may as well get the hang of that Maxixe—however you pronounce it—before I forget it. Wait untill push back the rug. Now!—— What on earth's making you laugh so?"

"Oh, Preston! You've got it at last!"

His face took on a reluctant, shamefaced grin as his arms, already round her, held her swaying form upright.

"Well, you certainly do look sweet tonight, Mrs. Chandor!" he said fondly.

The long-looked-for ball at the Watkins' The long-looked-for ball at the watkins home was in full progress. Everybody was, as usual, dancing differently to the same deliriously sweet strains; the long, loose-kneed Mr. Crandall and the elegant Mrs. Roberts seemed to be intermittently sinking to the floor, like Little Sally Waters; Donald Bannard, with little Miss Prankly waying lightly across one arm, cast off from swung lightly across one arm, cast off from his moorings and went with the tide; Pres-ton, linked to the solid yet aerial Mrs. Bantry by a finger tip, pranced gracefully along toward her with the expression and mien of a toreador as she whirled ever and anon just ahead of him; while Elinor, under the capable direction of Mr. Brentwood, forged unwaveringly in a straight line down the room. Occasionally the eyes of the husband and wife met in swift and happy accord. Theirs was the next turn together—the best Theirs was the next turn together—the best of all. Oh, there was joy in it! "Greatest twosome ever invented," said

"Greatest twosome ever invented," said Mr. Iverson, wiping his forehead under his white hair as he paused by kind, motherly Mrs. Brentwood, who never performed, but loved to see her husband do so. "This dancing craze seems to get hold of us all—even me, who ought to know better at my age. What do you suppose is the reason?" Mrs. Brentwood smiled.

"Dear me!" she remarked with apparent irrelevance. "How I longed to dance thirty years ago! And I didn't dare to acknowledge it because I was married and supposed to be beyond such frivolity. You see, so many times we grow old because

see, so many times we grow old because we're expected to do so. This, Mr. Iverson,

is just the natural upspringing of that which never dies out in us while we are alive—and that's youth!"

#### Planning for 2914

THOUSAND-YEAR museum, designed A to preserve exhibits so nearly perfect that they will not have changed in appearance when shown to Americans in 2914, is a recent addition to the American Museum of Natural History, in New York. Dust, light, insects and moisture are the constant light, insects and moisture are the constant enemies of museum exhibits; so special storage vaults have been built, which will keep all four under perfect control and in all probability preserve exhibits for one thousand years. The buildings are not ex-pected to last for anything like that length of time, but the system will do its work of preservation perfectly well until the time for new vaults comes along. Dust and light can new vaults comes along. Dust and light can be kept under control by constant atten-tion; so the real problems of ideal preservation are moisture and insects. The vaults have been built of concrete, with perfectly fitting air-tight metal doors, so that neither moisture nor insects can get in.

In the event, however, of insects getting in-when the vaults are visited, for instance-provision is made to kill them off by filling the vaults with some deadly gas

for a few hours occasionally.

Exhibits that are not very exciting now. but which will be genuine curiosities hundreds of years from now, are being storedsuch as Indian baskets, headdresses and weapons. Some of the buckskin articles may not last a thousand years, because the Indian tanners did not do sufficiently perfect work; but it is predicted that most of the relics will last that long in good shape.

# "It Took Us 70 Years to Make It"

You have smoked many tobaccos origi-

You have smoked many tobaccos originated by the Pattersons. You have found them good. Now, won't you try "Whip," our latest blend—our masterpiece—the culmination of 70 years' experience in blending smoking tobaccos?

We believe "Whip" is the best smoking tobacco ever blended. Fifty years ago my father introduced the mellon Barley leaf as a pipe tobacco. And it was we Pattersons that first produced smoking tobaccos without "the bite"—that first produced the ready-rolled style of tobacco now so popular.

of tobacco now so popular.
We believe that "Whip" is as notable
an achievement as any ever scored by the

an achievement as any ever scored by the Patterson family.

"Whip" is milder than any tobacco you ever smoked—so mild that you can smoke it all day and night—so fragrant and satisfying that you will want to keep your pipe going all the time—so bland and gentle that there is never a bite at your tongue or a tickle of your throat, no matter how much you smoke.

Ask your dealer for a one-ounce can of "Whip" at 5c., or a two-ounce can at 10c., and you can prove the wonderful smoking qualities of "Whip." It is also put up in handsome Pottery Patented Self-Moistening Pound Humidors.

Or you can place the burden of proof on me. Drop me a postcard, mention the name of your dealer and I'll send you an

#### OUNCE CAN FREE

It took the Pattersons 70 years to produce a tobacco like "Whip." So you would naturally expect "Whip" to possess improved smeking qualities. Try "Whip" and learn how enjoyable a pipe really is.

Also makers of "Queed"—the big 2% or 10: tin-a little stronger than "Whip" and a favorus with many particular smokers.

## *Barracks and Beggar*s

(Continued from Page 4)

An Italian puts it this way: "Knowing how Austria ruled this country, would you want her back here? Would you want France setting up one government at Naples and another at Milan?"

Well, decidedly you wouldn't. You'd muster the last peasant into the ranks and sell his last shirt for gunpowder before you would suffer it. You'd embrace "bank-ruptcy armed to the teeth" with both arms. And when you cross the border you find exactly the same attitude, only looking in a different direction.

The president of a flourishing French bank mentioned casually that his eldest son was about to begin two years' active service

in the army.
"Is it literally true," I asked, "that your son serves his two years exactly as a day-laborer's son does?"
"Exactly," he declared with emphasis.

"There is no escape from military service, and everybody serves exactly alike.

"But in the case of a man of means and influence," I persisted, "isn't there some way of getting his son off—hiring a substitute or something like that—or having him serve on easier conditions?"

"No, sir!" he declared with a touch of indignation. "Rich and poor, famous and unknown, they all serve exactly alike. If my son should evade his military service he would be disgraced. He couldn't belong to a decent club. He would be snubbed. Even if he were rejected on account of some physical defect it would be a humiliation to him. I served my time in the army, and I remember how nervous I was when I took the physical examination for fear they would find some flaw in me. If I had been rejected it would have been a lasting regret

"Two years out of the life of a youth just

"Two years out of the life of a youth just at college age must be something of a handicap," I suggested. "Can he continue his studies while serving?"

"No," said the banker. "They keep him pretty busy. He has little time for anything except his military duties. It makes him about two years late in entering professional or business life."

Remembering that a povice's military

Remembering that a novice's military duties consist largely in scrubbing up every-thing in sight, from the doorstep to the officers' boots, I ventured to ask: "And

you don't resent that? You don't wish it changed?"

"It is inevitable," the banker replied.
"Now the government has lengthened the term of active service to three years. I was in favor of that, and so, you will find, were a majority of Frenchmen. Look at what they are doing in Germany, with their new regiments and this extraordinary war tax. If they arm, we must arm. It is the price of our life. France could not endure another Sedan. Germany hates us as much as ever. To disarm would be to commit suicide.

France would become a mere pawn in a game played by the armed powers."

And—while in France—that looks rather convincing too. Only forty-three years ago the Prussians held Paris and exacted a war indemnity of a billion dollars.

#### Getting Acquainted in the Army

Nearly all Frenchmen talk the same way A great many of them, in fact, defend military service on its own account. The phys-ical training, they say, is very valuable, conducing materially to the nation's health and stamina. You can spot a man who has served in the army by his erect bearing, forward-looking eyes and firm step, they tell you. And if you go out to Versailles when they are breaking in recruits you will see that they do get good bodily exercise. But if your son, aged twenty, should announce that he proposed to devote the next two years of his life to physical exercise, you would probably yearn to engage in a few physical exercises yourself, with himself as the object thereof.

Military service is warmly defended also on social grounds. The head of a large French business, who has traveled in the

United States, observed:

'I can understand how the idea of having a son serve in the army would strike an American, for your army is wholly undemocratic, while our citizen armies are the most democratic institutions in the world. Everybody goes into them on an equal footing. One result is that we Frenchmen know one another in a way that you Americans

and the English never do. In New York you see a roustabout, a cab driver, a street cleaner, and you really don't know that man at all. You don't know his points of view; how he thinks about things; what his experiences have been. If you had served two years in the army with him you would know him and he would know you.
On the boulevards, not a great way from
here, you may see a shabby man selling
newspapers. I see him every now and then.
That man and I served side by side years
ago. I know him; he knows me."

The speaker was bearing with earthusi.

The speaker was beaming with enthusiasm by that time, and I acknowledged that to know one's fellow men is certainly a good thing. But I went away with some mental reservations. Thereafter I noticed particu-larly quite a number of shabby, middle-aged men who were selling papers on the boule-vards, and I wondered what particular advantage they might derive from "knowadvantage they might derive from "knowing" various well-placed, prosperous gentlemen like my acquaintance. I could easily
imagine the advantage to the prosperous
gentleman. Coming out of his office in
correct clothes and polished boots, and stepping into a cab that was going to take
him home to a good dinner, he might well
derive a distinct pleasure from recognizing
with an affable nod and smile his former with an affable nod and smile his former companion-in-arms. But as the former companion-in-arms shuffled off to his kennel to gnaw a crust, what particular advantage was there to him? And as to mutual understanding—after many years during which the one has been going in cabs to good dinners and the other gnawing crusts in a kennel—I was dubious about that also.

#### Military Service Popular in France

Finally military service is defended all over Europe on moral grounds. At least a dozen men, first and last, emphasized the point that it taught obedience to author-ity; or, as one of them more accurately put it, "It teaches people that some must com-mand and some must obey." Probably mand and some must obey." Probably that is a grand lesson—and immensely important from the point of view of those who are so fortunately situated that in the na-ture of the case they will be doing the commanding rather than the obeying. I haven't the least doubt that this aspect of the case powerfully commends universal military service to the well-placed and well-to-do. That universal military service gives employers a great leverage upon some classes of labor was well illustrated in France when the government crushed a railroad strike summoning the strikers to serve as

From whatever motives, nearly everybody seems in favor of the military sys-tem—when it comes to a real test. At the last French elections, in April, the former premier, who was responsible for lengthening the term of active military service from two years to three, was returned to the Chamber by an overwhelming majority and the whole program of increased taxation was indorsed.

Taxes are not trifling now. On army and navy France spends nearly three hundred million dollars a year, while interest on the colossal public debt—mainly a heritage of wars waged in the last hundred years—con-sumes two hundred and fifty million dollars more. In other words, with forty per cent of our population and about that proportion of our wealth, France has to spend more than half a billion dollars a year before she gets round to any really useful

objects of expenditure.

But nobody except the Socialists really objects. They say France must keep more than six hundred thousand men under arms at all times and maintain a fleet of thirty battleships and thirty-two cruisers in order to preserve her national existence; that to disarm would be to commit suicide. Just as Italy points to Austria and France as a compelling reason for bankrupting herself with armaments, so France points to Germany.

"If you want to know how the French people feel about it," a Parisian observed, "just stroll over to the Place de la Concorde and glance at the statue of Strassburg.

Of course I had glanced at it. Round the splendid square are eight great statues in honor of important French cities. The Strassburg statue is half buried under garlands and mourning streamers, and has been ever since Prussia took the city away from

"But why not stroll a little farther," I objected, "and glance at the Arc de Tri-omphe or the Vendôme Column, by which Napoleon commemorated the pleasant fact that he had licked the Prussians out of their boots? Where are you going to stop?"
You find, in fact, that all this arming of

nation against nation has its virile root in the hatreds begotten of past wars. France thirsts to avenge her defeat at the hands of the Prussians two score years ago. Just as reasonably Prussia, then, might have been thirsting to avenge her equally crushing de-feat at the hands of the French three score years earlier. Italy must keep armed to the teeth lest Austria avenge her defeats of the

teeth lest Austria avenge her defents of the middle of the nineteenth century; and if you go back a little way Austria owes a thrashing to every nation in Europe.

In Berlin I was bidden to trot back to Paris and take another look at that Strassburg statue. Germans point to its perennial heap of garlands as proof of France's hatred for the Fatherland.

"Turn to the map and see our position," said a Berliner. "There is France on one side, Austria and Russia on another, and England across a hand's breadth of salt water which her ships command—and all of them lemon-color with hatred of Ger-

water which her ships command—and all
of them lemon-color with hatred of Germany. Do you think for an instant that we
could disarm or dishand a single regiment?"
So I found it everywhere—always not
only a convincing but an absolutely invincible reason for mustering in the last
man and spending the last dollar. Comparatively few Americans I am estisfied undertively few Americans, I am satisfied, understand the feeling over there. To most of us their furious competition in armaments, adding regiment to regiment and piling tax on tax until peace has become far more costly than war formerly was, seems ridic-ulous or a bit insane. We are apt to think of it as something hatched in chancelleries

of it as something hatched in chancelleries and imposed upon reluctant people. But there is no doubt that a great part of the people themselves are in favor of it.

The only important opposition anywhere comes from the Socialists, and I doubt whether Socialist opposition goes much below the surface. For example, Germany last year had eight hundred thousand men under arms and a fleet second only to that of England, with forty-one battleships of England, with forty-one battleships afloat or building and fifty-two cruisers, and was spending on army and navy about two hundred and fifty million dollars a year. The emperor then proposed to increase the peace footing of the army by a hundred and thirty-six thousand men, and to raise a

special military contribution of two hundred and forty million dollars.

Now anti-militarism is a cardinal tenet in the Socialist creed. The party has one hundred and ten members in the Reichstag out of a total of three hundred and ninetyseven members. Its members had always voted against taxes for military purposes, But on this proposal, which one of the Socialist members described as "the most monstrous military hill that a government ever dared offer a country," they voted unanimously for the government.

#### The Zabern Incident

To be sure, they insisted that the proposal to increase the army and the proposal to raise a huge fund to pay for that increase and for other military purposes be put in separate bills. Excepting themselves, everybody was in favor of increasing the army, so that bill passed without their vote. Then they voted unanimously for the second bill, which made the first effective.

which made the first effective.

It is also true that they got the second bill so drafted that the huge special contribution would fall mostly—in theory at least—upon the rich and well-to-do. Their argument was that the increase in the army and the special levy were bound to pass anyway, so the best practical thing they could do was to throw the financial burden on the bourgeoisie.

But there was probably another and many

But there was probably another and more compelling reason. The Socialists poll some four million votes, but the outright memfish party number less than a million.

voting strength comes from not members of the party ticket out of sympathy for jects and because it is the position party in Germany, ons of sympathizers - the limio whose sympathies nobody are often small tradesmen, pro-al men, clerks and the like. There is probability that the Socialists voted the Kniser's proposal in deference to the entiments of these sympathizers. In fine,

when it comes to a real test no part Germany stands unflinchingly aga militarism; and the action of the Socia on last summer's military bills is as goo indication of public opinion among the fortunate mass of the people as anyt I know of.

A few months later Germany was m A few months later Germany was a agitated—for a fortnight—over the Zaincident. Military officers stationed in town of the conquered French provsuperseded civil authority and behaved very high-handed, not to say outrage manner toward some civilians. There manner toward some civilians. There a good deal of angry talk in the newspa about military despotism and saber. The Reichstag, by a decisive majo passed a vote of censure on the impehancellor, which in England or Fraudd have brought an immediate dow of the minister. of the ministry. English and American newspapers sa

discussed forthcoming changes of a por tous nature in the German constitu

with the emperor reduced to a mere s
leader, like the British king.

But the emperor simply shrugged
shoulders. When I was in Berlin suffitime had elapsed for a sober second thou
and every well-informed man with whtalked assured me that as a net result o
Zabern incident the government—w
means the Kuiger—was stronger than. Zabern incident the government—w means the Kaiser—was stronger than a And a little later, when Russia ado measures that will work out an increa-her peace strength by four hundred t sand men, the Kaiser could have had thing he wanted—that is, in the conting that there is anything he wants in the j ical way which he doesn't have now.

#### The German Income Tax

Those Russian proposals sent a through Germany which was percep even to a foreigner. Men talked of not the way we talk of it here as somet not the way we talk of it here as somet very remote and conjectural, but as a t of deadly imminence. Americans this war about twice in a decade, and then no very keen interest. In Europe think of it all the time. It is so much it air that Americans need live in any F pean country only a short time to get systems thoroughly impregnated wit I talked with a good many Americans who have resided in Europe for some than found them, to a man, as much

and found them, to a man, as much mitted to the militarist program as natives are—and always from the poi view of the country in which they are d ciled. The American living in London the vital necessity to England of main ing as many warships as any other nations. Otherwise France and Russ Germany and Italy might shut off her supplies, starve her into submission month, and walk off with all her colc The American in Paris sees that a disar France would immediately sink to insi France would immediately sink to insi-cance among the nations, with a ro-Europe about like that of Venezuel America. In Rome he sees that Au-would reimpose her detestable rule the country, or Austria and France u-divide it up, if Italy relaxed her mil-preparedness. In Berlin he sees Russia; ing a horde of Cossacks across the tier, unless the Kaiser has a very v-welcome prepared for them, or En-gobbling up German East Africa. For each particular country there

gobbling up German East Africa.

For each particular country there cogent reason why it must not let up i competition of regiments and dreadnou. The people of that country believe i vote for it and pay for it. Probably is no better test of a man's belief in a than the cheerfulness with which he pay for it, and in that respect the Ka extraordinary military contribution broomt some interesting evidence.

Taxes in Germany were already he The Prussian income tax, for example gins with what would be considered a laborer's income in this country, with

aborer's income in this country, wit increased percentage as the income If a man's income is fifteen hundred lars a year his state tax on it is the same that a married man dollars eight thousand dollars a year would under our new Federal income-tax With an income of twenty-five hur dollars the Prussian pays seventy-five lars a year to the state. But the cities derive a substantial part of their rev from income tax, by levying a certain cent of the state tax. of twenty-five hundred dollars would pay a total income tax of about one hundred and fifty dollars.

Now the special military contribution in-cluded, not only a tax on principal, but a supertax on incomes above twelve hundred and fifty dollars a year. Calculating on income-tax returns and other data, the government estimated that the total contribution would reach two hundred and forty million dollars, and in order to induce patriotic citizens to disclose their full incomes the government announced that if any citizen's return for the extraordinary contribu-tion showed a larger income than he had been reporting for the normal income tax the discrepancy would be forgiven him; the government would neither prosecute him for having failed to disclose his full income nor attempt to collect arrears.

The result was that the first installment of the extraordinary contribution, which was expected to yield only a third of the total, yielded nearly two-thirds as much as the government had calculated upon getting from all three installments. It is true that immunity was offered for tax-dodging sins of the past, yet the citizen who disclosed a larger income than he had been paying taxes upon certainly knew that he would be obliged in the future to pay the regular tax on the full income, so it stands as an example of the German's willingness to foot the military bill.

The German business man speaks of his war taxes as insurance—that is, he regards the tax receipt as a policy of insurance that for another twelve months no British cruiser will shoot the roof off his warehouse.

As in every country where military service is universal and compulsory, its physi-cal benefits are much extolled.

But the death rate in Germany, France and Italy, where military service is universal, is considerably higher than in England, Wales, Scotland and the registration area of the United States, where, comparatively

speaking, there is no military service.

The alleged physical benefits, however, are one of the mainstays of the militarist system. This spring a large and distin-guished delegation waited upon the prime minister of England to urge the adoption in that country of compulsory military service on the Continental plan. Here are some of the arguments presented, as reported in the London Times:

#### Militarism In England

A manufacturer: "As the senior working partner in a firm employing over nine thou-sand men and boys, he believed that univer-sal military training would not disorganize business, though it would of course entail reorganization. Any inconvenience during the period of reorganization would not last more than one or two years and would be amply and permanently compensated for by

the improved physical condition and general well-being of the employees."

Sir James Crichton-Browne: "National service is now absolutely necessary to com-plete our educational system and to insure the freedom of the next generation from many crippling blemishes and defects. Military drill and discipline during adolescence would enlarge the mental caliber of the nation."

The Dean of Durham: "While visiting America he had heard again and again that the young Englishman was conspicuous among immigrants for his helplessness be-fore the novel and bewildering conditions of American life. He could not but connect that fact with the significant circumstance that of all Europeans entering America probably the young Englishman was the only one who had never passed through sys-tematic military training."

It is not difficult to read between the

lines here. Military service is necessary because of the physical benefits which will flow from it; also as a powerful deterrent to various social aberrations, such as strikes and unearned-increment taxes, which are naturally distressing to elderly gentlemen in possession of pleasant jobs and comfortable

This English case illuminates the whole subject. A few days after the delegation waited upon the prime minister the government's supplementary naval estimates were presented to the House of Commons. They brought the navy bill for the year up to two hundred and fifty million dollars. The bill has been rapidly increasing year by year. Great Britain now has seventy-two battleships and one hundred and thirty-two

DI

cruisers affoat or building, a fleet superior to those of any other two European powers. That has been the safety mark for Eng-land—a fleet equal to any other two. But of late distinguished military men, headed by Lord Roberts, have discovered that this great fleet is little better than a broken reed to lean upon unless it is complemented by a large, well-drilled standing army. Otherwise, what would happen? Why, in case of a war with Germany the fleet might sink the Kaiser's dreadnoughts, but there England's military power would stop. She would be in the humiliating position of a dog that has treed a cat and can only sit

at the foot of the tree and bark.

So everywhere the military argument proceeds in a circle, or rather in an ascending spiral. The emperor calls upon Germany to increase the peace footing by a hundred and thirty thousand men and to raise an extraordinary war fund of two hundred and forty million dollars by a supreme effort, in order that the national existence of the Fatherland may be finally assured. Within a short time Russia brings forward plans to increase the peace footing by four hundred thousand men, involving an extraordinary expenditure of one hundred and fifty-five million dollars, France lengthens the term of active military service by half. So Germany's relative position is what it was before the supreme effort was made.

There was an unusual spectacle in Stock-holm last February. Over thirty thousand Swedish peasants from all parts of the Swedish peasants from all parts of the kingdom met at the outskirts of the city, marched through the streets to the royal palace and petitioned the king to increase the army. They were nearly all small farmers; some of them had traveled upward of seven hundred miles; they wore their best clothes and carried various emblems of their districts. They are the men who will do the actual fighting if there is war, and mostly foot the bill; yet this seems to have been a voluntary, spontaneous demonstration truly reflecting the wish ous demonstration truly reflecting the wish of the mass of the people.

#### The Ever - Ascending Spiral

And it is very easy to understand that wish. The demonstration was inspired by news that Russia had been massing troops in Finland almost within gunshot of the Swedish border. Within a few years these Swedish peasants have seen the savage and bloody rule of the Czar extended like a plague over Finland, blotting out every par-ticle of political liberty. If I were a Swedish peasant in like circumstances I should at least send the hired man to the colors.

So in any particular country you can find a convincing reason for that country's find a convincing reason for that country's militarism. A great majority of the people of Europe, looking at it from their own particular national angle, do see convincing reasons for it. Broadly speaking, it is only when you look at the whole thing across the Atlantic that you see its colossal folly. For the motives upon which militarism rests are no longer valid. Time and progress have made them as hollow as a wormrests are no longer valid. Time and prog-ress have made them as hollow as a worm-eaten nut, as bogus as a china egg. No enlightened nation any longer can gain any-thing by conquering another nation. It is demonstrable that war among civilized nations is an enterprise in which every participant is bound to lose. There is no territory in the world whose conquest by an enlightened nation would repay the cost; because among enlightened nations every country belongs to the people who inhabit it.

Imagine that Germany had conquered Canada. What could she do with it? There would be no confiscation of private property. All the resources of the Domin-ion would still belong to the inhabitants,

just as at present.
Russia, having a barbarous government, might gain something by conquest, but no enlightened nation can. The enlightened nations recognize this by implication, because they one and all avow that their armaments are solely for purposes of national defense and not for aggression. In fine, Jones, who abhors fires, pays a third of his income to insure that Robinson will not burn down his barn, while Robinson, who wouldn's touch a match to the ird of his income to insure that hurn down his

# The Gay and Festive Claverhouse—An Extravaganza

LAVERHOUSE was just as wicked, and extravagant, and unprincipled, and good-looking, and altogether delightful as he could be. Everybody execrated and blackguarded and loved him. He was a sort of reprehensible but genial cyclone let loose in good society. He was all things that he shouldn't have been—at once the joy and the curse of his intimates. Rich, handsome, two doors from a title and unmarried. Black-haired, gray-eyed, large and a linguist. Idle, worthless and a popular parti. There you have our hero en silhouette, as the world in general knew him. As he knew himself was another matter. Very possibly very much another matter. Scientists have not yet settled whether a man be more responsible for being than for having; more culpable as to stealing than ss to curly hair; more praiseworthy as to poetry than as to princely blood.

It happened-just accidentally fell out - that Claverhouse, the Honorable Ernest Claverhouse, to give him his full title, was born with no sense of responsibility toward anything or anybody. There lay the key to all his character. He never was able to comprehend a social ≠andard that included the rights R pleasure of any other than simself. Nothing in him made ilm try to attain to the possesion of such a comprehension, or it never struck him as in the east needful. Successive nurses, overnesses, tutors and teachers sbored hard to instil the missng quality, but they never suceeded in the least. Neither the sot idea nor the soil necessary its growth existed. Their harge grew up just as he had st out, and lived for himself one, a creature as free from I moral pullbacks as any wren elephant that was ever alive. At thirty he had a goodly

treer behind him and was still lite calm as to slashing along thlessly. Then one fine day he fell ill, and was very ill. Fancy then if you can the elings of the famous specialist who attended him, when that same pompous and inderous practitioner decided that the only course open to him was to tell the goodmpered — I said, did I not, that he was riotously good-tempered?—young reprobate at he must die!

They were in the luxurious quarters occupied by the young man, and the young man mself was sitting up in bed, ghastly white, and with horrid sharp lines round his eyes d mouth. The room was well done in mahogany and yellow, and the specialist matched e room to a nicety. He sat on a chair and the nurse stood at the other side of the bed. mrad, Claverhouse's cosmopolitan valet, waited in the dressing room beyond, and it is three o'clock in the afternoon of a late August day. The doctor was very quiet

By Anne Warner ILLUSTRATED BY CLARENCE F. UNDERWOOD GARANEE LIVERDARE

"I Might Just Suggest, Miss, the Sending Out of a Cup of Tea to Poor Mrs. Watson"

and made the hard statement both kindly and carefully. He watched the effect with great

Claverhouse didn't say anything at first, turning his hands up and scrutinizing the palms meticulously, and then arranging his sheet very neatly and precisely in one long, even fold across the bed.

"We all have to face many hard facts in life," the doctor

Claverhouse examined the euffs of his pajamas and straightened the underarm seam of each

"Life is full of hard facts," went on the sitter at the bedside.

The invalid tipped his head round and looked at him. "You don't mean it really?" he said with great interest. "How did you ever find that out?"

The doctor did not color, but the outer end of one of his eyebrows just twitched a bit, for really he wanted to feel sympathy for an earl's nephew.

"And how soon may I expect my happy release?" the patient continued, evidently feeling that the burden of keeping up the conversation was now passed

The doctor bit his lip.

"You don't expect me to be absolutely careless as to such a trifling detail of my future, do you?" the young man went on. "It will be convenient for me to make a few plans. I usually go to Scotland for the shooting; but if I'm going to die first of course I'll give up going."

As this was latter August the famous specialist felt quite sure as to the shooting, but he felt equally sure that the man sitting up in bed would not be on his feet to shoot.

"As to plans, if you take the greatest of care, the greatest of care, observe," he said with precision of word and emphasis, "I can promise you"-he paused and considered-"perhaps six months." It was in this way

that one of the greatest of modern medical men hoped possibly to frighten the gay and festive Claverhouse into a few stray bits of prudence. He looked away as he spoke, but having spoken he returned his eyes to the field of war, and was more than a little depressed to note that the doomed man was looking for his cigarette case. Abstinence from cigarettes was one of the chiefest of the modes of prudence enjoined.

"Have one?" asked Claverhouse, swooping toward the case, which rested on a table by his side. The swoop was also a part of the forbidden, and the medical man was subjected to further mental anguish in being forced to witness it.

"No, thanks," he responded briefly.

Claverhouse lit a cigarette and leaned back, puffing gently. "Six months, eh?" murmured, as if striving to impress the fact on his memory. "Six months, and

August-September, October, and so forth, clear through to spring. If I take care?"
"That's where it is, you see."

"Hm!"

There was a silence. The nurse walked into the next room and returned with a vase of trailing vines which she placed on a cabinet in the corner. The cabinet looked

Chippendale and was a cooler holding iced wines.
"Perhaps you'll have a drink?" the ill man asked suddenly. The doctor started slightly and shook his head.

"Now I put it to you ---- " posed Claverhouse, reaching for his monocle and applying it with great precision. "Now I put it to you, supposing I don't take care, eh?"

The doctor was quite prepared for that, considering as he did that such would be the likeliest course of both patient and malady.

"Any day," he said gravely. "Any day."

"Any day?" "Any day."

"And what," asked the man in bed, carefully folding his arms and grinning pleasantly, "what might you call taking care now?

This had all been explained, not once but several times; yet the doctor was patient. "Abstention from stimulants and excitement of all kinds," he repeated slowly.

Claverhouse nodded. "I quite understand. I quite understand." He dropped his chin and considered. Then he threw up his head, took the cigarette from between his lips, pitched the ash off upon the rug and smiled. "And so, if that's all, I think I needn't trouble you further. I mean, you know, you can go.'

The famous specialist was totally unprepared for that; even though he did suppose that he, in common with all the rest of their little world, did know the man before him. But professional dignity is in itself a science, and his was well-grounded. He arose at once and his face expressed

"Shall I make a report to his lordship?" he asked. They both knew that he would have to so report, but he asked as

a matter of departing courtesy.
"What for?" snapped Claverhouse.

"It—it is customary."
"I don't come next," snarled the patient, replacing his cigarette between his lips and grabbing up the morning papers. "Report to Vivian Beck, if you feel so inclined."
"Do you desire that I make a report to any one else?"

"I don't care what you do from now on," concluded Claverhouse, turning his back and opening a paper. "Suit yourself."

It may have been surmised that those about the Honorable Ernest must often have writhed in the effort to control their tempers.

The gentleman now leaving the room did not exactly writhe, but he had great difficulty in speaking quite calmly when he came to the door.

"I trust," he said, pausing there, "that you will make every effort toward a temperate -

And then he was startled indeed. For Claverhouse, slamming over in bed, his eyes flashing, cried:
"Get out! Get out! Don't bore me any more!"

And then, flinging his arms across his eyes, he lay quite still and silent, while the doctor, offended mortally, stalked out.

WHEN he was gone and all doors had closed behind him, the man on the bed uncovered his eyes and said to the flushed nurse who stood now by the window, having returned from administering to the specialist such stray bits of attentiveness as she felt survive within her after the last scene: "You leave the room, too, at once."

She went out again at that and Claverhouse called loudly for his valet, who came directly and stood by the bedside, smiling cheerfully.

"Conrad, you're the one joy of my existence."
"Yes, sir. Thank you, sir."

"You heard all that old idiot said?"

"Yes, sir."

"All that tommyrot about my having to die?"

"Yes, sir." Claverhouse lifted up his eyes-lovely Scotch-Irish eyes they were, with long lashes striping their dangerous attractiveness-and gave a glance full of meaning into those other eyes meeting his, those good brown eyes of slavish and

"Conrad, my lad, we've no secrets from each other. I don't know whether I'm going to die or not; but so far as actually dying by itself is concerned, I don't give a damn. I've lived in lots of countries and I don't mind trying a new one any time. But"-he stopped, and then went on impressively-"there's one little matter that I want to set straight before I go, if I really must go, and that's a bit of work that will require a deal of planning. You'll have to help me; and the only way that you can help me is to do just what I've to do myself-launch out into the deep water and then go it blind and follow your own inclinations. I've been thinking for some time that something must be done, and since that old fool began talking I've been arranging what to do. You know me well, and you know

Would be His Successor

the thought and care which I give to each detail of my life. I've given the same thought and care to this matter. I know just what I mean to do. I'd tell you the whole of it if I thought it would do any good; but it wouldn't. All that you need to know you'll know in good time, depend upon it. As for the rest, just remember that if I should let you into the whole secret you'd be bound to hash the game; and the game in this case is one that can't be hashed. It's one that at all odds must be put through successfully. Do you understand?"

The valet looked anything but understanding; but, as that was the look which his master liked to see him wearing and which he accordingly wore the most of the time, it really didn't count for much.

"I'll do my best, sir," he pledged himself cheerfully;

and Claverhouse was satisfied.

"I'll warrant that you will," he said, reaching for another of the forbidden cigarettes. "And now first of all I'll tell you what I want you to do. I want you to go and try to get hold of Captain Beck. I must see him as soon as I can. Do you think you can find him this afternoon and get him here?"

"I'll try very hard, sir."

"Good! And if you succeed, if he comes here, while he's here you'll take a taxi to Portland Place, to Wythe House. I'll have a note ready for Miss Wythe. I'll hand it to you when you show Beck in. If she's at home—and she will be, for we're all up in town for the same reason: to see whether I'm to live or die, you know-you'll give her the note, and she'll read it; and then I'm fairly certain that she and her maid will return here with you. You'll show them up. It's all part of my plan, and as I've always been a lucky dog I think that I can work the whole game through to a finish.

Conrad went.

Then the nurse came back into the room.

"I shan't need you for the rest of the afternoon," Claverhouse said in an incisive tone; "and I think that really I shall not need you at all any more. My man is much more useful to me. You can pack up and I'll write you a check for whatever I owe you. Fetch me my checkbook!"

The nurse, open-eyed and open-mouthed, shivered and obeyed. She was too glad to get away to cavil at being dismissed, however, as her main duty had been playing cards from midnight on when her patient couldn't sleep.

When the check was written Claverhouse smiled and looked about the room in an extremely pleasant manner.

"Now let me see if there's anything I want before you go! The doctor said that I must not drink; so put the whisky and soda by me. And-ah, yes-my portfolio. I think that's all. Good-by!"

The nurse said good-by and went out. Of course the remained in the hall until she saw the valet returning but Claverhouse did not know it.

He wrote his note; and then he smoked and read, well pleased with himself.

"I don't wonder that Madeleine worships me," he reflected, as he poured out a stiff drink. "I'm such a change from the ordinary mortal. But she mustn't low me any more."

He finished the drink and poured out a second. "No, no; she mustn't love me any more." He finished the second and poured out a third.

"Curious creatures, girls," he observed, as he unfolded another newspaper. "But then I'm curious too. The thing is to -

He ceased to think, becoming interested in his reading just there. III

WHEN Conrad returned to say Captain Beck was coming immediately Claverhouse flung down his paper and looked really very well pleased.

"And here's the note," he said, shying it across the bed

"All written and ready and waiting, you see."

Conrad picked it up and asked if there was not some thing he could do for his master in preparation for the

captain's visit. "Oh, I don't know," said Claverhouse, reaching for the eternal cigarette. "Twist the chair round a bit perhapsthere, like that. I fancy there's nothing else. And now, as soon as he's here go on with that note at once. Don't lose any time, for there won't be any time to lose." And then laughing in a good-looking, easy-going, riotous way that was all his own, he added: "I ought to have been a writer for the stage. I calculate my exits and entrances so prettily. 'Beck, left bedside front. Conrad, exit rear door right.' But I'll tell you one thing you can do before running along; and that is you might-I don't ask it, but you might-just fetch another bottle of whisky and a fresh

awful thirst." Conrad looked a little bothered, but only a little, and fetched the whisky.

siphon, for the doctor's prohibition has given me a most

"And do not ever forget or let me forget that I am to give up smoking," Claverhouse added, reaching for the matches now. "And, therefore, while you're out buy another dozen boxes of cigarettes."

Conrad bowed; and just at that instant Vivian Beck rapped at the door. The valet hastened to open to him. Then the cousin, who stood between Claverhouse and the gray-haired and tottering title of their uncle, the earl, stood also between him and his sitting-room door-atal. handsome, indignant and protesting image; for Vivian Beck bitterly hated the man who would be his successor if he himself never had a son; hated him with all the intensity which may be postulated for a decent man who sees in a thorough-paced good-for-nothing the rival beloved of the girl whom he desires to marry. Vivian Beck loathed and despised his cousin as much as he hated him. He regarded him as unworthy the company of gentlemen. He new met him when he could avoid it; but he had come to-day. because the message had run that Claverhouse must de and that he desired to see him.

He stood now halfway between the bed and the dear. more than a little startled at the cigarette and the siphes. the smile and the gesture.

"You don't look as though you were dying," Vivian Beck's face said for him; and Claverhouse, understanding perfectly, replied aloud with: "Too bad, isn't it?"

Captain Beck frowned and advanced a little.

"No, I won't shake hands," said Claverhouse, with a tig of his head forward; "for I abominate you worse that poison and know that you reciprocate. But sit!" He pointed to the conveniently placed chair and tossed cigarette-case to that side of the bed.

"I didn't fancy coming," said Beck, standing wo straight and looking extremely forbidding: "but your se put it up to me rather strongly. Said you were IL == repeated the doctor's opinion and all that."

You may as well sit down," Clavernouse ins leaning back and arranging the sheet fold with his acco tomed precision. "I won't kill you, you know," he woon, lifting his brows whimsically. "Nor yet attack you I prefer not to shake hands with you; but still I have \*\* for you to do you a kindness. Won't you really sit down You can go, Conrad."

Conrad left the room.

"I'll stand, if you don't mind," said Beck, folding

arms. "I prefer standing."

"As you please," Claverhouse acceded. "Perhapought to stand, too, for I'm not overfond of you. 25 i already implied. But I can't stand unfortunately too beastly ill. So we'll meet on a half-and-half has Which reminds me: won't you have a whisky and sola

"No, thanks," declined the captain. "But go on now. What do you want with me? You're seedy and have sent, and I want to know why."

Claverhouse, who never under any circumstances put himself out for any one, and whose main joy lay in the ingenuity with which he could torment, now poured himself out a glass of Scotch, diluted it from the siphon and drank it deliberately.

"Curious that she wouldn't have you," he said as he set the glass down; "isn't it now? Especially when you and I both know whom she would have and why she can't have him." Then he looked earnestly into his empty glass.

The blood mounted to Beck's face until his blond hair and mustaches appeared white against its crimson. The veins swelled high in his temples and the cords stood out in his neck. He was obviously furious. And his cousin was looking at him and noting every sign of his emotion.

looking at him and noting every sign of his emotion.

"I'd like to love like that," Claverhouse commented slowly: "but I never could. It isn't in me. I never felt anything take possession of me yet. I've never met anybody or anything that struck me as worth getting red about."

Beck said nothing, but bit his lip and slowly paled again. Claverhouse reached for his cigarette case.

A wax match flamed, and he filled his lungs with the ragrant smoke of the rolled tobacco. "And now, Vyvie," eaning back again and arranging the bedclothes about him arefully, "before I forget it let me ask you a question: Do you remember the old place, Yewstones, that old, old nanor of our respected ancestors? The house where we used to have the larks when we were boys? How long since you've been there?"

Captain Beck said nothing.

"Is it empty or rented or what?"
Captain Beck shook his head.

"I've a reason for wanting to know. I've a good reaon. I've been thinking of the house this whole afternoon.

ou surely remember those walls and the paneled rooms. We used drive the servants out of their eads, I recollect."

"Of course I remember the lace," the captain said then. It's closed years since, I fancy."

"Know nothing of its present ate?"

"Nothing."

"Nothing whatever?"

Beck moved to the chair and it down. The conversation comised to be prolonged.

"Yewstones is vacant," he reirned in an expressionless voice. It's been vacant for some time, believe that our uncle keeps a an and his wife in the lodge, to sen windows and build fires. I m't know that they do, however, id I know nothing else as to any

"You don't know whether it's bitable?"

"I said I knew nothing else, thing else whatever."

Claverhouse turned upon his llows.

"I'm going to give you a shock," said presently. "It will be etty difficult for you to bear it. s this: I've sent for Madeleine come here to see me. I have a tle scheme. It's quite a difficult atter, but I think it can be put rough. When she comes I want u to go in there and listen." pointed to the next room. 'hat's part of your work—to sit there."

"I'll do nothing of the kind," d Captain Beck indignantly. have no desire to play eavespper."

He sounded unpleasantly ighty and scornful.

Claverhouse poured himself out other peg. "You know you be pig-headed if you choose," said, stopping between swals to speak over the rim of his sa. "If I'd cut out drinking I smoking I could live long ugh to ruin all our lives. But k at me; I ruin no one. I am ng right on killing myself. It ildn't be playing the game for to live now."

Rot!" muttered Beck with

"Well, if you think so," said his cousin agreeably. "But don't speak in that tone again, for it goes near to making me angry. And if I fly into a rage I'm liable to drop dead. And if I drop dead, as things are now she'll worship me to the last day she lives. You know that as well as I do. Girls are like that."

Beck drew a very deep breath. "What do you want with her?" he asked sharply.

"I want to take her into my confidence," said Claverhouse, putting down his empty glass. "And I want to prove to you beyond the shadow of a doubt that I'm an upright and honorable man. The only way to make that clear is to let you hear Madeleine and me talk together. I give you the chance. You can take it or leave it. There's the room. Go in and listen; and maybe some time you will follow up the advantage it will give you by going in and winning.

"If you don't want to listen you can go out the other door at any minute. I'll never know how long you stayed. Suit yourself."

"Has Madeleine Wythe actually consented to come here to your rooms? or are you merely asking her to do so?" Vivian Beck demanded.

"She is coming with her maid and my valet."

"You're a blackguard, Claverhouse, to let her do such a thing."

"The leopard can't change his spots," returned the ill man calmly enough; "but we won't argue. I know what I'm about."

There was a short, pregnant silence; and then the captain suddenly rose and stalked through the door which Claverhouse had indicated.

"Better take some cigarettes with you," his cousin called after him; but the only response was a violently banged door.

Then Claverhouse shook the ash from his own cigarette and turned again to his newspapers. "That's one reason

why really decent fellows have such a hard time in this world," he observed cryptically to himself as he hunted for an article of interest: "they're made the way he is."

IV

A FEW minutes later Conrad returned from his second voyage of good or evil omen.

"Well?" queried his master, looking over the paper.

"Miss Wythe and the housekeeper, Mrs. Wilson, are here, sir."

Claverhouse smiled joyously. "Good. Bring Miss Wythe in at once and give Mrs. Wilson a chair in the sitting room where she can look out of the window. . . . And Conrad ——"

"Yes, sir."

"Keep watch." Claverhouse indicated the inner room and raised his eyebrows. "Keep a good watch!"

"Yes, sir.'

"But don't ever tell me what you see, unless I expressly ask. Mind that."

"Yes, sir." Conrad had approached the bed. Now he spoke very low. "Perhaps he's gone already, sir."

"Perhaps, but I don't want to know it if he has. I want to play my part naturally; and to do that I mustn't know too much."

"Very good, sir," replied the valet.

"And now hand me a hairbrush."

Conrad obeyed. Claverhouse brushed his hair most carefully, and again arranged his bed-sheet in one long, beautifully even fold.

"Now you may fetch Miss Wythe, and stay within call." Conrad hastened to obey.

"Vivian," Claverhouse whispered to himself when alone, "you're a fool if you're not there. But it would be just like you to be a fool."

Then he fixed his eyes expectantly on the door, which presently opened to allow Madeleine Wythe, tall, slender,

lovely and thickly veiled, to be shown in by Conrad, who, having performed that service, instantly retreated and closed the door after him.

"Well," said Claverhouse, extending his hand, "so you're here. Welcome!"

She stood quite still, unwrapping herscarf. When it was all put back he saw that she was weeping.

"It was very good of you to come," he said then quickly in a casual tone. "Sit down!" And he pointed to the chair which Beck had occupied.

But she did not sit down, going to the foot of the bed instead and standing there, her elbows upon the crossbar, staring hard at him.

"Oh, Ernest," she said at last, "it can't be true what your letter said. It can't be that the doctor really knows. Persons do pull through, even with the most awful things."

"Sit down and we'll talk about it," said Claverhouse, speaking in a gentle, serious tone. "It's awfully good of you to come and you know how I appreciate it. Still, Madeleine dear, I'm afraid that all I wrote you is only too true. But . . . after all, what of that?"

The tears swiftly chased one another down the girl's cheeks.

"Ernest, Ernest --- ' She could say no more,

Claverhouse looked troubled.

"Be a good girl and listen," he said kindly. "I shouldn't have sent for you if it hadn't been most awfully necessary, you know that; but now that you're here we mustn't waste precious time. You love me, don't you, and want to please me?"

She nodded, sobbing. "But can't the doctors do something? Can't you go somewhere and be helped? Can't ——"

Claverhouse put his hand to his head. "Madeleine, I haven't much breath to talk and I never liked being interrupted. I've sent for you to speak to you very seriously. Will you stop crying and sit down in that chair and listen to me, or will you go away at once?

(Continued on Page 45)

"I Know a Girl Who Has Professed to be Madly in Love With Me For Ever and Ever So Long"

# THE GENTLEMANLY THING

MR. ALBERT EDWARD HARTSHORNE was not a gentleman exactly, either by birth or education; but somehow he always felt that Nature had designed him for that state of being—so perhaps it is not to

be wondered at that this instinctive sense came to have an important bearing on his life. Still, he was not at all puffed up about it. He gave himself no airs; he wore no side on account of it—that is, in the days before the great adventure.

It began—this splendid and signal experience—during the first fortnight in September, at Sheercliffe-on-Sea. Almost as a matter of course Mr. Hartshorne spent the fourteen days' holiday, so kindly granted to him every year by the Palatial Insurance Company, at that fashionable watering place on the southeastern coast of Britain.

It was rather expensive, for everything was on a grand scale at Sheercliffe-on-Sea, including its prices. It was "a guinea a minute," in fact, as Mr. Hartshorne always said; but he stinted himself in cigarettes and picture palaces for fifty rather drab and uninspired weeks in order that he might enter his kingdom for one fortnight in the year.

And it was worth it every time to Mr. Albert Edward Hartshorne, as he had confided more than once to his admiring friend and colleague, Mr. Percy Burrows, whose democratic soul was satisfied with unlimited straight-cut and bird's-eye, and the female society of Mayrote.

society of Margate.

"Fact is, Bert," said Mr. Burrows, as he accompanied his friend in a taxi to Liverpool Street on the Saturday afternoon of Mr. Hartshorne's annual departure for Sheer-cliffe-on-Sea—"fact is, Bert, you are a born nut! It's something in you—it's something you can't account for; but, right enough, it's there! I should no more think of taking a taxi for Sheercliffe-on-Sea than I should think of setting out for the moon on a motor bicycle! But, as I say, it's something that's there!"

Mr. Hartshorne did not take a first-class return, though he hesitated about even that.

It was second-class this time; but, with a rise of half a crown a week in his salary, due on the first of the following May, he had hopes of being able to afford even that next year.

It was when he had settled himself, with his Gladstone bag, his lawn-tennis racket, and his favorite novelist in an excellent sevenpenny edition, on the cushions of his compartment, and had exhorted Mr. Burrows to be good while he was away, that Mr. Albert Edward Hartshorne really began to live. As he moved out of the station a new aura enveloped his being. He inhabited a new heaven and a new earth.

After a very good tea at his boarding house—The Durdans, Rosebery Avenue—Mr. Hartshorne took his first constitutional that evening on the Marine Parade. In his new suit, so full of style and that indefinable quality called snap; in his well-polished brown shoes, each displaying two inches of light green sock; in his new straw hat, with the ribbon of the Bagsworth Free Wheelers, whose colors were the same as I Zingari, except that they were worn the other way up; and twirling a small cane with the abandon of one absolutely and completely happy—he was ready to welcome adventure with both hands.

This romantic feeling crystallized presently into an intense desire to speak to a girl. Mr. Hartshorne did not know a soul in Sheercliffe-on-Sea except his landlady, Mrs. Price, who had welcomed him as an old friend. And the longer he walked up and down the Marine Parade the more intense grew the craving for female society that had so suddenly descended on him.

There was one girl in particular who had caught his eye. She was the real thing—that was the point to which the subtle laws of Mr. Hartshorne's being invariably began directing him—in her very plain but well-cut blue serge coat and skirt, and her very neat straw hat; with her Atalanta-like carriage—as his favorite novelist would have said—and her head held so proudly, with its air of smiling disdain. Yes; that girl, whoever she might be, was clearly, unmistakably it.

That was the kind of girl you seldom saw in Leadenhall Street, E. C. Romance was in the very salt of the atmosphere of this wonderful place. She looked so nice that he felt be must—he really must—risk it! As she passed him the third time she met his eye. He raised his new hat with

A Pair of Glorious Gray

Eyes Went Literally Right Through Mr. Albert Edward Hartshorne

its startling ribbon, a combination that in other glad and glorious fortnights at Sheercliffe-on-Sea had done remarkable things; he raised his hat with a studied grace of style and murmured:

"Nice evening-isn't it?"

And Mr. Hartshorne met with a rebuff. There was no doubt about it—a rebuff! A very firm and charmingly rounded chin came forward a little; a pair of really glorious gray eyes opened in a way that suggested a cobra unhooding itself, and they went literally right through Mr. Albert Edward Hartshorne. Yes; it was a rebuff—not a doubt about that.

Mr. Hartshorne sat down on the first seat he came to in order to collect himself a little. He must really be more careful. Every fortnight, as it came round, seemed to find him a little more ambitious. There was a kind of demon in him that urged him to fly at higher and higher game.

Two years ago he would never have risked such a fall! He must not overdo it altogether; he must not lose entirely his sense of proportion. Why, that girl was a regular out-and-outer! Even the dash, the style, the address of an Albert Edward Hartshorne—even the ribbon of the Bagsworth Free Wheelers might fail of impact on such unmistakable class.

Nay; it had been so undoubtedly. It had been one fair and square in the face. Still, after all, a man of his experience should have known better than that. This was his fifth year at Sheercliffe-on-Sea—and he had behaved as poor Percy Burrows might have done, or any other mere Margate amateur. By Jove, he must remember where he was!

However, the band suddenly struck up on the Marine Parade. The Blue Bulgarian Bazoukas, under the personal direction of Herr Stumer, the gifted chef d'orchestre, discoursed a really charming air from the latest musical comedy and Mr. Hartshorne at once began to feel good again. It would be easy to attach too much importance to the incident; and, after all, even a severe defeat at the beginning of a campaign does not necessarily mean an 1812.

11

MONDAY morning was the beginning of the great adventure. The incident of the girl in the blue serge coat and skirt was a mere prelude to that immortal experience. And it began in the simplest way. Mr. Hartshorne had just had his morning dip and was feeling very good indeed. His hat was at its most dangerous angle; he was twirling his cane as Herr Stumer twirled the bow of his fiddle; he was ready to look the

whole world in the face and to bestow the glad eye on anything that wore a skirt—when he came straight on a dogfight.

In point of fact it was not a fight at all: but it was fraught with such consequences as to aspire to that dignity on the pages of Mr. Hartshorne's history. An officious sort of terrier was bullying a harmless little Pekingesereally doing it no hurt, but rolling it over in the sand and pretending to worry it, and so on. The little Pekingese was yelping a bit though it was not really being hurt at all; but the sight of beauty in distress was at any time enough to fire the chivalrous soul of Mr. Albert Edward Hartshorne.

"Get away, you brute!"

He promptly gave the terrier a cut with his cane and sent it off about its business. "Thank you so much!"

A very clear voice, with a slight note of fatigue in it, came to Mr. Hartshorne's ear. It was from within the precincts of a folding chair about five yards away, which Mr. Hartshorne in the stress of his gallant action

had not noticed.

The tone was so unmistakably a little bit extra that Mr. Hartshorne's first thought, before he had time to envisage the occupant of the folding chair, was that it must proceed from the divinity of Saturday evening, whom, since his rebuff, he had twice gazed on from afar—once at church, which he had attended in the hope of seeing her and had been rewarded accordingly, and once on the

pier, looking more of an out-and-outer that ever.

Mr. Hartshorne was disappointed, how-

ever. The occupant of the folding chair was a very ordinary sort of girl, about twenty-two, and so plain that you might almost have called her ugly—except that Mr. Hartsberse never called any young woman ugly; but he teeth stuck out fearfully, and her chin went

back a goodish bit, and her complexion was certainly not of the best. No; she was plain enough, but her voice was a little bit extra.

Mr. Hartshorne raised his beribboned hat impressively. He then made a dive for the Pekingese, which was sitting in the sand doing no harm to anybody, and bore him triumphantly to his mistress.

The mistress of the Pekingese received her property with quite a commonplace remark.

She merely tickled the head of that mildly about

member of the canine race and said:

"Pore old feller!"

Nevertheless the complete detachment of this your woman's manner, and particularly her odd pronunciatic of the word "feller," appeared somehow to speak to the of Mr. Albert Edward Hartshorne.

Involuntarily he lingered a moment beside the folding chair. The occupant seemed suddenly to realize that he was standing there.

"Thank you so much!" she said, but with perhaps a slightly greater suggestion of fatigue than when she had thanked him before.

In spite of this young woman's common place appearanthere was a subtle something in her manner that at our put Mr. Hartshorne on his mettle. A second time is raised aloft the banner of the Bagsworth Free Wheelers—at this occasion with a suspicion of a flourish.

"Not at all!" he said. "Don't mention it. It we merely the gentlemanly thing."

Just as this young woman's mispronunciation of the King's English had roused the curiosity of Mr. Hartsbors of his excess of modesty seemed to rouse hers. Very grave, she laid down the book she was reading.

Then she looked up at Mr. Hartshorne very intenty and all at once her whole face, including those real unfortunate teeth, lit up in a slow but spreading and quite unforgetable smile.

Yes, she was quite a commonplace girl, so far as locwent; and her clothes seemed to be designed to keep up tradition—very good and neat, and all that, but we really hardly any style at all. However, that smile was deep, so ardent, so searching, that it made quite an intention the young man. Moreover the possessor of the schooled so easy and so friendly that he was tempts: we forget his recent rebuff.

Mr. Albert Edward Hartshorne did not realize it then, but he was at the threshold of the great adventure.

"BEAUTIFUL weather—isn't it?" said Mr. Hartshorne, shooting his cuffs.

As a matter of fact Mr. Hartshorne was not wearing cuffs that morning, but had he been wearing them he would have shot them undoubtedly; so it is well perhaps to give him the full credit of his intentions, which were certainly

Her eyes were blue and they looked up at Mr. Hartshorne very quietly but very kindly, and that subtle smile was in them all the time.

"Yes; delightful!" she said. The voice was still a little fatigued, though not quite so much so as it had been. "But September is generally full of good weather."

"Yes, at Sheercliffe," said Mr. Hartshorne easily. Conversation was one of his gifts. "Do you come here every year?"

"No," said the occupant of the folding chair. "I have not been here before."

"This is my fifth visit." Mr. Hartshorne threw off the words so casually that he wished his friend Burrows could have heard him. The artist in his soul acclaimed it as the perfection of style.

'Really!" The occupant of the folding chair laid down her book, which was a novel in French by an author of whom Mr. Hartshorne had not heard.

"Do you read much?" he said, his eye falling on the paper-covered volume.

"Yes, a good deal." Her promptness and her directness were not only pleasant, they were encouraging.

"I'm always glad when I run up against people with literary tastes," said Mr. Hartshorne. "I've got them myself."

"How interesting!" The voice was certainly a little fatigued, but it undoubtedly meant what it said. Moreover that odd kind of smile appeared to deepen and spread.

Who's your favorite author?" "Oh, I don't know"-yes, the smile was charming-if only those unfortunate teeth were not so prominent. "It rather depends on one's mood, don't you think?"

"Do you think so?" A slight note of authority came nto Mr. Hartshorne's voice. It was not very marked, but still it was there. He was on his own ground now and he elt that he had maneuvered for position skillfully. "I'm a reat believer in having a favorite author. I'm all for Prosser myself."

"Who?"

"Prosser. Big man! But there's Thackeray, of course.

štill, he's a classic. "Which is your favorite work of Thackeray's?" She vas a plain girl, but really that smile had a regular picturelostcard effect.

"Oh, give me Vanity Fair every time! What?"

"I haven't read it."

She went down with a slump. Even her smile could not ave her from Mr. Hartshorne's scorn.

"Oh, but I thought that everybody ---- " Mr. Hartshorne tried his hardest to suppress the note of patronage, but it could not be done by flesh and blood. However, he was tactful; and Noblesse oblige! was instinctively Mr. Harts-horne's motto. "But really, you know, you ought to read Prosser. He's-he's immense!"

'What has he written?"

"I've got one in my pocket." Mr. Hartshorne produced Prosser. "It's not one of his best, but it'll give you some idea of what he

"It looks interesting." The fatigue was really very slight.

"You can have it if you'd like to read it. I've quite done with it."

"No-really! But thank you very much." It was a very polite refusal, but it was very firm, very definite; and it left not a suspicion of a wound-it was all done so nicely.

"Well, if you won't - But it's every man's and every woman's duty to read Prosser.

Mr. Hartshorne was almost in danger of becoming a little rhetorical, as was sometimes the case when he discoursed of literature and the drama, and the wind was blowing from the head of the pier.

Still, for all Mr. Hartshorne's fervor and in spite of Prosser's literary eminence, the occupant of the folding chair could only be induced to take a perfunctory interest in Prosser. This was disappointing. She looked like a rather intellectual girl; but as Mr. Hartshorne almost carelessly threw off the names of half a dozen of Prosser's undoubted masterpieces-names that should have been household words among people of culture-the suggestion of fatigue

returned to her voice, and the smile in her eyes - in her really nice eyes-died down a little. Therefore, very reluctantly, Mr. Hartshorne decided to let go of literature. And yet it was strange that a person who was almost illiterate should

be reading a novel in French.

He would try the drama. She might be better there. She might even belong to the stage—her voice was so good, in spite of a curious little lisp there was in it; but somehow he did not think the stage was her line. For one thing she was not good-looking enough, and her clothes did not suggest it either.

Do you go much to the theater?"

"Oh, yes-fairly often when I am in London."

"What is your favorite play?"

"I don't know-I like so many." She was frank to naïveté-her taste was so very inclusive.

"I s'pose you've seen East Lynne?"

No; she had not seen East Lynne. That was a setback. Inclusive as was her taste, it almost seemed as though the drama was going to do no better than literature.

'Oh, but you ought. Everybody ought to see East Lynne." Mr. Hartshorne was suddenly submerged by his dramatic sense. The wind was undoubtedly blowing from

She Awaited the Arrival of a Most Enthurlastic Admirer

the head of the pier this morning. "It's simply great-so true to life and so fruity. I know that some people go in for G. R. Sims and Ibsen; but give me East Lynne every time."

Inspite of all Mr. Hartshorne's efforts, however, the drama seemed to languish too, and the conversation became, as it were, more general. He was at The Durdans, Rosebery Avenue, which was where he always stayed-because you could depend on the cookingand where the prices, for Sheercliffe-on-Sea, were quite moderate. Where was she?

She was staying, it appeared, at the Hotel Majestic.

"Oh!"

There was a brief lull in the conversation. Somehow Mr.

Hartshorne was not quite prepared for the Majestic. Her easy directness of manner and the simplicity of her attire had not suggested it. The Majestic was so exclusively for "the nuts" that Mr. Hartshorne's artistic sense reproved him at once for having made that statement about the moderate charges of his boarding house. Still, she might not have heard it. At least she did not allow it to affect the general accessibility of her attitude toward him-which, after all, was the reflection of his.

Almost at once, now that the murder was out in regard to this really rather commonplace girl, certain subtle forces within the soul of Mr. Albert Edward Hartshorne took charge of him.

"Bert, my friend," they seemed to say, "it's up to you to put your best left first. You've got to rise to the Majestic."

Immediately and quite automatically the Majestic wrought a change in Mr. Hartshorne's manner. His voice changed into a higher register; his aitches became a little more conspicuous; his vowels grew a little purer-somehow the streak of imagination in his soul was touched.

He was encouraged-not obtrusively, but very kindly and gently and quite firmly-to be autobiographical. Bagsworth was the home of his fathers. For the fraction of

> a moment he hesitated over this disclosure, having made one bad break already; but, after all, that pleasant suburb, less than twenty minutes from Waterloo, was nothing to be ashamed of-though Park Lane, of course, would have had a better sound.

> Still, Bagsworth was not so bad in its way. Yes; he lived there with his mother, who was a widow, and he was the eldest of five children. one of whom-his sister Helen-had died of measles at the early age of seven. His father was dead too-naturally, as his mother was a widow. His father had been an officer in the army. His own profession was the stock exchange; and his youngest brother, Harold, was reading for the bar.

> Mr. Hartshorne was quite simple and modest and pleasant about it all—just manly and unaffected, but a little stimulated perhaps by

"What regiment was your father in?"

"His regiment? Oh, I think it was the Guards."

Somehow the Guards seemed to come involuntarily. Prosser was always a great believer in the Guards.

The rather subtle blue eye gazed at him with its mild light. It was as if she would like him to be quite sure.

"Yes, it was the Guards," he said with manly conviction. "I remember now." "What was his rank?" The lisp grew a

little more obvious in the very nice voice, but the fatigue seemed to be there no more. 'His rank?" There was a moment's hesi-

"Oh, I only know he wasn't a general." "He would have been had he lived perhaps?"

tation at this rather superfluous question.

Mr. Hartshorne Was Magnificently at His Ease

"Oh, yes, of course"-if habitues of the Majestic would be so very encouraging!-"I think he was a sort of a major or a colonel. Anyhow I do know"— in a burst of candor—"I do know he wasn't a general.

In justice to the memory of Mr. Hartshorne pêre it seems right to mention that before he had been gathered to his fathers his profession had been

that of a piano tuner. Therefore it was not to be wondered at that Albert Edward, his son, had suffered all his life from an effusion of the artistic sense. And it was impossible for one endowed with this inconvenient appanage not to feel that a piano tuner was a little out of the picture when it came to a matter of the Majestic. And he had no reason to doubt this agreeable young woman. She did not betray the Majestic on the surface, but to a trained observer there was undoubtedly a flavor of latent nuttiness about her. For example, she cut off all her g's. And anybody with even a superficial knowledge of Prosser was aware that that was an almost infallible sign of blood.

"I s'pose you'll get some huntin' in the winter?" Mr. Hartshorne made quite a vicious cut with his cane at a perfectly harmless dragon fly that was performing some kind of autumn maneuvers in midair.

'Yes," she said quite modestly; "I hope to get a little in the winter."

This was undoubtedly a she-nut pur sang-a nut-ess of the great breed, in fact. Really this thing promised to develop into something perilously like Prosser in real life. The hidden forces in the soul of Mr. Hartshorne never stood to him so manfully as now, however.

"I s'pose"-he made a second cut at the same harmless but irresponsible dragon fly-"I s'pose you'll be goin' up to town for the royal weddin' at the beginnin' of October?"

He knew that for what it was-a real touch of genius. And how simply, how finely this nut of nuts from the Majestic rose to it.

Ye-es," she said-"unfortunately. Will you?"

No; unfortunately Mr. Hartshorne would be there already. He was bound to return not later than Saturday week. Did he say he was in diplomacy?

No-the stock exchange. The artistic sense was almost tempted to forget the stock exchange now. Like the moderate charges at his boarding house, the stock exchange was another bad break.

After all"-as he made his third cut at the still hovering dragon fly and for the third time missed it-"a regular five thousand a year-don't you know?-from vulgar commerce"-Mr. Hartshorne was talking Prosser without knowing it-"is quite as good as fiddlin' with the peace of

The she-nut, her eyes round and starlike with entrancement, seemed to think pensively that it might be so.

MR. HARTSHORNE was in the midst of his social triumph when a rapidly advancing figure caught his eye. And very shining, very splendid it looked in Mr. Hartshorne's sight as it moved in a dancing framework of green sea, golden sunlight and yellow sand. A thrill of excitement passed through his being. It was the lady of the blue serge coat and skirt.

As she stepped so proudly and so daintily over the yellow sands the Majestic was in every line of her. Yes, there could be no mistake about that. In spite of the plainness of her attire, here was nuttiness all compact.

Was it possible that this divinity would hail the lady of the folding chair as a sister nut? Indeed, it seemed most likely. Certainly she was coming straight and rather rapidly toward her, with a coat on her arm.

Mr. Hartshorne had quite a struggle to compose his fluttering heart. This was a wonderful moment in its history. The divinity was undoubtedly making a bee line for the folding chair.

A grave problem of the higher deportment was presented to Mr. Hartsborne's mind. Should be draw himself up to his full height and raise aloft the banner of the Bagsworth Free Wheelers, with a well-bred but slightly ironical air, as one of Prosser's heroes would have done undoubtedly in these romantic circumstances? Or would it be the more gentlemanly thing as real life was in question-to ignore the incident of Saturday evening on the Marine Parade and appear sublimely unconscious of the fact that they had

· mother before? ever conve-Mr. Hartshorne's destiny never Perlthan in this emotional crisis. sto: sea, but with one hand placed He

negligently on the top of the folding chair, as the divinity came up, clear-eyed, firm-chinned and haughty.

"Is this the cloak you meant, my lady? The voice of the divinity was so astonishingly humble

that Mr. Hartshorne could hardly believe his ears. "Put it there, Wilkins. Thank you."

There was nothing more than that. The divinity was already returning whence she had come before Mr. Hartshorne could disengage his faculties from the thrall and impact of the incident. And again she had taken no cognizance of Mr. Hartshorne's presence; but she had not looked right through him this time. She had not looked at him at all.

It would be idle to deny that for a moment Mr. Hartshorne was a good deal shaken. The walls of his little world had fallen in, as Prosser would have expressed it.

Mr. Hartshorne felt that it would be wise to take his bearings a little before he went any further. So this commonplace nut-ess, with no complexion to speak of, and teeth that stuck out and a chin that went back a bit, was a title. Well, he was not altogether surprised. He had felt that that curious voice stood for something. But the divinity! She of the glorious eye, of which he had been dreaming ever since it had cut him dead, she was—she No; it couldn't possibly be so.

"Put it there, Wilkins. Thank you."

They were only six words altogether, but they were haunting him. Very nicely spoken too-no hauteur. But somehow the yellow sands seemed now to be slipping under Mr. Hartshorne's feet. Already those six little words had eemed to change his attitude to life.

It was a merciful thing the banner of the Bagsworth Free Wheelers had not been raised aloft-even with a slightly ironical air.

All at once it occurred to Mr. Hartshorne that the hour had come in which to draw out of action. He had borne himself with distinction, but somehow his conversational power had now deserted him in the oddest way. The polestar of his destiny, however, reënforced by recollections of Prosser, stood to him nobly, even in the order of his going.

Well, I think I'll be gettin' a move on," he said, removing his left hand from the top of the folding chair with airy nonchalance. "Good mornin'! Very pleased to have met.

Thereupon, in grim and deadly earnest, the banner of the Bagsworth Free Wheelers was literally flaunted in the sight of heaven and incidentally in that of the occupant of the folding chair. But Mr. Hartshorne was not allowed to escape so easily as all that.

"By the way, do you mind telling me your name?" How nice the lisp was; and the smile, too, was very fascinating.

"Mr. Hartshorne." Even Prosser would have approved the quiet dignity. "Mr. Albert Edward Hartshorne-but no relation to the late king."

It was his only private little jest-by royal letters patent as it were—just to put strangers at their ease. It never failed of its effect, and long practice enabled it to be so well done as to be generally admired. In this instance it might have been a little superfluous to put the occupant of the folding chair at her ease-she was so much at her ease

already; but, all the same, the glamour of her eyes seemed readily to approve it.

'Mr. Hartshorne, do you care to come to tea at the Majestic on Thursday at half-past four?

For a moment Mr. Hartshorne felt a little dizzy, but he had the presence of mind to murmur that he would be delighted.

"That will be so nice. Goodby! The yellow-gloved hand was raised in a truly Prosserian manner; a firm, decisive shake; a flatteringly unmistakable leavetaking. Thursday, half-past four. Ask for Lady Mary Cardew. Goodby!"

The banner of the Bagsworth

Free Wheelers almost described a parabola in the ecstasy of departure. Mr. Albert Edward Hartshorne walked on air for two miles along the yellow sands.

DEAR SYBIL: Please come to a freak tea here on Thursday, and bring Dorothy and Pauline I have found something priceless. Yours, MARY.

THURSDAY came at last and at last came half-past four; and exactly on time by the clock in the lounge of the Majestic a gorgeously upholstered gentleman announced Mr. Halbert 'Artshorne.

There were five ladies to meet him. Also there was a gentleman-a very soft-spoken and quite nice-looking young chap if his teeth had not stuck out quite so much and his chin had not gone back quite so far. Still, he made himself very agreeable. He was called Cardew and he was Lady Mary's brother. Mr. Hartshorne was introduced to him at once; but Lady Mary was so busy pouring out the tea that she forgot to introduce Mr. Hartshorne to the ladies. Mr. Hartshorne was a little disappointed at this. They were none of them beauties; still, he would like to have known them by name-not, of course, that it mattered particularly; he had so many other things to think of.

Cardew's eye fell on the ribbon of the hat in Mr. Hartshorne's hand. His own, by a coincidence, was also adorned with the ribbon of the Bagsworth Free Wheelers, except that their rather striking colors were worn the other way up.

"Do you play cricket much, Mr. Hartshorne?" said Cardew.

"No, not much. Bicycling's my game."

"You do have sugar, Sylvia?"

Really that lisp of Lady Mary's was charming. But it seemed—alas!—that poor Sylvia was choking, and she had to be soundly beaten on the back by two of her companions before she was able to say that she did not have sugar but she had cream.

Mr. Hartshorne was magnificently at his ease. There was something about the atmosphere of this informal gathering that seemed to call for ease. Everybody was so friendly, so awfully nice to talk to. Not for a moment did the conversation flag; and the cakes and the bread and butter and the tea, which he helped Cardew most assiduously to hand round, were all first-class.

Yes, these nuts were absolutely the pleasantest people Mr. Hartshorne had ever met. Somehow they seemed to speak to his higher nature. There was a great deal in being a gentleman. One could appreciate all the finesse of these people—their agreeable voices, their charming friendliness. their quaint and unexpected little turns of speech. Somehow they made the Palatial and poor old Percy seem very far away indeed.

For instance, this chap Cardew, who frankly admitted that he had not read Prosser, but was so ashamed of his ignorance that he wanted to know all about him-the chap Cardew was in the Guards. He did not look the least like the Guards as the Guards had been represented by Prosser, but still, as Cardew was Lady Mary's brother, he was bound to take his word for it, even against the word Prosser-not, of course, that he could ever have confessed this disloyalty.

"Which was your father's regiment, Mr. Hartshorne said the pleasantly conversational Cardew.

"Oh, the Guards," said Mr. Hartshorne inclusively.

"Yes; but which regiment?"

That rather bad break of Cardew's came, of course, of Cardew's not being up in his Prosser. According to Prosset. if you were in the Guards you were in the Guards, and there was an end of the matter. Prosser seemed to consider rather superfluous to trouble about which regiment and trivial details of that kind. The Guards were the Guards according to Prosser.

"Which regiment did you say, Mr. Hartshorne?"

"Oh, the Guards!" said Mr. Hartshorne; and then, after an instant's reflection as Cardew seemed inclined to press his question: "The cavalry, of course."
"The Blues, I expect."

"Yes; the Blues," said Mr. Hartshorne with decision

mpered by promptitude.

Had Cardew expected the Greens or the Browns, Mr. Harishorne would have been equally prompt and decisive. Cardew was making a bit of an ass of himself-how could be help it, poor fellow, with a chin of that kind! But it all came of his not having given his nights and days to Prosser. The poor chap almost conveyed the impression of not being in the Guards at all.

Cardew looked so inefficient and unmilitary that it was hird to think of him as in any way connected with the British Army; but then he was a viscount, it seemed. Mr. Hartsborne, being a man of large views, thought none the worse of him for it. Yet it accounted, no doubt, for his silk shirt and his light-gray spats, and his general air of having

get up a little too early.

And it was a blow to Mr. Hartshorne's passion for prectness not to have discovered Cardew's romantic status before he had addressed him as Mister quite a number of times. That was, of course, an unfortunate lapse; but it was not allowed to make any difference to Mr. Hartshorne's standing in the charmed circle. And, after all, it was really Lady Mary's fault. She ought to have pronounced the important word "viscount" more distinctly when she had introduced him; as it was, Mr. Hartshorne was almost prepared to take his oath she had not pronounced it at all. still, if he had had any sense—confound it!—he ought to have remembered that to be the brother of a title you are ound to be a title yourself.

"The car is waiting, my lord," a footman had said. Happily these were broadminded people. They treated hose unfortunate "Misters" of his as a thing of nought.

Indeed, the announcement that the car was waiting was really the prelude to Mr. Hartshorne's coming triumph.

"Can I give you a lift anywhere, Mr. Hartshorne?" said the viscount.

It was such a moment as only comes to a man once in his life; but Mr. Albert Edward Hartshorne kept wonderfully cool.

Thanks," he said carelessly. "You can put me down, my lord, at the end of the pier.'

Mr. Hartshorne was as calm as a church; yet somehow he knew that his whole being was raised just now to a higher power.

Goodby, Mr. Hartshorne. It has been such a pleasure!" The shake of Lady Mary's hand was very definite, but altogether delightful; and the eyes, so full of merry kindness, made him feel that she really meant what she said. But even this was not the end of the great adventure.

"Please give me your London address," she said. Mr. Hartshorne had not one of his own cards unfortunately. By a stroke of irony the only card he had in his pocket was that of the Palatial Insurance Company, and he was constrained to write Number 6, Arcadia Villas, Bagsworth, on the back of that.

He apologized very gracefully for this makeshift, which was also treated as a thing of nought by these charming people; and Lady Mary's last words were that she hoped Mr. Hartshorne would find his way round to 1A, Grosvenor Square, some afternoon, when she would promise to be a little better acquainted with the works of Prosser.

MR. HARTSHORNE turned up at the office on the Monday week in a pair of light-gray spats. Much needless comment was at once excited. The head of his department looked as if he wanted to kick him downstairs as soon as he saw them, and several of his peers suddenly

became quite aggressively witty and sarcastic; but that is the worst of underbred people—they are so grievously lacking in the true amenities of life.

Mr. Burrows, however, his faithful henchman and satellite, was not of these. He would not admit, in the presence of the most searching criticism, that the spats were even an error of judgment.

They might be, Mr. Saunders, for you and me," said Mr. Burrows to one of equal standing in the Palatial as himself, over their midday sausage roll and ginger ale at the Bodega, at the corner of Throgmorton Street. admit that for you and me they might be going a bit far; but, you see, with Mr. Hartshorne it's different."
"Can't see it myself," said Mr. Saunders. "In my opinion

it's pure swank."

"No, you are wrong there, Mr. Saunders," said Mr. Burrows earnestly. "It's not swank at all in Bertie

Hartshorne—it's something deeper than that."
"Don't believe it!" said Mr. Saunders, biting rather savagely at his sausage roll. "I was at school with young Hartshorne, and he was always inclined to consider himself better than chaps just as good as himself. I know his mother had once taught in a school, and all that; but I shall always maintain that spats are uncalled for in a chap like young Hartshorne."

However, Mr. Burrows still saw the matter in another

"No, Mr. Saunders," he said, "it's the wrong way of looking at it, to my mind. It's just a matter of what you happen to be born. You may be a born musician, or a born artist, or a born stamp collector. Well, in my opinion Bertie Hartshorne is a born swell."

During the next week Mr. Burrows' view gained ground in the office. A pair of light-gray spats were without precedent, except in the case of the submanager who, of

# LILY OF THE FIELD

#### By Maude Radford Warren THE American nation has a frank admiration for the lilies of the field, who toil

"If You're Not Afraid of Losing His Love, Why Don't You Show Him These Bitts?"

not, neither spin, and eclipse theglary of Solomon. It is unentood that if they toiled they muld not look the part. The nan who cannot afford them is quite willing for them to be smamental and parasitic, and to form an occasional spectacle for him as he sees them from a bus on Fifth Avenue going into some exclusive place for tea, or m he envisages them at the grand opera through cheap pera glasses which make a organgle from his skyward seat to their boxes. The woman them may or may not wish she muld change places; but she, too, looks at them with admiration. And every one knows that the field in which such lim are set must be a Field of the Cloth of Gold; that their mly real excuse for being is that mach is a vehicle of conspicuous onsumption—each advertises ome man's ability to pay.

The moral right of the golden ly of the field to exist may be stioned, but not her finanial right. It is equally not to requestioned that the middlegirl, the daughter of parents comfortable circumstancesin elastic term-has no right to be a lily of the field. Her

fight is to be a working mate to her husband, who has no nom in his scheme of things for a parasite.

Marjory Martin was a middle-class girl, reared as a lily of the field but born to be some sensible and fragrant bearth flower, like Sweet William or mignonette. Marjory's parents had themselves had the sort of training that should live fitted them to become wise parents. Neither of them aid known an easy childhood; they had to earn their own livings by hard work. They had received some rather buffets from life, which they had taken pluckily.

They began their married life with the determination to we well within their means, carry a good life insurance, and save enough yearly besides to pay for possible illnesses.

Their young married friends thought they did not spend enough money for fun; older critics called them sensible. After Marjory came they were not quite so sensible.

"I suppose I've been extravagant to get this for Marjory," Mrs. Martin said once, showing her husband a filmy little dress; "but I never had any pretty clothes when I was a child. I well remember a little girl saying to me: 'I saw you wear that dress you have on last Sunday in church! Haven't you more than one dress?' I hadn't, and I well remember the humiliation I suffered. I am going to see that Marjory looks as well as other little girls.

Whenever Martin bought an expensive mechanical toy for Marjory he justified himself on the double score that it would be educational for the child and that he himself had never had anything to play with except blocks and cheap marbles and a broken jackknife. If the Martins had put their psychology into words it would have gone something like this:

"We have made the most of ourselves with almost no advantages. If we had been used to nice surroundings when we were children we should have been farther along now. Our child must go beyond us; and she can do that only when we give her a good start."

So Martin, on two thousand a year, gave Marjory, while she was in the early grades of the grammar school, as good an appearance as though he had had four thousand. He was able to manage it because they lived in a five-room flat where Mrs. Martin did her own work, even the washing. Yet she was careful to look well herself, so that the mothers of nice little children, with whom she wished Marjory to play, might see that she also was keeping up with the procession of rising Americans. By the time Marjory was in the late grades of the grammar school Martin was getting thirty-five hundred a year, and his daughter was taking lessons in dancing, music and French conversation.

One night Martin came home to dinner jubilant. His salary had been raised to forty-five hundred dollars-a long jump and perhaps the last he should ever receive. He did not mean to tell his wife until after the meal. Marjory had to be called twice to the table; and when at last she arrived her eyes showed unmistakable traces of tears,

"What's the matter, precious?" her father asked her

Marjory's very pretty face became convulsed with grief, "Why, that nice new girl, Carrie Jenkins, came to see me to-day," she sobbed, "and she said: 'Why, Marjory why do you live in this tiny little flat? Why, I thou from your clothes you'd have a nice house somewhile

"Don't say 'why' so much," murmured Mrs. Martin mechanically.

"And then," Marjory continued, "then she said: 'Why, does your mother do all her own work? Why, my mother has two maids!"

"She was a very rude little girl to make such remarks about the home of her hostess," Mrs. Martin said.

"I suppose she might as well say them as think them," Marjory sighed.

"Come, come!" said Mr. Martin.
"Aren't you satisfied with what father
and mother can give you?"

Marjory fled to his knee.

"Oh, yes," she said; "only I thought maybe you could give me more."

The Martins smiled at each other rather painfully across Marjory's head. Doubtless one symptom of the ability to rise was this fashion of demanding more from parents. Later, when the child was doing her home work on the diningroom table, the elders went into the living room and talked over their new possibilities.

"We've come to a place of departure."

"We've come to a place of departure,"
Martin said. "We save between four
and five hundred dollars a year over our
living expenses and premiums. With my
new raise, that means we have a margin
of from fourteen to fifteen hundred.
Shall we blow it in? You look pretty
tired to me. Marjory doesn't give you
much help round the house, does she?"

"Of course I have her dust and make a bed now and then," Mrs. Martin said rather guiltily. "Later on I mean to teach her to cook. She does housework badly—hinders rather than helps; but I mean to have her learn—only just now, with all her school work, she really hasn't time."

"She's a nice child," Martin said; "but ——"
"She has her faults, of course," Mrs. Martin said; "and
I suppose it's natural for her to want the things other
children have whose parents have a scale of expenditure

higher than ours."

"I've always meant that some day you should have a girl to do the housework," Martin said; "or a maid, as Marjory puts it."

"It would be nice for Marjory."

"It all comes back to Marjory, I suppose," Martin agreed dryly. "I guess we've come to the parting of the ways, Maggie. We can go on as we've been doing and save so much that by the time I'm laid on the shelf we'll be able to gratify all reasonable and many unreasonable wants, and leave Marjory a few thousands. Or we can live up to every cent of our income—paying the premiums, of course—and then, when I'm retired, you and I can scrape along modestly on the income from the endowment policies, leaving Marjory, in the end, very little."

"It means," Mrs. Martin translated, "giving Marjory an absolutely unfettered youth. It means she need never be hurt at being left out of things because her clothes aren't good enough or because her home isn't good enough. Oh, Henry, I can't bear to have her hurt when there isn't any need for it! She'll have troubles, no doubt, when she is older; we can't ward off grief forever from her, but I do want her to be able to look back and say that the early part of her life was perfect!"

#### Off to a Finishing School

"NOTHING very joyful ever came my way until I met you," Martin said. "Then I forgot any bad luck I'd had. But I've got no assurance as to how much good luck life is going to bring our child. I only know how much happiness we can bring her."

Somewhere up aloft there must have sat a colony of ironic spirits, grinning at the sensible Martins. No voice whispered to them:

"You are going to make personal sacrifices so that you, a forty-five-hundred-a-year man, may have your child associate with the children of ten-thousand-a-year men. You are inducing in her a subtle dishonesty, because you are keeping up appearances that don't belong to you. For every comfort your child has, she will see among these ten-thousand-a-year children a corresponding luxury she cannot have. You will inspire in her a spirit of envy and climbing, a spirit of snobbery and false values. She will judge other girls by their clothes and homes, and the amount of spending money they have. She will use whatever graces of personality she possesses to ingratiate herself, not with children who are intrinsically worth while but with children whose material possessions are worth while."

Their own experience should have suggested to them:

"You want to guard your child from a youth as starved and joyless as your own was. You remember your own deprivations and the heartburnings you suffered because other children had what you wanted; and the slights and

"I'll Jave Jomehow and Make Up That Money You Had to Pay"

humiliations you suffered from those luckier children—the very slights and humiliations your own child is now about to bestow on others. You should realize that what you suffered strengthened your characters, hardened your nerves, and made you the stuff that conquers the world. Without those deprivations you never could have known the happiness you have had in each other, for you would have unconsciously expected too much of each other; a fortunate youth would have made you exacting of life. And now you ignore all that this discipline has done for you and are about to sap the moral vitality of the person you love the most."

The Martins moved to an eight-room apartment, for which they paid a thousand dollars a year. Six hundred a year had to be set aside for the premiums. As maid, Mrs. Martin found a woman in late middle age, not especially strong, who was glad to come at four dollars a week. She did only about half the work, but she was most unexacting, being willing to wear a cap and never demanding a cleaning woman or a washerwoman to assist her.

Mrs. Martin herself still did the washing by means of a suction machine, which required only some muscular pounding for ten or fifteen minutes. It never occurred to her that Marjory might have developed her own arm muscles by swinging the washer, and it would have offended Marjory's young dignity if she had been asked to do the work. Mrs. Martin often said jubilantly to her family that she and Mary achieved the results of a washerwoman, cook and houseman. When she said that, she merely thought she was proving herself a good manager; it never occurred to her that she was developing the already well-marked tendency of Marjory toward keeping up false appearances.

There were twenty-seven hundred dollars a year remaining, for food, light, clothes, amusements and incidentals. Mrs. Martin made the living of the plainest, except when guests were expected. An undue proportion of the money went for clothes and entertaining. The Martins scarcely questioned the wisdom of their expenditures, because Marjory was so happy. She expanded under the sunshine of her larger life. The apartment was full of her gayety and that of her young friends.

Marjory was both pretty and popular. Every door at which she knocked in her high-school days opened welcomingly. Her parents were always receiving compliments about her from the parents of other young people. Her teachers spoke of her pleasantly—not as a good student, for she was merely average when she was not below the average in her marks, but as amicable and well-mannered, and a pleasure to behold.

Marjory was eighteen when she graduated from high school. Martin had assumed that she would go to college. He was not himself a college man, and for that reason perhaps he overrated the value of college training. Such a pretty girl as Marjory was likely to marry; but he intended her to be able to earn her own living in case she did not marry and wanted some occupation, or in case she married badly and might be obliged some day to take care of herself.

He knew that a college education would fit her to be a teacher; but shortly after graduation Marjory began to talk about a finishing school in the East, to which three of her special friends were going. Martin found that a year in that school would not be the equivalent of a year in college—that, in short, the school would give Marjory very little except that intangible thing called polish and the continued society of her friends. Moreover, it was very expensive; but, as Marjory pointed out, father and mother had always managed somehow.

"I suppose," Martin said to his wile, "that I could sell a bond; butif Marjory isn't going to college I think she ought to stay home with you and learn sensthing about housekeeping."

"She does know something," Mn. Martin protested.

"Oh, yes—how to handle a chaing dish and make salad dressing and fancy cake; but she's got no organisi knowledge."

"I haven't wanted to hurry her," Mrs. Martin said; "she's so happy and there's plenty of time."

They gave Marjory a year in the Eastern finishing school and she came back with a remodeled accent, which she handled in a convincing fashion and with a very sophisticated manner. She had also acquired extravagant tasts in clothes and flowers and the nicetics of the toilet, for she had associated with the daughters of millionaires, whose whims were always satisfied.

Their expenditures were such as Marjory, in her high-school days, would scarcely have looked on as credible. Their connection with her ended when she went home; for them it had been

only casual, because their relationships had been made from babyhood. She had gained from them nothing but dicontent with her parents' forty-five-hundred-dallar income, which looked like eight thousand.

Marjory was secretly ashamed of wishing that her father had fifty thousand a year; but she could not quite coosal her belief that she was born to a higher sphere than the soe she occupied. Perhaps she was also disappointed because no rich young brother of her schoolmates had appeared to carry her off to her deserved sphere. She was so pretty and attractive, and so much admired by young men, that it was perhaps natural for her to think that the ideal loverideal in fortune as well as in character—must surely appear.

### Marjory Falls in Love

HER parents observed her discontent. It was then that Martin began to question whether he had been vise in letting her associate with young people so much better if financially than herself. He proposed that she be set it once to learning to keep house; but Marjory begged to go to college instead. Mrs. Martin said she thought housekeeping would be too dull for Marjory after what she had been accustomed to; and that, besides, if she attended college at once she would still be in classes with some of her old friends, and could pick up her old life about where she had dropped it. Martin agreed that his daughter needed more education; and so Marjory had her way.

The girl, after all, had good stuff in her. She could not have lived with her unselfish father and mother without having absorbed something of their spirit. For all the mistaken training, they daily set an example of consistration for each other and of appreciation of certain fine ideals which their worship of the god of false appearances could not wholly destroy. It was because Marjory was the rathing, after all, that in her second year at college, when she was twenty-one, she fell in love with young Grow. He was a young man whose father had rather less mean than the Martins. After working his way through college he had graduated at twenty-two from the engineering course, got work with an electrical company at two dollars day, and when he was twenty-six was receiving eighter hundred a year. It was then he met Marjory at a day.

Almost from the first her other lovers ceased to make to her. Because the core of her really was sound, after the began to be attracted to Grover it mattered nothing to be that he was not rich and that he had never been in any of the exclusive societies of high school or college. She make knew that he was her man. Not being able to forget at a once her acquired worldliness she assumed that, poor of he was, he would soon be making plenty of money and the she could easily keep up with her expensive friends. Standard always managed somehow.

The day had been when Marjory had said to hered the she would not marry any man with less than ten thousan year—that she meant to marry some one who would be financially considerably beyond where her father left of but love made her lose what little practical sense she habout money. When her mother pointed out that Grouss salary of eighteen hundred dollars was relatively father than that to which she had been accustomed, Mar, or replied that it was much more than the salary with the her parents had begun.

When Mrs. Martin replied that she had been a good manager Marjory said she would learn to be. Words of warning pattered off her mind like shot off a sloping roof. She simply did not hear what was said to her; she heard only Grover's voice and saw his face. She was quite steeped in love and Grover.

"I don't know what we're going to do!" mourned Mrs.
Martin to her husband. "I was so sure she'd marry a man
with money! We never said it out loud, but that was really
why we brought her up in the way we did. She herself has
often said that it was just as easy to marry a rich man as a
poor one."

"I'm not so sure but that it's easier to marry a worthless fellow than it is to marry a good fellow," Martin replied rather grimly. "I'm thankful that she's got some one as fine as Grover. He'll get on too."

"But eighteen hundred ----

"Put Marjory in the kitchen at once," advised Martin.
"If I were you I'd give the maid a holiday and drop all the hurdens on Marjory. You and I could suffer a while if it were for her good."

Mrs. Martin saw the wisdom of the advice, especially as the engagement was to be a short one. She suggested her

father's plan to Marjory.

"Oh, mother," protested Marjory, "there'd never be time for that, with my clothes to see to and all the other things to do! Besides, cooking for all four of us would be nuch harder than cooking for John and myself. I suppose I'll have to do my own work at first; but anything I don't now I'll pick up as I go along. Housekeeping can't be so lard; look at the easy way you've always done it. Besides, know a lot already."

"All the same," Mrs. Martin said firmly, "you've got to egin to take lessons from me at once. I ought to have

nade you do it years ago."

They did begin some informal lessons; but then Marory's trousseau began to occupy her time, and her friends a bombarded her with showers and teas and luncheons and dinners that Grover said he felt as though he were ot engaged just to Marjory, but to the whole social game. farjory was so excited and so tired that Martin told his ife to let things swing on as they were going.

"We've made a mistake with the girl—that's plain," he sid. "Now she and Grover will have to work out their wn salvation. The thing has got beyond our control."

Grover was so much in love with farjory that he thought her a marvel of impetency as well as of charm and sauty. He was sorry he had so little oney; however, he never doubted but at the two could live and save on his dary. He had not thought much about penditures, but he remembered having ard his father say that no one ought to ty out for rent more than twenty-five r cent of his income; so he told Marjory at he thought they must get a flat costg not more than thirty-seven dollars d a half a month. Marjory delegated e flat hunting to her mother, stipulatgonly that it must be within a certain rritory, new and pretty, and not too rk or too small.

#### Marjory's Incompetence

FTER weeks of wearying search Mrs. I Martin found something that would for forty dollars—that is, it was in a od neighborhood and in a good-looking artment building, where the other flats ited for sixty dollars. Marjory's flat s cheaper because it was squeezed in at angle, and because, of the five rooms, only adequately lighted ones were the ingroom and the guestroom. Marjory's starting her married life with the ne false front the Martins had been wing for ten years.

Many wedding presents were put into little home and Marjory's parents led whatever furniture was needed. ere was a final furore of entertainment. retty wedding, a brief idyllic honey on, the expenses of which were paid Grover's firm; and then Marjory and husband came back to take up the iness of living. She went into her little ne to find it well stocked with proviis, which her mother had supplied. rjory accepted this start as she always pted good things—gratefully, but just hough they were hers by divine right. 'he Grovers had never talked over the ter of a wife's housekeeping allowance. ver merely expected to pay whatever Marjory presented to him. Marjory found out on their honeymoon

various dishes that Grover liked and had made a list of them. She felt quite businesslike. She resolved to deal with the butcher and grocer who had always supplied the Martins, "because," as she said regally, "they will know what I like." They did indeed; and as Marjory, ordering over the telephone, never asked what anything cost they charged her top prices.

During that first month Marjory's girl friends were always running in for luncheon or tea, and Marjory begged her mother for the loan of Mary, her mother's maid, to help her. Several postnuptial affairs were given the couple, and Marjory arranged several little luncheons and dinners in order to pay off the antenuptial obligations. She felt that she was being very economical, because she let her mother and Mary do the work in the kitchen on these occasions instead of hiring a caterer. Grover, very busy and too much in love to be quite clear-eyed, thought Marjory was doing most of the work, because he saw her getting toast and cereal and coffee for their breakfast. Marjory herself scarcely realized that Mary was carrying the responsibilities which should have been hers.

The first of the next month the bills came in. Marjory had not done any financial thinking, but she knew that their expenditures must not exceed one hundred and fifty dollars a month, for that was all Grover had. She was appalled at the number and size of the bills, and angry, not at herself for being extravagant but at the scheme of things that did not allow Grover more money. The grocer's bill was seventy dollars; the butcher's, twenty-five; the milkman's, six; the florist's, ten; the baker's, three; light and heat, five; the cleaner's, four; the department store's, twenty; and the rent was forty. That made one hundred and eighty-three dollars.

Besides, Marjory had been spending money for a cleaning woman, for carfare, for an occasional matinée, and for other sundries. She was pretty sure that twenty dollars must have gone in such ways. She was afraid to show the bills to Grover; she took them to her mother, with the remark that her tradespeople must have been cheating her.

In that moment Mrs. Martin realized the futility of the many sacrifices she had made in order to produce the charming finished product who was Marjory. She saw herself in perspective in an endless line of American parents who are hurting their young by an unwise tenderness. She had seen in Marjory what she considered her own and her

husband's best characteristics, improved on, and she had secretly hoped to see Marjory carry out dreams and ambitions that had proved too high for herself.

Her own disillusions had taught her that the world cannot be a Utopia, and yet she had made an illogical Utopia for Marjory. She realized now she had hoped that, after all, Marjory had sufficient instinctive judgment to make her fit to be a poor man's wife. She felt a fear for her child's future happiness and a passion to help her. She wanted to teach her, all at once, to be wise, though she knew it was a task like sweeping away the ocean with a broom.

"The tradespeople haven't cheated you, Marjory," Mrs. Martin said severely. "It's your own incompetence. If you want to keep John's love you've got to learn to be the wife of a poor man. Don't toss your head! He won't consider inefficiency charming. If you're not afraid of losing his love, or at least destroying something of his faith in you, why don't you show him these bills instead of bringing them to me with the expectation that I'll offer to pay them?"

A flush of shame, so deep that it hurt, reddened Marjory's face. For the first time she realized she was no longer dependent on her parents, but on her husband.

"I'll pay these bills," Mrs. Martin said, "because I don't want John to find you out. Your father would say you ought to confess, and so you should; but I don't want John to lose faith in your ability yet. You go over these bills with me and I'll point out your mistakes."

Marjory sat humbly by her mother's side.

"You shouldn't have spent anything for flowers," Mrs. Martin said, "except fifty cents for a begonia in a pot, which would have lasted the month. I don't care if you did have luncheons; you cannot now afford the sort I used to rive you-indeed, you can't afford luncheons. As to the cleaning, you should have done it yourself with benzine; you can't afford to consider your hands. As to the milk bill, it shouldn't be more than half what it is; get one quart daily and use the top of the bottle for John's coffee and cereal. You've no right to have sweetbreads and squabs and tenderloin steak in your butcher's bill. Your light and heat shouldn't be above three dollars; you must have a fireless cooker and you must turn off the electric lights when you're not using them. You needn't go to the baker's at all. With all those new clothes, why do you need anything at the department stores? As to the grocer's bill, it's outrageous! My own wasn't over fifty for four people. Why do

you have out-of-season vegetables and fruits? The trouble with you is that you've not gone to market and looked things over; you've taken whatever they've sent at their own prices."

### Trying the Allowance Plan

MUCH more of the same sort Mrs.
Martin said, which left Marjory in
tears, chastened and really convinced
that something was wrong with her.

that something was wrong with her.

"You go home to John," Mrs. Martin said, "and ask him for an allowance. He pays for rent and life insurance, five hundred and forty dollars a year. For carfare, lunches, clothes and sundries, he ought to have two hundred and sixty or a bit over. You ask him for an allowance of eighty dollars a month."

"Just about what the grocer's bill this month was!" Marjory said drearily.

"Yes," Mrs. Martin said; "and remember that out of that you'll not only have to pay all the housekeeping bills but you'll have to dress yourself, too, when your trousseau wears out. You'd better try to save a little each month. I'll give you my cookbook, and you must come over here every day with a list of what you've got in your ice box; and I'll help you plan.

"Don't buy a thing without consulting me. I'll do my best to make up for spoiling you in the past."

When Mrs. Martin dropped her severe manner, kissed Marjory and drew her a heavy check, Marjory felt better. She went home determined to learn how to live within her income, and still somewhat depressed by the fact that mere love could not teach people how to live wisely; that they needed common sense too.

That evening she talked over the allowance plan with Grover, who was so delighted with her suggestion and her businesslike attitude that she felt too cowardly to tell him the suggestion came from her mother. He at once wrote her a check for eighty dollars; and she thought, with relief, that it would all be a clear saving, and that she could apply

(Continued on Page 37)

Her Hands Were Not Jo Well Kept, But Her Brain Was Kept Much Better

PINCH HITTING FOR

CUPID By Charles E. Van Loan

Joe Jat Down Acress the Lobby With a Magazine in His Hands

ATHER than have an argument about it, I'll admit there is such a person as Cupid and that he wears nothing much but a bow and a fistful of arrows, and does considerable reckless shooting. I haven't a thing in the world against him, because if he ever took a shot at me it went in his error column; but I do claim that Cupid doesn't know how to place his hits where they'll do the most good. I've got an outfielder on my payroll with the same failing and he's about as useful to me as a box of corn salve would be to a mermaid.

I'm a bachelor by choice—I did the choosing, if anybody should ask you-but there's no law against a single man keeping his eyes open. I've seen a lot of things that have sort of prejudiced me against romance. I'm not exactly sour on the subject of matrimony, but maybe I'm just the least little bit "turned," as my mother used to say about the

If you listen to the baseball players, I wouldn't marry the best woman on earth. I don't go so far as to say that. Most likely the competition would be too keen for me and I couldn't make much of a showing. I've got to the point where my belt measures the same as my chest, a perfect forty-four all the way down; and I like to take things easy.

I've been managing a big-league ball club for so long that the smart-Aleck reporters call me the Methuselah of the National Pastime; but, even so, I'm better preserved than the married men of my age. I've only had a ball team to worry about. Maybe, if it came right down to it, I could still get out there and do a pretty fair job of third-basing; but I'm thankful I don't have to try. Young men for war; wise men for counsel. That's me-and I like my slippers and my pipe in the evening.

Getting back to this true-love proposition, it's the change of pace that makes it so dangerous. A man may be able to dodge the violent sort that hits like forked lightning, but what is he going to do with the kind of love that takes hold easy and hangs on like a lingering fever?

Another thing is that you never can tell who Cupid will send up to pinch-hit for him. You wouldn't think a drunken shoe drummer from St. Louis and an old fellow like me could play the little god of love without make-up; but we did it.

When our team visits Chicago we always stop at a certain hotel. We've done it for years. It's the sort of place that advertises a room and bath for two dollars a day. They've got that room, too, and they'll show it to you if you insist. The management caters to folks from Omaha and Chillicothe, and the lobby is full of palm trees and imitation rubber plants and genuine rubbernecks; but we get a good rate and we always go there.

When you give a hotel a steady play you get to know the people who work round the place. For instance, there was Mary McConnor. Mary ran the cigar counter and the news stand, and I guess she was on speaking terms with more big-league ball players than any woman in America, because nearly all the other teams stopped at the same house when they were in Chicago.

The ball players liked Mary. She knew what a box score meant and in a fanning bee she could hold up her end with anybody. She didn't get to see many games, but the boys always told her about 'em afterward and she had the inside dope on everything that came off, from Boston to St. Louis. We figured on getting the freshest news when we got to Chicago. There's some sense to a girl like that. If anything makes me weary it's a woman who tries to talk baseball but doesn't know the difference between a bunt and a bat bag.

Mary was a good mixer too. I don't mean anything wrong by that. She was the sort that you could josh with if you wanted to josh, and then she could turn right round and be serious half a minute afterward. She'd been handing out cigars and newspapers for so long that she had a pretty good line on men in general. She knew the best and the worst about 'em, and nobody fooled her very much. You couldn't put anything over on Mary, and I'll bet nobody ever tried it a second time. Of course a girl behind a counter in a big transient hotel has to stand for a lot, because she meets all comers; but Mary knew how to handle the fifty-seven varieties and the man who crossed the line got a call that was worth remembering.

The ball players were her favorites. I don't know as I blame her. Take 'em all

round, professional ball players grade as high as young men in any other line—perhaps even a bit higher. Their jobs depend on their keeping straight. Men who drink and gamble and stay out at night don't last long in the big league. There's another point in favor of the ball player he's always just out from under a shower bath. A man who is as clean as soap and water can make him is likely to be clean other ways too.

Of all the ball players, I think Mary liked us the best. The married men used to show her the pictures of their kids and the youngsters told her about their girls back home. If I tried a week I couldn't say anything better about Mary McConnor than just that.

T WAS in the spring of 1905 that Joe Bancroft came to us from some little league out West. Dabney, the veteran second baseman, began to go bad in 1904 and Joe was the pick of the recruits the scouts dug up for me.

Joe was rather old for a recruit—a serious, quiet sort of a chap, not at all handsome, but solid and manly looking. Baseball was strictly a business proposition with Joe and it didn't take him long to demonstrate that he was the man to fill the gap. He was a great fielder, a sweet, natural hitter, and a streak on the bases.

He was a better listener than he was a talker and his idea of a riotous evening was to sit up till ten-thirty playing checkers with the night watchman. Because he didn't have much to say, people got the idea that he was slow; but he could think fast enough on the field. Joe had real baseball instinct. He wasn't the helpless sort of player that always looks toward the bench when in a tight place. Joe didn't need anybody to do his thinking for him. If the ball was hit in his direction we could depend on him to whip it to the point where it would do the most good; and the tighter the pinch, the steadier he seemed to be.

We made Chicago on the first Western trip and Bancroft was the man they all wanted to see. Some folksparticularly the Chicago fans—had been hoping that, with Dabney gone to the minors, we'd have a hole at second base that a lot of games would leak through. It's always nip and tuck when we meet that Chicago team.

On the opening day of the series Bancroft played as though he had a horseshoe in his hip pocket. Everything broke exactly right for him. He pulled off four or five circus stunts, started two double plays, cut off a run at the plate, and in the seventh inning he whacked out the triple that won the game for us. Joe was the man of the hour, sure enough, and the evening papers said that unless he was playing faster than he knew how we'd never miss Dabney.

That evening I was sitting in the lobby, close to the cigar counter. Mary had come on watch at six o'clock and most of us had been over to shake hands and say how glad we were to see her again.

"Well, Chief," says she, "your new man delivered the goods. I haven't seen him yet. What does he look like?"
"He's no chromo," says I. "He looks a lot better on the

field than off it. Watch for a man about twenty-seven, with a big head of hair and an undershot jaw. That's Joe. Don't try to flirt with him, Mary. He's bashful."

"I think I see myself!" says Mary with a sniff.

Not many of the boys were round the hotel that night. Some theatrical press agent with a dead show on his hands had invited us to go and sit in the boxes as guests of the management, and most of the players fell for it. I didn't because it has been my experience that they never give away any seats they can sell. A stage box for nothing usually means a punk show.

Along about eight o'clock Joe Bancroft came wantering through the lobby. Big towns were new to him in those days and he couldn't seem to get used to living in a hotel. He anchored himself against a marble pillar at the end of the cigar counter, and he was standing there with his hat pulled down over his eyes when the shoe drummer from St. Louis came wabbling in from the café. The drunner had been treating his expense account unkindly and war pretty well illuminated.

I don't know what he said to Mary, but I could see by her face that she didn't like it. I was watching for the comeback when all at once Joe Bancroft stepped over, for all the world as though he knew this fellow and was going to speak to him. Joe put his hand on the back of the drunmer's neck and shut down on it with a grip that made his knees knock together.

No fuss, no scene; it was done so quietly that if I hain't been watching I never would have known that anything out of the ordinary was happening.

"Now then," says Joe, "you can tell this lady that you're ashamed of yourself."

I could see him digging his thumb in under the drumme ear. There's nothing I know of that hurts any worse that

The drummer said he was ashamed-he would have said anything about that time—and Joe let go of him. B went weaving back to the café, rubbing his neck and talket to himself; and Joe turned on his heel and faded out :=

I managed to need a smoke about that time.

Well, Mary," I says, "you are still batting a thousand with my ball club. Even the new man is for you." "What do you mean-for me?" says she.

"Oh, nothing," I says; "but what was Joe Banco's doing to that drunk?"

"Land of liberty, Chief!" says she. "You don't men to tell me that was Bancroft! I took him for an issa farmer."

"Give us time, Mary, and we'll train him. We've out had him since the season opened. He still wears detached cuffs and made-up neckties."

"So he's the new second baseman!" says Mary. "Is == his regular speed? Does he go round defending heipies women and choking folks, and all that sort of thing!

"Not so you could notice it," I says. "He won't rott talk to the married women with the club and a skirt scan him worse than the Miner's bean ball. But maybe," #15 I, "he saw something about you that took his fant;"
"Nonsense!" says Mary. "Why, he never even local."

at me!" "Don't be too sure of that. Bancroft has got a way "

noticing things with the back of his head. The different

between what he sees and what other people think he sees will make suckers of a lot of base runners this season."

"Is he as good as poor old Dabney used to be?" mestion was just like Mary. She wanted to get a line on

him straight from headquarters.

"As good?" says I. "Why, the best day Dabney ever saw he couldn't beat this fellow! Bancroft's a marvel that's what he is, a marvel! He's the sweetest infielder I've seen since-since -

"Since you quit, Chief," says Mary. Confound it! That girl can usually tell what you're thinking about.

"If he's as good as all that," she goes on, "I'll have to keep an eye on Mr. Bancroft. Thank him for me, Chief; but please tell him not to do it again. He might get me in bad with the boss. The man that he choked is a shoe drummer from St. Louis and he spends a lot of money in the house.

The shoe drummer, pinch hitting for Cupid, got on jest base and then pulled up lame, as you might say. More out of mischief than anything else, I went in to run for him. It wasn't any of my business, but I dropped in on Bancroft just as he was getting ready for bed.

"The lady at the cigar counter would like to meet you," says I.

Joe suddenly stopped undressing with his shirt half over his head.

"Huh? What lady? Are you trying to kid me?"
"Tell it to Sweeney!" says I. "I saw the little squeeze play you put over on the souse. Nice work, Joe!"

Bancroft pulled his shirt off and sat on the edge of the bed for a while, thinking.
"Oh, that!" he says. "Maybe you think I was grand-

standing, Chief; but I wasn't-honest! I don't even know what that girl looks like, but it went against the grain to have that drunken lobster call her 'Dearie.' If I'd only had him out in an alley somewhere I could have handed it to him right. I-I don't like his kind of folks, Chief. I was brought up to treat women different.'

"You needn't apologize to me, Joe. It was coming to him and he got it. And, as it happens, that young woman s a particular friend of mine; in fact, she's the friend of all visiting ball players. They don't make 'em any finer than she is. That was Mary McConnor, Joe. You must have heard of her.'

"Nope," says Joe, beginning to yawn.
"Well," I says, "there's a young woman with gifts. She knows more inside and lowdown stuff about the workings of this league than the National Commission. If there should be a row in the dressing room in Boston to-morrow Mary would know all about it by the end of the week. She's got a line on every new man that breaks in. I'll bet she's got your batting and fielding average figured down to the minute."

"No!" says Joe. "Well, what do you think of that? Must be quite a fan, eh? . . Did she—say anything, Chief?

"Nothing but that I was to thank you and she'd keep her eye on you after this. She's all right, Mary is; and if it was me she wanted to meet -

"Good night, Chief!" says Joe. "I'm going to turn out the lights and go to bed now."

He did it too; but there was an arrow planted in him a foot deep.

DON'T know where people get the notion that true love can't be the real thing unless it breaks all the speed records. Maybe it's from the short stories in the magazines that a man can read in twenty minutes, and in those twenty minutes everything in the world happens. Two young people start out on the first page as total strangers and at the end of the fourth page they go into a clinch.

"I love you!" says Harold. "Be mine!"

"This is so sudden!" says Myrtle-and it is too. Zing! Just like that. On the fifth page you get the

orange blossom finish and the life sentence at the church. Now in real life it's different. Not many men try to knock the cover off the first ball the lady puts over the plate. They want to wait her out and see what they're getting; they want to study her curves and her snap throw

to first. That's the sensible system; but there is such thing as a man being too deliberate and getting a third strike called on him. In a regular story Joe would have been leaning up against that cigar counter at daylight, waiting for Mary to come to work; but this isn't a regular story—it's the truth.

It was in the spring of 1905 when Joe gave the drummer the squeeze play. Along in September he got up nerve enough to talk with Mary across the counter. The last Western trip we made he shook hands with her and said he hoped he'd see her again. That was a lot for Joe to say.

In 1906 he began to look like a big leaguer off the field. He had some clothes and shirts made to order, quit wearing tan socks with black shoes, and threw away his two-piece red flannels. He bought a diamond from a gambler who was broke and needed the money—four jewelers had to look at it first—but he never wore it. He carried it round in his pocketbook, wrapped up in tissue paper.

Joe warmed up to Mary considerable that season. Once he almost asked her to go to a show with him. He told her all about the quarter section he was buying out West, how much it would cost to get water on the land, and how many crops of alfalfa he figured it would yield. Whenever we were in Chicago, if he wasn't hanging round the cigar counter he was off in a corner somewhere, pretending to read the newspapers, but really watching every move Mary made.

I teased Mary about him a little bit, but I never got much of a rise out of her.

"You let him alone, Chief. It's a real treat to know one man who means everything he says.

"Yes; but he never says anything."
"He says enough. By the way, have you noticed how much better he looks since he's been paying some attention to his clothes?

Mary needn't have taken the credit for that. We all had a hand in it. It's no boost for a big-league club to have

Know the Jhow Was Over-and Didn't Care Either

a star player who might easily be mistaken for a farmer dressed up in his Sunday clothes. The boys had been instructing Joe-teaching him how to tie four-in-hands, and all that sort of thing.

At the gait he was traveling Joe might have come to an understanding with Mary along about the year 1942; but Father Time and another man cut in on his play and balled

Everybody knows what happens to infielders. They last anywhere from three to seven years, according to how old they are when you get 'em, and then their speed begins to When they quit covering as much ground as they used to and sharp-hit balls get by 'em without even a how-de-do? and when they can't beat out their own infield taps, the manager begins to look round for new blood.

Joe had four good years with us and the fifth season he began to slip a little. He was thirty-two then, which is quite an age for an infielder; and altogether he'd been playing baseball for twelve years. He was due, as we say. His fielding took a slump, his batting fell off about thirty points, he dropped away in stolen bases, and the whole machinery of the infield felt his slowing up and suffered. He was a heady ball player; he knew more about the fine points of the game than ever in his life; but he was a fraction of a second slower than he used to be, and in the big league the fraction of a second makes all the difference in the world.

It's all in the game, I know, and only the fastest and best men can hope to stay at the top; but to me the gradual slowing up of a great ball player is a tragedy. At first he won't admit it, even to himself. He tries to believe that it's nothing more than a temporary slump-something that will leave him in a few days. He doesn't think the manager has noticed it, but for fear that he has be works harder-tries harder; but it's no use. The best he's got left isn't quite good enough. When he gets overanxious and takes to fighting the ball and swinging at bad ones he has reached the last stage.

Some day he overhears a snatch of conversation in the clubhouse-something it wasn't meant that he should hear—or he picks up a newspaper and there it is, with a red headline on it. The poor devil hasn't been fooling any one but himself. His next stop is the American Association or the International, and after that it's a question: "Where do you go from here?" Cold blooded? Maybe; but it's

That season we closed at home. After the last game, when the skylarking was over and most of the boys had left the clubhouse, Joe came in from the locker room. I remember he had a key ring in his hands, and all the time he was talking to me he kept taking off his locker key and putting it back on the ring again, as though it was some kid's puzzle he was working with. I knew he wanted to say something and didn't quite know how to go about it. I hadn't opened my mouth to him about the way he was slowing up, for I could see he knew it better than I did, "Chief," said he, after we had talked about the

and the World's Series, and a dozen other subject

you'd better take a look round and get another second baseman. I've been going rotten lately."

Well, you could have knocked me down with a toothpick! Usually a man who is about through has forty alibis and he's always going to play the game of his life-next season. Joe put it up to me, cold turkey, and I didn't know what to say to him. That was Joe's style-telling you what he was thinking about without putting any frills on it. As a matter of fact I had already arranged to pick up a few promising recruit infielders, but I didn't want to tell

Joe so.

"Things have been breaking bad for you," says I, stalling him along. "Take a good rest this winter. You'll be all right in the spring."

"I don't know," says Joe. "I've been playing ball a long time, Chief. Maybe I'm due."

"Shucks!" says I. "Don't let it bother you."

"Just as you say"—and he put the key ring back in his

pocket-"Just as you say, Chief-only I thought it was up to me to tell you."

THE next spring at the training camp I picked up Tom Roche, a second baseman from the Southern Association. He wasn't a Bancroft by any manner of means, nor yet a Dabney; but he was young, fast, aggressive, and not entirely solid ivory above the ears. There's a chance for a kid if he can be taught that he doesn't know all the baseball there is, and Tom was willing to learn. Personally he didn't make much of a hit with me, but I found out a long time ago that I couldn't build a winning ball club on my own likes and dislikes. I'd sign the meanest man in the country if I thought he could help us win a pennant.

I hoped I wouldn't need Roche, but I wanted to have him handy in case Joe got any worse. It looked like a close fight in the first division and I wanted Joe's baseball instinct in there behind the young pitchers, even if I had to sacrifice a little speed to get it. Joe knew what was going on, of course; and how that fellow did work! He took off weight that had been on him for ten years, and he had the rubber kneading and pounding his legs for an hour every night. If sweating and massaging could have given him back his speed Joe would have been a lightning flash that season.

He didn't like Roche any better than I did, but he let the boy alone and gave him every chance to make good on his merits. Often the recruit who is being tried out for an old-timer's job has a pretty poor time of it. It's an unwritten law that a veteran has a right to hang on to his job tooth and toenail, as the saying is; and Roche knew this and expected trouble with Joe. Tom had a chip on

his shoulder all the while we were down South, but Joe simply ignored him and went on about his own business. On the train bound North for the beginning of the season Joe spoke to me about Roche for the first time:

"I see you took my tip and got a second baseman."

"He might come in handy," I says.

"Well," says Joe, "if that fellow is a better ball player than I am he's welcome to the job." There was quite a silence after that remark and then Joe closed the incident. "But he ain't!" says he.

We had warm weather for the opening of the league season, which was lucky for Joe, and he started off at a fairly fast clip. He wasn't the old Bancroft by quite 1 considerable, but he was plenty good enough to keep Tom Roche mumbling on the bench.

On the first Western trip I had a long confidential chat with Mary. I had heard the Gamecocks were fighting among themselves and that some of the outfielders had even been accused of laying down behind certain pitchers. and I knew Mary would have the straight of it. While we were talking Joe Bancroft came along.

"Hello, Mary!" said he. "Gee, it's good to see you again! How have you been?"

"Just about the same, Joe. I don't change much. And (Continued on Page 53)

# HOW PLAYS ARE BORN

O KNOW how plays are born rather than how plays are written is the quickest way of understanding that look on life which is indispensable to successful playwriting. Behind it always is the instinct expressed of old and still symbolized by the comic mask-to report the actions of men and women; but to do it in such a way that the world sees itself whitewashed of its ugliness, and tired children-so-called men and women-get relief from real life.

Tons of words are annually written and spoken on How to Write a Play; but it is not the How-it is the What of playwriting that should be mastered first. The trouble with the average How is that it is no more than it pretends to be. It tells how to cook the rabbit after he is caught. Granted that it is important for the huntsman to be rightly equipped with gun, ammunition and marksmanship, what he really wants to know is, where's the What?

Technic in playwriting is simply individuality. That is the reason why nobody can teach it and nobody can acquire it by rote. One man's technic is another man's poison. There

is no one and all-sufficient technic of the drama. That structure which is truest to the plot in hand, resulting in the least amount of waste between thought and expression, is the best technic.

To the practical playwright, writing and rewriting his material are the least of his labors. It is not necessary to warn him not to pad out an insufficient main plot by the introduction of a weaker subplot; to avoid stage asides, empty stages, superfluous butlers, dialogue that does not send the story forward; and to observe the necessity of conflict of characters or ideas, and similar laws.

It is the conception and birth of the basic idea of a play ne strives for. Once he gets his inspiration, the making of the play consists in thinking out its development from the fundamental idea. Pen may never be put to paper until the play has acted itself out in the playwright's mind. Then writing becomes the mere recording of a play already born.

Twelve years ago J. M. Barrie made an incident in Scottish life, which he had actually witnessed in Kirriemuir, into a one-act play. A young Scotsman was so ambitious for learning that every night he would break into the house of a parvenu neighbor and steal three hours' use of the books in the library. At the end of his studies each night he would leave the house—and the books—as he had found them. As a one-act play without a title that character sketch lay in Barrie's desk for six years. Then A. E. W. Mason, Barrie's friend, came up for Parliament.

# By JOHN D. WILLIAMS

The Czar's Ballet Master Teaching Girls the First Steps in the Coronation Ballet at the Athambra Theater

The playwright accompanied the novelist throughout the hustings—not as a speaker, but as a spectator. It was a novel experience for Barrie. He saw in action not only his friend Mason, but Lloyd George. At sight of the member for Merthyr Tydfil haranguing the multitude, with a Welshman's burr, the dramatist suddenly remembered the young Scotsman of his one-act play. The two figures began to blend. The nameless one-act play, six years after being laid away, began to write itself in his mind into a four-act comedy.

During the rest of the electioneering his dramatic instinct was not only seeing but playseeing; for the direct result of Barrie's little trips about the hustings is Lloyd George-or, under another name, John Shand, Member of Parliament for Glasgow, in What Every Woman Knows.

To the scrupulously methodical Pinero such a haphazard method of playwriting would be unthinkable. Pinero gets his fundamental idea or incident, reflects on it for from six to eight months, and writes the play from beginning to end in two months. The pages of a Pinero manuscript, written in longhand, go direct from his desk to the printer. Proofs are made, and these are corrected for errors in spelling and punctuation. The play is then printed and bound in the form of a book for private circulation. Its text is never changed. The play may begin with an abstract idea-English middle-class hypocrisyor, as in the following, a concrete incident.

One morning, during a-walk through the streets of residential London, Sir Arthur Pinero saw a woman, in evident desperation, rush out on the balcory of a flower-decked house in Mayfair. It was clearly her intention to throw herself to the street below; but she was stopped and saved from such a death by two men-one yourg. the other middle-aged-who reached the balcony as quickly as the woman. The three figures soon returned into the house, disappearing from viewbut not from the playwright's thoughts. In that incident Sir Arthur Pinero saw a new outcome of the eternal domestic triangle-a wife committing suicide to escape from the cruelty of a husband and the disloyalty

of a paramour. In London at that time there was a woman celebrated for his beauty and her success in breaking up homes. She has since become Robert Hichens' Bells Donna; but Sir Arthur first employed her to balance dramatically the guilt of a husband who would not forgive the same guilt in his wife—until, in desperation, she killed herself. The playwright even cast for his woman in the case an actress

who strikingly resembled the woman in real life. With this much material assembled, Pinero followed his usual method: Went in for from six to eight months of social like in London, devoting that period to the gathering of material rial, to anything but playwriting-to club life, dinners balls, the usual society treadmill.

Then he suddenly disappeared from London, and for the rest of the year he was secluded in a remote village, out if reach even of his immediate family; but before the year and up Mid-Channel, a play the story of which is the death suicide of a repentant but unforgiven wife, was announced

Every organic play, like any simple sentence, must have a subject and a predicate. This is only to say that ever rightly thought-out play is reducible to a single proposition. The chief figure or protagonist is to a play wind the subject is to a sentence; the action is to a play what the predicate is to a sentence.

For example: in Disraeli, Louis Parker laid emphasis at the subject, the chief figure, Benjamin Disraeli; in Rose mary, on the predicate, the story; in Pomander Walls again on the predicate, the environment-because the germinal idea of the first was a character; of the other two, stories and scenes.

Had not the last-named play first taken root in M. Parker's mind entirely as a scene, it might just as well have been written with its emphasis put on the central character. the old admiral, rather than on his environment; but a

was in the following way that Pomander Walk first occurred to Louis Parker: In 1910 the playwright reached the locality of his home, Kensington, late one night, empty of pocket and very low in spirits. He was returning from the last of the celebrated pageants, some dozen of which he had organized and presented as open-air performances in various parts of historical England.

Great fame, but not even a shadow of financial fortune, accrued to Parker from these pageants.

As he puts it: "What was made at the Warwick Pageant was lost at Bury Saint Edmunds."

Hence, after a long absence he had to return home and there plunge into fresh devices to get free from serious financial straits. His thought as he neared his house in Pembroke Road was: "I must write a play; I have a family awaiting me at home." But where to find the necessary material? How to make even a beginning?

"If I could look beneath the roofs of that row of houses standing before me," the playwright said to himself as he came within sight of Pembroke Road, "I am sure I should find dozens of plays." And on the heels of that thought came the idea: "Why not? Who knows those people better than I? I have been beneath every one of those roofs."

And, with that, Mr. Parker entered his house; hurried to his desk; wrote steadily for three hours, and the following noon delivered to Golding Bright, his play agent, a fifteen-page scenario of a play to be called Pomander Walk. Two days later George Tyler, the manager, then in London seeking plays, gave Mr. Parker, through Mr. Bright, a check for two thousand dollars for the scenario.

check for two thousand dollars for the scenario.

"Directly I knew it was to be produced," says Mr.
Parker, "the play practically wrote itself from my original scenario."

Where the greatest emphasis shall be laid, then, in the making of a play is also determined by the character of the idea from which it is born. The coming of that idea is all matter of chance.

Very likely Jove thought it an idea for a play when he irst felt Minerva springing from his brain.

#### Three Kinds of Plays

REPRESENTATIVE contemporary plays, traced to their origins, are divided into three groups:

1—Those that are born of a central figure—man or roman—which, in conflict with environment, reveal charcter and important social ideas, thus generating dramatic r comic situations; for example, Cæsar and Cleopatra, tomance, Lady Windermere's Fan, and so on.

2—Those that are born of important social ideas or leals which, put into practice, generate dramatic or comic tuations and reveal character; like Man and Superman, ruth, As a Man Thinks, The Thief, and so on.

3—Those that are born of dramatic or comic situations hich, when developed, generate dramatic or comic action and reveal character, but no special ideas or ideals; like rizona, Secret Service, The Seven Keys to Baldpate, the Music Master, and so on.

In short, all sound plays are born of the development of character, an idea or a situation. This central character, as or situation comes of reflection—is found in the newspers and magazines, heard in chance conversation, or countered on the streets.

Augustus Thomas, who thrives on a healthy scorn of thnic—his saying is: "The longer I live, the less regard ve I for the so-called technic of the drama"—but who a consummate master in building up in his own way

dramatic or comic material of almost any origin, once gave me the following set of notes, briefly accounting for the origin of his best-known plays:

"When I started to write Arizona it was only with the main idea to produce a modern and sane melodrama on a Western subject. With personal letters from General Nelson A. Miles I went to the military posts, where I was made at home and was introduced to the neighboring ranchers, whose guest I subsequently became. I spent a couple of months in the district and was impressed by the juxtaposition of these two lives—that is, the ranchman and the soldier; also, by the points of contrast between them as well as those of contact. Most of the people were young and romantic; when not so they were middle-aged and vigorous.

"The character element was there plentifully—the story grew of itself. For some time after, I was at a loss for a sufficient reason to have the military active, as I needed them. One morning the papers reported the Maine as having been sunk in Havana Harbor; I promptly invented the Spanish War and raised a company of Arizona volunteers. The United States Government and General Leonard Wood stole my idea before I could get it into print; but that was the genesis of my piece.

"It is a theory of mine that one of the chief tasks of the dramatist is to know what will interest people a year from now—that is to say, when his proposed play shall be launched. Some three years ago I said a good play should be written on the relation of the Jew to the life about him in America. I had no intention then of writing such a play myself. Several plays with Jewish subjects followed; but it seemed to me they had failed to get the relation I had noted—to show the Jews charitable, high-minded and ethically conscious, as I know them to be.

"These plays had also failed to note the connection of the early Jewish law with our own modern code. It was a wish to depict this social relation of the Jew, and to show the value of his early and persisting standard of morals, that made me write As a Man Thinks. The starting point there, as you note, was an idea and not a situation. The process was to select representative types—let them live together in one's mind and work out their own story, with such supervising hints as a dramatist would inevitably give.

"You ask me about The Witching Hour. The nucleus of that was written in a one-act form twenty-two years ago, and after I had had some business relationship with Washington Irving Bishop, the thought reader, and some knowledge of his telepathic power. A. M. Palmer, for whom the play was written, felt that the public knew too little of the subject; and I guess he was right, because even after the four-act form of the play was produced, under the title of The Witching Hour, an authority so eminent as our materialistic friend, Professor Münsterberg, denied that any such thing as telepathy existed. The preponderance of testimony, however, was on the other side, having such advocates as William James, Sir Oliver Lodge, and others; and besides, I had my own knowledge of the matter. There again an idea was the central thing."

Probably nine out of ten plays devoted principally to action owe their origins to the columns of newspapers. A Doll's House, for example, was born of a newspaper account of a wife who was arrested for forging a check in order to obtain money to repaper the walls of her sitting room.

William Gillette, bored to weariness from playing Sherlock Holmes season after season, one morning opened a copy of the New York Times and caught sight of a cabled dispatch from Russia. The item occupied exactly two inches on an inside page. It told of the escape of three spies from Siberia. The men had broken into a signal station, which stood alone by the railroad tracks. Two of the spies had chloroformed the telegrapher, while the third, himself a telegrapher, dispatched an order over the wires for a special locomotive. With its arrival all three, passing themselves off as linemen, rode away at top speed for the nearest boundary.

Now the one point in the item that fascinated Gillette was the fact that one of the spies, a prisoner in the enemy's country, was a telegrapher. In itself that was a dramatic nugget. At once there was a fresh interest in life for the playwright. A play was born and began to develop the moment he recognized the dramatic essences in that single situation.

Gillette went on a tour from New York to San Francisco, performing Sherlock Holmes in public; but by himself, during hours of secluded, silent reflection, it was the play with the telegraph scene that he was really acting.

June came, and not a line had yet been written of a play that had been constantly building itself in its author's mind since October. The tour ended and the company returned East, but without Gillette. Nothing was heard from him by anybody for seven weeks.

At the end of that period, however, he boarded a train in a suburb of Los Angeles, carrying the completed manuscript of Secret Service. In less than two months of playwriting its author had recorded nine months of playthinking. That was a play beginning with a single concrete incident, out of which naturally developed rapid, logical and picturesque action.

#### Plots From the News Columns

THE news column of the daily papers is a rich field for such material; but the vein does not always develop gold. About six years ago the late Clyde Fitch had three plays going in as many theaters on Broadway. They were called Truth, The Happy Marriage and The Woman in the Case. The last is worth mentioning as an example of what not

to do with a good plot found in a newspaper.

The Woman in the Case is the story of a wife's loyalty to her husband, who has been convicted of poisoning a friend, a member of his club, and is up for a second trial; but there was another figure, a woman of the half-world—The Woman in the Case. She had been loved by the murdered man. The accused had tried to undermine her influence over her lover. In revenge she became the star witness for the prosecution. She implied that the husband had been jealous. All circumstantial evidence pointed to the husband's guilt, but the wife was eloquent in her belief in his innocence. Her loyalty knew no bounds. Her

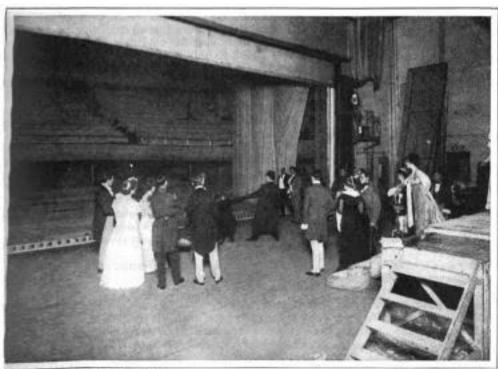

presence at the Tombs was constant.

Of course The Woman in the Case was the Molineux trial, which was then filling the newspapers. The names of the principals were changed and the character of the husband was somewhat ennobled to allow for a happy ending: but he was acquitted in the theater, just as he

subsequently was in court, and for the same reasons.

In short, a celebrated local case of absorbing interest to the public was transcribed by Fitch's pen until it fitted the limitations of the stage instead of being translated through his imagination and given an extra social significance by the stage. A real local event of tragic importance was

PROTO, BY BROWN BROTHBYS, NEW YORK O

A Half-Dress Rehearsal

# THE LAST ENTERPRISE

THEN the San Francisco earthquake had ended its forty-eight seconds of diabolic dancing, "Judge" Harris, in one of the police-station cells of the City Hall's basement, peered out of the folded arms in which he

had hidden his bald pate and saw before him a good breach in the wall. Without too much hesitation he walked through that breach to the sidewalk and stood free beneath the morning sky.

He had gotten into the cell through a long course of debauch alcoholic, begun many years before with a sorrow so old he could not remember it. This time even his legendary frock coat, his extraordinary beaver, and his reputation on the streets of Frisco as the last of the characters left by a departed romantic period had failed to save him. But the elements were with him. Years of gradual slipping had put him in; a few seconds of cataclysm had taken him out. He turned his blinking eyes and his inflamed nose to the rising sun in supreme inquiry.

The sun was rising strangely, as though

behind a pane of cracked glass. It danced; it turned; it was very red; it was dull and molten. Finally the judge diagnosed this behavior—the city was burning. He shuffled on downtown to see it burn.

He saw it burn for three days. He lingered on the edge of the fiery sea, backing tranquilly before its steady advance, removing before its tide his extraordinary frock coat, his incredible beaver, his contemplative stupor; and standing at a corner now and then, legs apart, epic, he answered the conflagration's flaunting with the flame of

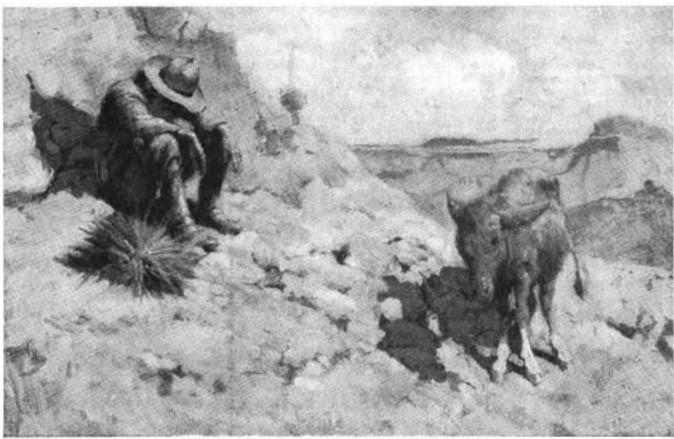

Then the fire ended. He found himself camped among ruins, by the trickle of an old waterpipe, and very happy; for his city now was different from the city it had been, was different from any city that ever had been. He had sensed the change even while it was still burning. Accosting then, with a muttered request, a man in an alley, he had been astonished to see the stranger empty the contents of his purse on his palm and count out to him exactly one-half-in this case one dollar and seventy-five cents. A little later, when he asked bread of a woman, she gave him precisely one-half of the loaf she bore under her arm.

This blessed condition was continuing; the city had become a city in which every one gave a moiety of what he had to every one else. Also, there were lines in which one took one's place; and, moving forward little step after little step, one came finally to an important individual with a red cross on his sleeve who gave one potatoes, beans, bacon, flour and pyramids of corned beef. Once, getting in the wrong line, the judge had even been offered a house.

It was a very little house and it carried with it the obligation of living in one of the organized refugee camps. The judge refused it; he preferred his own camp. This was in the ruins. A remnant of brick wall gave shade. Other bricks had fallen amiably into the shape of a very good fire trench. A broken pipe trickled like a spring; lush grass was already growing round it. Making his coffee and cooking his bacon and flapjacks, the judge felt long-gone efficiencies stir deliciously within him-floppings of pancakes, crispings of bacon, coaxings of biscuits to flaky embonpoint-and he was thrown back forty years to the time when, young, he "bached" it on the placers of Coyote Flat; to that time when something had happened—his old head could not quite remember what-which had sapped his fibers and had started him on the long downward path.

He was thus giving promise of ending his days in idyllic ease when an accident threw him back into the fields of endeavor. This accident was a small accident. The judge one morning again took a place in the wrong line. Arriving at its head he found himself facing, instead of the flour and bacon he needed, a huge heap of clothing.

# By James Hopper

"You Jee, Nicodemus, It Isn't the Custom. It Isn't Done"

The judge's capacity for refusing was not large; he did not turn away. A kind, round lady was distributing. In a moment she put in his arms a very respectable suit of black, with necktie and socks to match; but by this time his eyes were so very wistful on something else that she pivoted to see. The judge was looking hungrily and long-ingly at a shirt. She had been wondering earlier who could have sent in those shirts and what in the world she should do with them, for they were flannel shirts such as had won freedom and reconstruction for Italy, and many tender glances on the Fourth of July for the stalwart members of Exempt Company Number One, Sag Harbor. She did not know that forty years ago, on the placers of Coyote Flat, the judge had worn just such a red flannel shirt.

Lady, please; may I have that shirt!"

"Why, certainly, my good man."

The good man, receiving the red shirt, returned the black coat.

"But you can have the coat, too, my good man."

"I don't want the coat. Just the shirt. Say, lady, may have these overalls?"

"Certainly, my good man."

Now his mouth was open and the yearning in his eyes was far beyond that which the shirt had drawn. He had seen a mountain of boots-boots accordion-plaited at the ankle, with two unashamed loop-straps at the sides.

"If I could have boots like that, madam!" He was given the boots. "Now a belt?" he murmured. "And a sombrero"-when he had obtained the belt.

He left, holding the garments in his arms with the gesture of a mother holding her baby, and back in his camp, behind a ruined wall, put them on immediately. The shirt was open on the old ropy throat; the belt was tight about the sunken abdomen; the overalls were tucked within the boots, and there was a tilt to the sombrero. He stamped about weakly at first, then with what might have passed as rising strength. And with this act the vague fermentation that had been going on within him came to a clear result. He saw with abrupt vividness the placers of Coyote Flat, where he had mined forty years before, the pines, the swarm of men, the noisy camp with its frail cabins, the booming flumes; and sitting down, his old head in his hands, be began to consider seriously a project that for years had been tormenting him dimly.

It was to him a perfectly simple and good plan, and one certain of success. When he had thought of it ten years before, his heart had almost knocked him down with its beating, and he had thought his fortune surely made. Yet he had never succeeded in interesting the necessary capital. It was generally in saloons that he tried to do this. To any one who had been a little kind to him, who had allowed him

to sneak into a general Come-boys-this-is-on-me line-up. the judge in gratitude would try to unfold the magnificence of his embryo enterprise. He would take him to the end at the bar and would mumble in his ear; but the chosen one

never listened to the

At a certain moment he always raised his head abruptly, disctangled himself and laughed loud. Thesh censed laughing gave the judge a curious glance, and ever after ward seemed just a bit afraid of him.

The judge, head in hands, thought nov of these many rebufs.

"What I need is a grubstake," he mm

The next day he appeared before a committee of leading citzens which was doing out loan funds to mer seeking rehabilitation Being leading citizen they had never met the judge in the places where he had sought capital, and now the experience of years caused him to be discreet.

He did not disclose his true intentions. He asked more modestly for a stake that would enable him to start a

vegetable garden on the outskirts of the city. "A place to grow cabbages and things," he described it.

That forty-eight-second dreadful dancing which the net.

of this committee had suffered a few weeks before had left them a little more indulgent and skeptic and huncros than they had ever been. They staked the judge and in cabbages. The next day he left the city on his way to his splendid enterprise.

It did not occur to him to take the train, for he was doing things as he would have done them forty years before. He embarked on an old river steamer, which began to churt the waters with its wheel tail, slowly crossed the bay it black profile against the setting sun, and entered a rise. Up this river, winding along interminable sloughs, it coughed all night. The judge, who to economize had taken no cabin, lay wrapped in his blanket on the upper deca He did not sleep. The boat coughed, coughed, coughed, churned, churned; sidled up to a low bank and sidled off again, its cargo increased by a sack of potaton or a crate of strawberries. And the judge remembered the days when such steamers came swiftly down the nine. splendid with lights, noisy with the clicking of chips at the loud exhibaration of men down from the placers will gold dust in their pockets, gold dust to stream on the roulette tables, and gold dust in the purser's safe in a longer orgy in Frisco.

At sunrise the spires of a city appeared across the tale. and an hour later the boat tied up at its very heart. To judge scrambled out, in haste to outfit. He wore his book his shirt, his sombrero; his blanket lay across his back Early loafers viewed him with stupor.

His first search was among horse merchants and him stables, and it took him some time to accept the fact in what he was seeking to buy was no longer an object? trade among men. Noon found him on the outskirts of the town, following a bevy of small boys in search of a certain Bob, who "had one." Bob, when found, did have one are was willing to sell. And the judge bought a little tan-back curly-haired donkey, with innocent eyes and a philosophic ical disposition.

This the judge led back to the center of the town, to the

main street and the harness shop.

At the harness shop he bought a packsaddle, which forthwith girthed on the burro, two big saddlebags, Ecc. long cotton pack rope, with a hair cinch. The burn, and accountered, was then moved down the street to the grow's where his bags were filled with provisions-flour, have coffee, baking powder, salt and sugar. At the dryped store a thick double blanket was thrown over the 3th The last stationing was before the hardware store. By including

ck the judge was ready. By five he was out of town, at hing sun-white road that stretched toward the blue his of the distant sierra.

The little donkey trotted behind him, vaguely like a tirtle beneath the carapace of its pack. From the knot of the faultless diamond hitch, cooking utensils dangled; fore and aft in the crotch of the saddle a pick and a shovel rose high above a wide, shining white pan. And the farmers along the way watched, with open mouths, the old man pass, with his white beard, his boots, his red shirt, his sombrero, his little pack animal, with pick, shovel and pan; and at the sight they felt stirring within them old memories of past romance.

He camped, as night came on, near a farm. Small boys in ambush behind the willows watched him eat, silhouetted against the fire, his supper of fiapjacks and crisped bacon; later the farmer himself called, curious to engage him in talk; but, seized with a fear of betraying his precious plans, the judge answered only with ill-natured gruntings and in their presence rolled himself in his blanket to sleep.

He was off again early the next morning. For three days to trudged stubbornly across a plain in the glare of the sun. Then the ground rose under his feet to foothills. It was till early in the year; the grass was green; there were mall oaks, and brooks that ran clear. His purpose now eemed to fade at times, to leave him altogether. He pitered a good deal. Once he passed a whole day playing with polliwogs in a green pool. Another afternoon slipped way while he wasted all of his ammunition shooting with its big six-shooter at a tin against a tree. He would stretch in his back for hours, his cheek caressed by a blade of rass, his eyes on the sky. A second childhood was coming to him like a grace.

Then, frowning, he would remember, and would push on ith trembling energy; thus fitfully he rose into the heart of he hills. There came a long, steep grade, which wound him pward for a whole day; and when the road flattened gain it was stretching high through the pines, and a new igilance had come upon him. The sun set, the moon rose. It went on with long strides, prodding the little burro eforce him, while his old black eyes searched to the right, the left, for faded recollections of old landmarks. The had, a tollpike, had been little traveled so far this year; at after a while he turned off from it into one still less equented—one of which, in fact, the carpet of grass, the reaching bramble and the absence of ruts told of long bandlonment.

He followed this indistinct way through the pines, the irro trotting before him. Then the pines ceased to be id he was on the edge of a wide and denuded flat. His lart beat strongly; he halted and stood looking, immobile. It was a ravaged stretch of land; the moon poured its cusmition upon it and made it livid. There was not a see and not a blade of grass. And not only was there it a stree and not a blade of grass, but there was no earth.

he earth had been ug, scratched, rap-ed, swept, hyauli cked away to its ost minute grain; it us ass though over the e of this landscape ne monstrous and alo-us deity had ured vitriol, corrodtits fairness down the bone; and only granite bedrock nained, this itself graved in miniature nons and frozen ves, sharp-crested. The judge closed his ss; and instantly he v the land as it had m when he had been e, as it had been re than forty years ore. Over the flat, ndreds of men ırmed, dressed as he s; bent at the waist, h pick and shove y attacked fiercely soil; their picks at up and down ftly; they were like

chanical toys.

Ie opened his eyes

v, however, and

ling them with his

ched for the first

with a doubt as

the possibilities of

enterprise. And

he saw that for

which he was searching, that which was assurance of success. Over there in the dim opalescence of the moon rode something like a warship on waves of granite. A more fixed contemplation resolved it into a hillock with a flat top. It stood there in the center of the corroded devastation, an isle intact; a bit of the original landscape left there, spared through some mysterious caprice of the hordes which, all about, with the thoroughness of ants and the violence of dynamite, had gutted the land for its gold.

The judge spoke aloud in the stillness. "It is still here," be said.

But his emotion demanded an audience. "It is still here, Nicodemus!" he repeated, addressing the little ass.

Nicodemus licked up a blade of grass, but otherwise was unmoved.

"Our fortune is made, Nicodemus!"

Nicodemus rubbed his pack pensively against the last small pine.

The judge clucked the little donkey on. He did not drive the animal toward the mesa that had so interested him, however, but along the faint traces of the road skirting the flat to the right, leaving the mesa, mysterious island in the liquidity of the moon, to the left.

"We're going to see how the old camp has stood it, Nicodemus."

The burro's small boofs drummed on the hard pan; the nails of his boot crunched on the granite. The noise they thus made stirred him with an uneasy sense of desecration; throwing long side glances he tried to walk on tiptoe and was glad when, with a little leap, the indistinct road came to fertile ground again. A minute later the way became the main street of a village.

It was a strange village. The street, long neglected, scooped by the rains, was a gulch. On both banks of the gulch the little houses rose. They were atilt, one to the left, another to the right, as though drunken or as if suddenly petrified in the middle of a mad dance; and some seemed to be bending toward the lone man passing and others to draw back in scandal.

From the yawning doors not a light came and not a sound; in the whole village there was not the bark of a dog or the passing of a cat.

"Coyote Flat, Nicodemus," said the judge with the tone of a cicerone.

He went on down the main street, pushing the little donkey ahead, until he came to a cabin larger than the others and with a false front that made its one story look two. This he entered.

He could see the stars through a rent roof; and his feet were in a soft dust made of the earth that had been beneath the floor. The room was large, and to his right, massive and well-preserved inside that frail and ruined house, possessed of an indestructibility like that of an altar, a long piece of furniture stretched a few feet from the wall. He moved toward this sort of counter, leaned one elbow on it,

turned toward the center of the room and, with a large, loose, amiable herding gesture of his left arm, shouted:

"Come on, everybody! It's on me this time!"

No one answered. He pounded the counter impatiently.

"Come! The poison is on me!"

Then the sound of his voice and the silence that answered frightened him abruptly. He stumbled toward the door, out on the street again.

"Nicodemus, take off your hat! This is the Golden Eagle Hotel and the Golden Eagle Hotel bar."

He went on a little farther and stopped by a cabin that was altogether down, a pile of loose boards and shakes on the ground.

"Nicodemus, here's firewood. We camp right here, Nicodemus."

When he had unpacked the burro and had lit his fire he went off with his pail behind the houses—the deserted camp was flat as cardboard scenery—slid out of sight, and a little later returned grunting, the pail full of cool, clear water. The burro was already at his meal, hopping about with hobbled ankles and cropping bunch grass between boards and shakes. The judge cooked, ate, rolled up by the fire and went to sleep.

He woke twice. The first time he remained motionless on his back, not daring to let his eyes roam. A great silence lay with the moon on the deserted and ruined camp, and the mountain cold pressed on him as though it were a hand. A deep sigh coming from very near raised abruptly his dim dread to a passion of fear. Then that which had so hurt him now reassured him—little Nicodemus came sauntering by, munching, carelessly treading possible terrors under his small hoofs. It was he who had sighed, waking half frozen.

And the second time the judge did not know whether he was really awake. The moon was sinking behind the trees and in the thickening darkness the camp seemed repaired and restored. What had been down was up; holes in roofs and walls were filled. And what thus stood repaired seemed of another stuff, less material, than the more solid parts that had resisted time. The doors were all closed; the windows were all closed; the judge fancied he heard behind these closed doors and windows the measured breathing of hundreds of men. From the Golden Eagle Hotel came a cry —

An owl flew by, velvety. Nicodemus shook himself hard by; and the judge, sitting up with prickling hair, saw the little animal hop right through one of the restored walls. As though this had been a signal, a reassertion of things as they are, suddenly all the holes became holes again, the patches in walls disappeared, the semimaterial ghostly fabric became air—and the camp was a ruin again.

When in the morning the judge woke he found the devastation about him more eloquent in that light. The shakes with which roofs and walls had been made had curled to the heat and cold of successive seasons, and in agonized con-

tortions had torn themselves from their nails; there were great holes in walls and roofs; many cabins were down altogether; one or two only were apparently intact.

The judge, with shuffling steps as though all his late energy had gone out of him, as though this had been a last flare to be followed by the final torpor of age, pottered about the ruins. He seemed to have forgotten altogether his superb and urgent enterprise. He stood on piles of shuffled lumber, picked up now and then an old corroded pot, a pan; he entered cabins and, before some rude fireplace still sooted with black, nodded with what might have been an old man's wisdom or an old man's weakness; he leaned on the bar of the Golden Eagle Hotel, that bar so humorously solid and permanent in the ruined flimsiness surrounding it, and seemed to ponder a long time.

His wanderings, though aimless in appearance, were in fact the following of a thin

In the Ghost Door of the Vanished Cabin a Young Woman Stood

thread of memory which stretched before him like a spider's web, tenuous, elusive, visible only in certain plays of light, lost altogether at times; then again before him. He zigzagged, turned, twisted, climbed mounds of lumber, went to the right, to the left. Once he thought he had found his old cabin. There was left only a piece of one wall; but against that piece his bunk still stood, the bunk he had occupied more than forty years before. Like a child playing a game he got into it and lay on his back, looking up through his old eyelids at the sun. It was very quiet and peaceful here. "Good old bunk!"

He was discovering, however, that this was not the end of his search; that the dim urge within him stirred still unsatisfied; that it was still pushing him on, he knew not where—except that somehow it had to do with pink calico. Yes, pink calico—that was it. He rose and began his wandering again, following the impalpable spider

thread. And then, suddenly, he had found!

He knew that he had found because of the peace that had come to him, as though forever an anchor had been dropped; but he did not know just what it was he had found. He was standing before a spot where a cabin had been; but of that cabin there remained only débris between the four corner posts, still standing upright, standing there upright as though they meant something.

Suddenly there came to the judge a vision at once precise and incomplete—a perfect picture, but detached from any ambience that might explain it. In the ghost door of the vanished cabin a young woman stood—a young woman of fresh, clean and buxom charm, flashing blue of eye and rose of cheek. Her dress was of pink calico; the sleeves of it were rolled up; and the bare arms were powdered with flour, as though a moment ago she had been kneading.

In her skirt a little girl hid, blue of eye and yellow of hair.

The judge saw, but did not interpret. He saw without knowing just what he saw. This picture was a projection of something that had existed forty years before; but nothing that had been with it came to explain it. He puzzled; but his old brain refused to tell him. Then a sadness pinched his heart and he found himself weeping. Hot drops as of liquid lead were on his hand; he looked at them, astounded.

As though a curtain had been rung down, the vision ceased. The judge went on pottering about the ruins aimlessly.

In the morning, though, the judge woke tingling with renewed vigor. He dispatched his breakfast hastily, for a fear was now on him. He feared that his eyes had not seen aright on the night of his arrival; or that since then something disastrous had happened. It was with a shout that, debouching on the desolate flat, almost at a run behind trotting Nicodemus, he saw, affoat like an island in the morning light's liquid gold, the hillock in which lay his certitude of splendid wealth. It stood there intact in the center of a corroded devastation as though there hung above it a taboo, a curse, or a sanctity. All about it the land had been ravaged. Two generations of miners had passed here—the judge's own, the argonauts who, with pick and shovel, had scraped what they could; then that which, with terrible hydraulic streams, had washed away what remained as with acid. And both had spared that little half-acre which, as the level about it had descended to bedrock, gradually had risen a little toward heaven.

It was a small hillock now with a flat top, a diminutive of those messs one sees in the Arizona desert; and the judge viewed it with tenderness.

"She's there, Nicodemus—she's there! She hasn't budged!

"I shouldn't wonder if there were one like it in every old deserted camp of California, Nicodemus!

He Remembered Now - Ah, He Remembered!

"The Deserted Camp Exploration and Final Exploitation Company, Limited—how would that sound—eh, Nicodemus?

"Or shall we keep it all to ourselves?"

The burro not answering, he clucked it on toward the mesa. He observed it narrowly as he neared. It had not been touched. The walls were sheer with the exception of a little crumbling as though the miners, approaching like a surf from all sides, had been abruptly stopped by a word said up there at the top, or a gesture. When still nearer he scanned the geological structure cross-sectioned before him.

At the surface was a thin layer of brown earth traversed by the roots of grass. Below was sand; then pebbles increasing in size to boulders at the bottom. And among these boulders, on the bedrock, was black sand. He nodded sagely, skirted the mesa until he was on the side opposite that by which he had come, on the side hidden from the road that once had been, and, unpacking his implements, without hesitation he attacked its flanks with pick and shovel.

When he had thus secured a saddlebagful of the black sand he went down to the river that skirted the flat, taking along his pan. He was gone an hour. When he returned he placed beneath the nose of Nicodemus a small, open buckskin bag. Nicodemus, startled, breathed in noisily, and the old man broke out in a cackle:

"That's gold you have on your nose, Nicodemus! Gold dust! There's about ten thousand dollars' worth in that little hill. We can get half of it this summer."

He was silent, pensive. "And we'll come back next spring, Nicodemus. Our fortune is made. At last!

"The Deserted Camp Exploration and Final Exploitation Company, Limited," he added solemnly after a silence. Then, spitting in his hands, he raised the pick at the end

Then, spitting in his hands, he raised the pick at the end of his lean, trembling arms and brought it down against the side of the hillock. It bit weakly; from its point a little crumble of earth ran down to his shoes.

"We're off, Nicodemus!"

He worked until sundown; then with Nicodemus he returned to his camp among the ruined cabins, the boards and the shakes; and in the morning, with the rising sun prickling his back, was again at the mesa with pick and shovel. When Saturday came he did not dig, but spent the day transferring the excavated sand and rubble, with the aid of Nicodemus, to the banks of the stream. And all Sunday he squatted by the water's edge and rocked and panned. When, Sunday night, he regained camp he held tight in his right hand a little buckskin bag full of gold dust. He was too tired to cook, and munched some cold biscuits; but immediately afterward he was up, searching about the ruined camp.

When he had found a cabin that was altogether down in a loose shuffle of lumber he lifted several boards, introduced his long arm beneath them, laid the little buckskin bag carefully on the ground and let the boards fall back on it. Then with a sigh he rolled up in his blanket; but in the middle of the night he was up again and, when he had found his cache, lay long on his side, his arm, underneath the boards, stretching to the little bag, his fages tight about it—until the cold had driven him basi to his bed.

On Monday he was again picking at the mesa. He blows were feeble, but he made this up by the patience of his industry. His mind, much of the time was a vacuity; but all the time in the center of the haze there burned, fixed, a kernel of purpose. And his pick ceaselessly rose and fell, rose and fell, going up slowly and tremblingly at the end of his old, thin arms, descending loosely; its cratched and scratched, and the loosened earth rose about his boots which, beneath the frailty of his body, took on an appearance of great weight, size and solidity as though they had been of bronze. Early on Tuesday he was here again—and Wednesday. Toward the end of the week

here again—and Wednesday. Toward the end of the week he began to move what he had excavated to the hank of the stream. On Sunday he panned and rocked for thirteen hours and, when night had come, deposited in his carbe beneath the boards of the fallen cabin a second fat little buckskin bag of precious dust.

The days now became the beads of a chaplet, slipping one by one. His undertaking possessed him altogether; is gave himself hardly time to eat and to sleep. At peop of dawn he came running up with Nicodemus to the mea wonderful; he dragged away at dark, full of regret. And his success was proving far beyond what he had dramed.

Though his age and his weakness and the primitiveness of his methods were holding him much behind his planning though he had so far merely scratched the sides of the hillock and saw that, instead of two summers, it would take him ten at the same rate to level it, yet he was taking out in gold as much as though the mesa held merely what he had hoped and, a giant, he were demolishing it ten times as fast. It seemed as though the argonauts, who had attacked the flat for gold, in setting out this small hill-acre had reserved unwittingly the richest spot. It ran values beyond what the judge could remember of the lest claims forty years before.

"Why, it's a real pocket—a real pocket, Nicodemus! There's hundreds of thousands in there, Nicodemus! We'll be sliding on velvet, Nic—on velvet!"

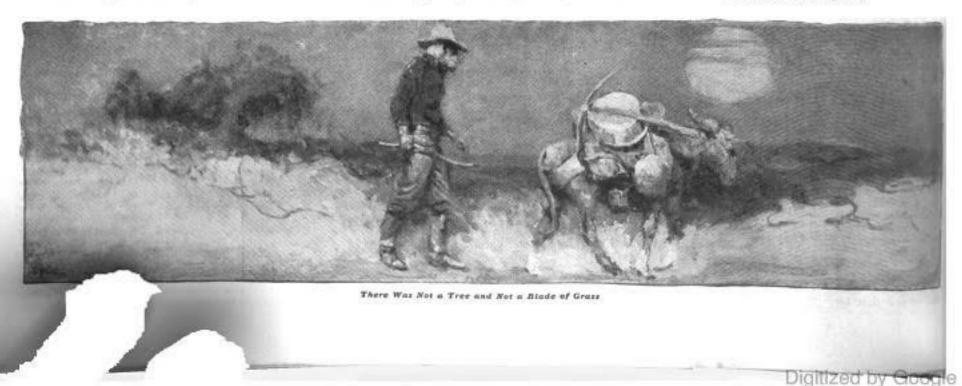

The work, with all its fascination, had its small annoyances. At times in his digging he came on something that gave him pause. He hesitated a while; then using the pick very carefully he freed, little by little, buried object that looked like sticks of bleached, porous wood. He laid them carefully together by his side and, gaining accustomance and assurance by the very act, at length was standing upright reflectively, holding in his hands a round thing, in the posture of the Prince of Denmark in one of Shaksper's famous scenes. His undertaking lost its splendor; he shivered a little in sickish distaste.

This lasted but a moment. His pick, rising, fell again; it bit into soil that he knew held much gold. The days passed one after the other, each full, tasting of duty well done; and in the cache under the planks of the ruined cabin the number of little bags of gold increased, squatted in a line in the half-light, like rotund little Buddhas.

It was then that the fascination exercised on him by the top of the little mesa began to put forth almost irresistible strength. When he worked it was right there above his head—the top of the mesa—very near and yet invisible it beckoned to him all the time, as though up there in the silence it held something to show him or a whisper for his ear. On the other hand, he could not bear the thought of dropping his pick for a moment or ceasing for a second the diligent scratching which was giving him a dignity long lost, which was rehabilitating him, which was giving him gold.

When he came hurrying in the morning he could see it.
the top of the mesa, as long as distance made it indistinct

# THE FAKERS By Samuel G. Blythe

HITTLINGS went to South America on business for a client, and was gone for six months. He told Hicks they would take up the matter of a partnership when he returned. Hicks kept on at his acquaintance-making, securing some business. which Gudger handled for him. He was constantly in the company of Rollins, who expressed great affection and respect for Hicks and belped him in every posable way. Hicks participated in each movement or the betterment of Rextown, was active mough in church affairs o keep himself in good tanding, and essayed the part of prominent citizen. ie wrote regularly to lenator Paxton, making ree comments on the own, the people, his plans nd his prospects. Every ime Hicks' name apeared in the papers he ent a clipping to Paxton. ince he spoke of the hittlings proposition.

"On the broad, general beory that two heads are etter than one, if each is asonably non-osseous," enator Paxton wrote in ply, "I should say the lan is a good one. As political move it has its erits, also, for it stands reason when a law m is composed of two

artners, and has a political slant to it, if one partner is a emocrat and the other is a Republican the harvest will much more complete and satisfactory than it would be both were reaping in the same field. I think you might ell make the experiment, only never trust any person, ommie, in a business deal except me, and do not be too offding with me. Get it all down in black and white and m't let the other man use you half so much as you use e other man. Everything, they say, is fair in love and er, and that may be so. It also is true that everything is dair in politics, so keep your eye on your number conantly, and remember that the only way to be prosperous the future is to have been discreet in the past."

Chittlings was detained and did not get back to Rextown til September. "Let it wait until the first of the year," said to Hicks, and Hicks was glad to do so, for he was tremely busy with politics. County conventions were to held, and Rollins insisted that the Democrats must put a full ticket, from county judge to road superintendent. ere were many conferences at the office of Rollins and cks took part in them all.

As usual it was difficult to get Democrats to take nominans, for the fight was hopeless.

'I've got you slated for prosecuting attorney," Rollins d to Hicks.

'Prosecuting attorney!" Hicks exclaimed. "Isn't there udge to be named?"

'Yes," said Rollins, "but another man has been named that. You take the prosecuting attorney nomination. at will give you an opportunity to go out into the towns i get acquainted with the farmers. It's a county office, 1 know."

licks reluctantly consented.

He was firmly of the opinion that his services to the mocracy of Rextown and the surrounding country ened him to nomination for the highest office within the gift he people at that time, but Rollins had picked an older yer with a war record for the place, and Hicks subsided, without much inward protest.

lnough delegates were rounded up to make a Demotic convention possible, and Rollins called the gathering order at the appointed time. The assemblage, which uded Democrats from all over the county, was a listless , for it faced certain and overwhelming defeat and knew Rollins had asked Hicks to get ready for a speech, and

after the formalities attending the nomination of the ticket were hurried through, Rollins addressed the delegates:

'Fellow Democrats and gentlemen of the convention!" he began, "I now take great pleasure in introducing to you a sterling young Democrat who has recently come to our city, a man who believes in the ultimate triumph of Democratic principles, who holds Thomas Jefferson to be our greatest American, and whom you have just nominated for the important office of prosecuting attorney. Mr. T. Marmaduke Hicks, of Rextown, will now address you."

Tommie had felt he should array himself in his frock coat and wear his high hat, but Rollins told him not to. So he came in a sack coat and soft hat. As Rollins pronounced his name he stepped forward on the stage and bowed. There were a few scattering handclaps. Some of the men in the rear of the hall started to go out.

"Fellow Democrats," Tommie began; "I trust you will bear with me while I give to you my brief message. While these are times of dull despair for our party, I am one who has his face turned toward the morning and I can confidently assert to you that every cloud has a silver lining, that the night is darkest just before the dawn and that there is no lane without a turning. Fellow Democrats, truth is mighty and must prevail. As the poet has it: Truth forever on the scaffold and wrong forever on the throne'; and, as you all know, the minority is always right. These are times of stress. The very foundations of our country are threatened by the insidious underminings of the corrupt influences that have control of the Republican party."

That's the stuff!" shouted Rollins.

Hicks spoke for twenty minutes. He had schooled himself in his piece, had practiced it before his looking glass in his room and knew it by heart. He was full of confidence, threw in every gesture he had ever seen a platform orator use, and ran his voice up and down its register with amazing results. He stamped his foot, waved his clenched fists in the air, and walked from one side of the stage to the other. When he had finished sweat was dripping from his forehead, but his voice continued strong and his peroration could have been heard as far as the city hall.

Two bored reporters watched him with much amusement. As Hicks finished he looked anxiously at the reporters. He had noticed, as he was talking, that they were making no notes of his speech.

"Did you take it down?" he asked anxiously, leaning over to the table where the reporters sat. "I can give you copies of it."

"We've got some of it," fibbed one of them graciously.

The convention adjourned and some of the country delegates congratulated Tommie. One old man said he was glad to find there were still young men who had the courage to fight the forces of corruption in politics and faith to speak what was within them. The papers made only brief mention of the convention, gave the list of nominations and said T. Marmaduke Hicks addressed the delegates. Tommie was incensed when he saw no reports were made of his speech. "But," he consoled himself by thinking, "the time will come when they will print what I have to say on the front page."

Financed by Rollins, who gave him money for livery rigs and for his meals at the country hotels, Tommie traveled all through the county, speaking at schoolhouses and wherever he could get a few people together. It was discouraging work. Most of those who came to hear him were Republicans. They jeered at him.

But he stuck to his job, and by the time the campaign was over could make a resounding speech, full of allusions to the corruption of the Republicans and filled with promise for better days if the Democrats were put in power. He took up the condition of affairs under the Republican prosecuting attorney, charged that official with dereliction of duty, with gross favoritism, with grafting and with about everything else, and promised a clean, capable, honest administration of the office and the relentless prosecution of all criminals, whether of high or low degree, if he were elected.

Also be did his first house-to-house-or rather farm-tofarm-canvassing. He wore his oldest suit of clothes, let his shoes remain unpolished, was hail-fellow-well-met with the farmers, ate with them when he could, was elaborately polite and flattering to the women, took part in prayer meetings in the churches, and descanted continuously on the necessity for getting back to the soil and the rugged honesty of the agriculturist as opposed to the scheming, contriving dishonesty of the city dweller.

He put in the last week of his campaign in the city, where he dressed with scrupulous care, making up as he thought a clean-cut, alert young prosecuting attorney should look. He spoke every night, sometimes on the street corners and once or twice at very small rallies. His opponents took no notice of him, and the papers joshed him a little and reported none of his speeches. The campaign was neither exciting nor interesting, and the outcome was never in doubt. Tommie ran a few votes ahead of the rest of the ticket, but was overwhelmingly beaten.

Rollins told him he had done well. Tommie thought so too. He had learned something about campaigning. Also he had spread the knowledge among the country men that he was a young man of correct deportment, a church member, and that he neither drank nor smoked. He never for a moment let down on his pose of being the friend of the people, and he considered he had sown good seed. Besides, it hadn't cost him anything. Rollins had furnished the money, and Tommie made Mrs. Hungerford deduct for the meals that he missed while he was speaking in the

He had attracted some attention among the lawyers. They talked about him. Chittlings was especially kind in his comment. "It's all right," he said; "if that is the game you are going to play you have got to start it that way. Keep at it and you may win out some day, if a pestilence blows along and kills a few thousand Republicans and passes by the Democrats."

A little law business came to him as the result of his campaign. He was one of the leading figures at a union Thanksgiving celebration, where the Methodists, Baptists and Presbyterians joined in a service on the night before that festival at Tommie's church. He made an address on The Necessity of Brotherly Cooperation, which was pronounced very fine by those who heard it and was mentioned for a quarter of a column or so in the papers. He was active in the Christmas celebration at his church, and a day or two before the end of the year was asked by Chittlings to come up and see him.

"You've had plenty of time to think that proposition over," said Chittlings. "How do you

feel about it?"

"But Mr. Chittlings," Hicks replied, "you never have made a definite proposition as yet."

Well, I'll make one now. I'll take you into partnership, give you twenty-five per cent of the gross receipts and charge no expense to you except rent for one office room; you to bring in all the business you can and I to do the same. I will look after the legal necessities, although you can make the necessary bluff, and you'll continue to play your Democratic game while I take the other end of the politics of the combination. How does that strike you for the first year?"

"I don't relish your continual reference to my playing a game. I am sincere in these matters, Mr. Chittlings."

"So much the better. I always respect sin-cerity, especially when I find it in such large quantities. How does it hit you?'

"What is to be the name and style of the firm?" Chittlings glanced at him in astonishment. "Chittlings & Hicks, of course," he replied.

Tommie looked Chittlings squarely in the eye. "I think Hicks & Chittlings would be more appropriate, provided I enter into this compact with you," he said steadily.

"Wow!" exclaimed Chittlings. "Great aromatic spirits of ammonia!" Then he roared with laughter. "Son," he gasped, "you'll do! You will absolutely do! I'll make that thirty per cent. Come up to-morrow and sign the papers.'

Hicks salved his wounded feelings with the extra five per cent offered by Chittlings, and signed a partnership arrangement for a term of one year, with a privilege of renewal or dissolution

on notice by either partner at the end of the ninth month. He gave up his office and moved down to the suite occupied by Chittlings. The firm's name was put on the door as "Chittlings & Hicks, Attorneys-at-Law," and it was many a day before Hicks could look at it without feeling that by all the merits in the case it should read Hicks & Chittlings. Hicks was much elated over his new office surroundings. He had a good-sized room cut off by a ground-glass partition from the very large room formerly occupied by Chittlings. "Mr. Hicks" was chastely painted on his door. He thought the door should be labeled "Mr. T. Marmaduke Hicks," but Chittlings told him it was much better form to have it read just "Mr. Hicks"—it gave class, he explained. There was a stenographer, the first one Hicks ever had at his disposal, and he dictated reams of letters to that outraged person, many of them letters he never sent and never intended to send. He wanted to impress the stenographer; for no persons were too humble, in the opinion of Hicks, to have brought home to them by word or deed the transcendent abilities of T. Marmaduke Hicks.

THE municipal election to be held in Rextown that spring was unusually important. The street-car company, which operated all the cars in the city, was about to make an application for an extension of its franchise and a renewal on most favorable terms-favorable, that is, to the company. The Chronicle, inspired by Rollins, had opposed any extension unless there should be certain concessions. The Chronicle demanded universal transfers, better cars, improved service and a three-per-cent tax on gross earnings for the benefit of the city. Naturally the street-car company was opposed to all this, vigorously and bitterly opposed.

The street-car company was close to the Republican organization. It controlled the board of aldermen, through Boss Ross' organization, for the aldermen were almost all Republicans. There had been an attempt to shove the franchise matter through the board that was to go out of

\pril, but the Chronicle made such a row about it et-car magnates and the Republican boss uld be as well to wait until a new board was do it then. They were sure they could elect a no matter what the issue was, and would then anchise through in an orderly manner and claim

that the people had spoken on the matter, and they were simply bowing to the will of the voters and taxpayers.

Rollins, who despite his fondness for political letterwriting and his dreaming was a shrewd politician, saw an opportunity here. He had no interest in the streetcar company and hated all the directors and managers thereof, for they were all Republicans. He knew that the people felt—as the people always do-that the street-car company was robbing them, depriving them of accommodations they were entitled to, and he further knew the three-per-cent tax to be paid into the city treasury was a strong inducement for votes against aldermen who would be inclined to grant the franchise extensions without that feature included in them. When it was intimated that the street-car company intended to jam the extended franchise through the old board of aldermen instead of waiting for the new, he promptly let loose a broadside in the Chronicle saying he would go to the courts if they did, enjoin them, and fight

them to the last, inasmuch as the franchise matter properly came within the jurisdiction of the new board, or Rollins held it did, which amounted to the same thing in the circumstances. He had strong popular support for this.

William P. Roscoe, president of the street-car company, william F. Roscoe, president of the street-car company, sought Boss Paddy Ross, of the Republican organization. 
"Paddy," he said, "that old grandstander, Rollins, is making a good deal of a row over the franchise matter." 
"It won't amount to nothin'," assured Ross.

"I don't know about that. The people are all in line to

oppose us at any time or place. I'm afraid we waited too long. We should have jammed it through the present

"Now, Roscoe," counseled Ross, "don't you get cold feet. I told you I will elect a board of aldermen and a mayor that will give you the right to make a powerhouse out of the city hall if you want to, and I'm going to do it. Just leave this to me.'

"But there is a great deal of agitation."

"I know it, and there'll be a lot more before there is any less, but it's the votes on election day that count and I'll have them, don't you worry. I'll pull you through this just as I always have. Let Rollins howl. I'll produce on election day, and I'll produce a set of highbinders for aldermen that will give you Main Street for a pleasure park if I say the word.

Roscoe left. He was nervous. This nervousness increased as Rollins renewed his attacks, and the Chronicle kept pounding. He went to Ross again but was told to sit steady and attend to his street-car business, and all would

Rollins had talked with Hicks about the campaign he was making, and Hicks was enlisted in the fight. Chittlings advised Hicks to keep off for business reasons, but Hicks couldn't and wouldn't. He saw unlimited opportunities for speechmaking in which he could attack the street-car octopus—he had resolved to call it an octopus—and declaim passionately for the rights of the poor, down-trodden workingmen, who were defrauded by being deprived of universal transfers and who had poor service for their hard-earned nickels. He urged Rollins to demand a three-cent fare, but Rollins thought that too radical and refused.

"Hicks," said Rollins, "this is our chance. We have an opening now. If we put up good, clean men, as many of them Democrats as possible, but with a few independents to give the ticket a non-partisan flavor, we can win the whole shooting-match, mayor and all."

"So I think," assented Hicks. "The people will rally to me as their candidate for mayor."

"As their candidate for what?" exclaimed Rollins.

"Their candidate for mayor."

"But you're not going to be their candidate for mayor."
"Why not?" demanded Hicks. "In view of all my sacrifices for the party, I surely am entitled to this small recognition."

You are not," said Rollins firmly. "You are to be the candidate for alderman in the Seventh Ward."
"But ——" began Hicks.

"Oh," Rollins interrupted, "you can speak all over the city. It will be a good chance for you.

Hicks tried several times to convince Rollins he was the logical candidate for mayor. Rollins would not allow it. and when he saw he must take the nomination for aldernus of the Seventh Ward or nothing, Hicks sulkily consented He announced his candidacy for alderman in an intervenin the Chronicle, hastening to the office to get it in print

for fear Rollins might change his mind.

"Going into it, I see," said Chittlings after he had read
the Chronicle interview, in which Hicks had made vigoous denunciations of the street-car octopus. Hicks went quite clear as to what an octopus was, but none the less is accused the street-car company of being one, and of sucking the lifeblood from the poor, downtrodden workingnan, Later he learned about octopi, and cut out the bloodsucking feature, using that only when, for a change, he referred to the company as a vampire, which creature is had been informed, is an artist at blood-sucking.

"I am," Hicks replied.

"Well, good luck; only keep your politics clear from the law business and watch out you don't get your fages burned. Paddy Ross is a very capable citizen, you know." "I am not afraid of Paddy Ross and his benchmen when have the people on my side," declaimed Hicks.

"You may have the people on your side," laughed Chittlings, "but you will have Paddy Ross on your neck, and that will be uncomfortable-for you."

The city conventions were held and Hicks was nominated as the Democratic-reform candidate for alderman from the Seventh Ward. The campaign, which had three weeks to run, began immediately. The two afternoon papers and the Leader, a morning paper, upheld the regular Republican ticket, which was favorable to the street-car company, and pointed out the great benefits that had come to Restown through the liberal, public-spirited policy of the company. how it had millions invested and how it had developed the suburbs by the extension of its lines. Statistics prepared by the company were printed, showing the small per cent of earnings compared with the expenses of operation. Pronises were made of a liberal future policy if the franchise extensions were granted.

Rollins was in his element. For the first time he was fighting with a chance to win. The Chronicle stood stardly behind the Democratic-reform ticket, which was made up of excellent men, and the people—as usual—were in favor of giving the street-car company nothing and of getting free rides if possible.

Hicks and Rollins organized a series of noonday meetings in a vacant store on Main Street, and Hicks and other orators spoke every night in various parts of the city. Hids turned himself loose. He attacked the street-car company from every angle. He spoke eloquently of the wes of the workingman. He pledged himself a hundred times each twenty-four hours to fight for the common people, should he be elected, and he plainly told the street-car company it need expect no favors at his hands. He was in favor of municipal ownership for public utilities, and he dragged in his three-cent-fare idea and was always applauded.

He had an apparent earnestness and sincerity that caught the crowd, and a flow of language that, though it had no argument in it, was denunciatory in the extreme He called the street-car magnates wolves and plutocrata with no other plan than to bloat their fortunes with riche extorted from the poor, downtrodden workingman. He flayed Roscoe on every corner, and he tore into Padit Ross as the most notorious example extant of the correst political boss. He warned the people they need espect nothing but confiscation of their streets and an ultimute ten or fifteen cent fare if the Republicans won; and is never failed to allude to himself as the gallant young sader who would bring peace and plenty, three-cent fire and universal transfers, a seat for every passenger, many cars for the rush hours, and special reduced rates for shed children—if he were elected.

Toward the last his speeches fell into three parts: The first was a denunciation of the street-car company; the seond was an assault on Roscoe; the third, and by far is longest section, consisted of promises of what he, T. Mar maduke Hicks, would do, with explanations at great in showing how eminently he was fitted to carry out promises, intellectually, morally and by reason of his all integrity and his enormous desire to help the working

Paddy Ross had many orators out campaigning. and b kept busily at his inside work. At first he was consider

he would win. Then he discovered the people were much aroused, and the talk of Hicks and his fellows on the Democratic-reform ticket was having its effect, especially in the Fourth, the Ninth, the Tenth and the Sixteenth wards, where most of the workingmen lived who were employed in the big factories and mills on the lower side of the town. In Rextown the factories were on one side of the city along a small stream that local pride called a river, and the workingmen lived across town from them in the wards enumerated, went to their work in the street cars in the morning and returned to their homes at night, going across town again. The city was loosely built, and it took almost half an hour for the workingmen in these outside wards to get from their homes to the factories and mills, and another half hour to get home at night, for the car service was none too good. The consequence was that the early morning cars were crowded and the cars returning at six o'clock jammed.

"How does it look, Paddy?" Roscoe asked, at the beginning of the third and last week of the city campaign.

"Not so good as it might. That young windjammer, Hicks, is making a lot of headway with these workingmen, and there are a good many votes against us in the middle of the town."

"But you can hold them, can't you?"

"I can hold the middle wards all right. I'm afraid of those wards where the workingmen live in numbers—the Fourth, Ninth, Tenth and Sixteenth."

"We've got a week before election. Can't we shove the franchise extension through the board at the meeting to-morrow night?"

"If we did," said Ross, "they'd tear us up by the roots. We've got to win this by votes. Don't worry. I'll have em all right. The only trouble is with those wards out on he edge of town, and they've

to a grouch for fair."

Roscoe went away, much

perturbed. He stopped in at one of the noonday meetings, and heard Hicks say things o an applauding crowd about toscoe fattening on the nickels srung from the grimy hands of toil that made him feel like hooting that young man. licks saw him and shouted:

"There he is! There he is, his arrogant plutocrat who eeks to debauch the electorte of this city by electing to he board of aldermen servile nd corrupt tools of Paddy loss to do his bidding and rob he poor workingman of the ard-earned fruits of his honst toil by extorting from him toney grudgingly paid to him y others of his ilk-these lutocrats who ride in their alatial automobiles while the oor workingman must crowd sto dirty, ill-smelling, antiuated street cars, or walk ith weary limbs from his umble home to the factories, here they chain him to his ench in order that they may oat and fatten on the results his honest industry."

Roscoe fled, followed by ers. He was much upset ben he reached his office. Jenkins," he said to the genal manager, "have you heard the things that demagogue, icks, is saying about me?" "Yes." Jenkins realied.

"Yes," Jenkins replied.
"Well, what are we going to about it?"

"There's nothing we can do it trust to Paddy Ross, so

r as I can see."
"It's terrible!" moaned oscoe. "Simply terrible! hy, I heard him to-day, and called me a vampire and a odsucker and an octopus d I don't know what else."
"Is that all he said?" asked nkins. "Evidently you in't hear him when he was good form!"

#### XXI

THE excitement increased as the week progressed. ddy Ross was shaky in his in mind over the outcome, and his shakiness increased when the results of his final poll began to come in on Wednesday. It looked like a close election with a ward or two to decide it. Paddy was sure of carrying seven wards and gave the opposition four sure, and that left five to fight for. He must have nine men to control the board. He had held a certain proportion of the voters in the outside wards and was working desperately in the wards in the center of the town, where the big business interests were arrayed for the street-car company and where the better classes of Republicans lived. He felt he must do something to pull back the Fourth, Ninth, Tenth and Sixteenth. If the opposition lost those they couldn't win. He sent money there, and put his strongest workers in the factories and mills to persuade the workingmen who lived in those wards to be reasonable. The street-car company put on many extra cars on the crosstown lines, and saw to it that every man had a seat. The workingmen were excited. Hicks and his allies had stirred them exceedingly. Rollins kept steadily pounding through the columns of the Chronicle, and had boys at the corners in these wards every morning, who gave each workingman a free copy of the Chronicle containing the Rollins broadsides.

Ross was worried. Roscoe was frantic. Rollins and Hicks were jubilant. On Wednesday, after his noonday meeting, when he had been especially inflammatory in his speech and had been loudly cheered, Hicks ate a sandwich and drank a glass of milk and went to his office to rest. The office was empty. The stenographer was out at lunch and so was the clerk. He was tired. The strain was beginning to tell on him, although the tonic of the applause, which he loved, braced him up during his public speaking. He removed his coat, locked the door of his room and leaned back in his chair. He was dozing when he heard Chittlings come in, accompanied by another man.

"Nobody here," said Chittlings. "I suppose that young partner of mine is out stirring them up."

"He's a fine partner for you to have," said the other man. "How'd you come to pick him out."

Hicks could hear the talk; he listened for Chittlings'

reply.

"Oh, he's all right. I can use him in my business. He'll get over this, but he's raising merry hob at this juncture, isn't he?"

"I should say he is!" said the other man bitterly.

Chittlings spoke again. "Well, Jenkins ——"
Jenkins! The general manager of the street-car company! Hicks moved noiselessly over to the ground-glass
partition between his room and that of Chittlings. He
strained his ears to hear.

"Well, Jenkins, you're in a mess, I'll say that for you. Unless you can pull something off in those outside wards you may get whipped."

"Pull something off?" replied Jenkins querulously.
"What can we pull off? We've done everything anybody has suggested and we've simply upholstered Paddy Ross with money, and he's scared stiff right now over the outlook. What do you want to talk to me about?"

"My dear Jenkins," said Chittlings suavely, "I asked you to come in and confer with me because it appears to me that for the general manager of a great public-service corporation you display a lack of resources that is amazing."

"What would you do, Mr. Wiseheimer?" asked Jenkins with a sneer.

"Far be it from me to assume to instruct you in your business, Mr. Jenkins," continued Chittlings pleasantly. "Not for the world would I suggest such a possibility, not for the world. Only, if I were general manager of the street-car company, I know what I should do."

"What would you do?" asked Jenkins excitedly. "What would you do?"

"Softly, my dear Jenkins! Softly!" said Chittlings soothingly. "Be calm. First and foremost, of course, I am under the rather pressing necessity of inquiring what a plan such as I have in mind would be worth to your aggregation of octopuses, as my partner dubs you?"

"Any amount of money, if it works," Jenkins exclaimed. "That is rather indefinite,

"That is rather indefinite, don't you think, Jenkins, in these days of hard, precise commercial transactions? Any amount now might dwindle to a very insignificant amount after election. Besides"—and Chittlings' voice grew almost caressing—"I didn't ask you for money. You jumped at a wrong conclusion. But I suppose," he laughed, "you are so used to buying protection you think that is the only way you can get it."

"What do you want, then?" asked Jenkins suspiciously.

"Would it surprise you if I told you I have nothing but the best interests of the company at heart?" asked Chittlings.

"It would. It would surprise me very much," Jenkins answered harshly. "But get down to business. What do you want?"

"A very small return, Jenkins, a very small return. I own some of your stock—not much, but enough to qualify; and I want to be put on your board of directors, for the business and financial standing that it will give me. Also I want your promise to make me one of your attorneys—to make me, you understand, not my firm."

Hicks, listening on the other side of the glass partition, clenched his fists. His partner intended to leave him out of this arrangement.

"That's a good deal," said Jenkins.

"A good deal!" Chittlings' voice hardened. "A good deal when, if this thing goes (Continued on Page 49)

#### Bad Banking in Illinois

ILLINOIS law permits any penniless adventurer to call himself a bank, using whatever high-sounding title his fancy may dictate, and to ficece a gullible public by accepting its money on deposit, then using the funds for any purpose he pleases.

Every year some of these bogus, uninspected, nonreporting, unregulated private banks fail. In the last twenty years confiding people in Chicago alone have been swindled out of immense sums. The discouragement of thrift, the injury to honest banking and the shame to the state have been pointed out innumerable times; yet to this day the law stands blandly by, furthering the robbery by refusing to lift a finger to prevent it.

The reason for this scandalous condition is found in the legislature. The outrage is of long standing. Everybody knows it. Nearly everybody condemns it. But a little coterie of interested persons, who find a private profit in perpetuating the scandal, has always been able to exert sufficient influence on the crowd of featherweights at Springfield to prevent a remedy.

This year a patriotic body recommends that about a third of the present legislators be defeated, as plainly unfit; but, with a legislature comprising some two hundred members, at least a third will always be unfit. In a lawmaking body of one-tenth that size, character, ability and responsibility might be expected.

#### A Gleam of Sunshine

THE iron and steel industry is in a depressed state. Orders are scarce and prices are low. With the distinguished exception of Judge Gary, the industry appears to be even more depressed mentally then physically. Its immemorial bulwark—the tariff—has been whittled down to a point where it is scarcely perceptible to a jaundiced

Agile foreigners—we gather from some trade reports—are flocking over it like grasshoppers descending on a field of young wheat; and the Government is pressing forward like a ruthless tortoise with its suit to dissolve the Steel Trust. Yet, for some weeks at this writing, the common stock of the Steel Trust has been selling above sixty dollars a share—considerably higher than it sold a year ago and within a few points of the highest mark of the last year and a half.

An industry one-half of the goodwill of which is worth three hundred million dollars in the market cannot have more than one foot in the grave,

#### Uncle Sam as a Banker

A DISTINGUISHED German banker points out something that Americans are apt to overlook amid discussions of the failings of our present banking system and the somewhat patchy and experimental character of the new banks that are in process of establishment—namely, that no such experiment in banking was ever before carried out in the world, because nowhere else in the world has there ever been a material change in a banking system which was at all comparable to that of the United States in point of size. Our reporting banks have twenty-two and a half billion dollars of assets. Their deposits, at eighteen billions, are double those of the English banks and four times those of the German banks.

In 1890 Mulhall calculated the banking power of the world at sixteen billion dollars, this country being credited with five billions. Our present banking power is nearly fifty per cent greater than that of the globe twenty-four years ago. In 1908 the Comptroller of the Currency calculated the banking power of all foreign countries at twenty-eight billions—but little over twenty per cent greater than the present banking power of this country alone.

To see how big the United States is one must go to Europe for comparisons.

#### Big Banking Alliances

A BIG German bank boasts that it is represented on the directorates of more than two hundred corporations, while a bigger rival figuratively gathers about half of industrial and commercial Germany under its wing.

As to the corporate connections of eminent Wall Street bankers, one may refer to the Money Trust report. In Germany and the United States, at least, Big Business has deliberately—even eagerly—put itself in hock to big banks. The common explanation is that Big Business constantly needs fresh capital and ties itself up with certain powerful banks in order to get itself financed.

That is not the real reason, however. A sound railroad or industrial does not need to stand, hat in hand, in Morgan's anteroom or the anteroom of the Deutsche Bank to get capital. The real reason is to restrain competition. Big Business does not flock to big banks as a source of capital, but as a refuge from competition.

Undoubtedly the most important function of such institutions as Morgan & Company and the Deutsche Bank is to keep competition in hand. They are a sort of medieval fair, at which traders can meet and discuss and adjust their differences under bonds to keep the peace, and make plans for their mutual benefit without knifing one another.

Mellen's testimony pictures Morgan in a dominating position. An important reason for that position was that Morgan, taking it all round, could do more to suppress competition than anybody else. Naturally, therefore, business turned to him.

#### Timber Waste

WHEN we fell a tree, thirteen per cent of it is left to rot as stump, top and branches. At the sawmill forty-three per cent of it goes into sawdust, bark, slabs, and so on. Two per cent is lost in seasoning; three per cent in planing and finishing. Four per cent more goes into the kindling heap when a house is built. Only thirty-five per cent of the original tree emerges in the form of a building—and when the carpenters are careless the proportion is less than that. Then we drop a lighted match into the oil can, burn the house and collect the insurance.

Outside of cities our whole country is built of wood, while European countries use brick and stone. This involves an enormous consumption of lumber—relatively to population, many times that of England, France or Germany. Every foot used involves two feet that may be wasted. Part of the waste, of course, is inevitable; part may be utilized in by-products.

That the immense fire waste is largely preventable every one knows. A shingle roof, for example, may be so treated as greatly to reduce its inflammability. We usually deem it easier not to bother about that and let the insurance company pay the loss if a fire occurs. Insurance ought to penalize carelessness more heavily than it does.

#### How the Money is Divided

A CORRESPONDENT asks: "Of the total product of manufactures, what part goes to capital and what to labor?" We ourselves should like to know. Something that points in the direction of an answer may perhaps be deduced from the census, the census figures bearing on the subject being roundly as follows:

Selling value at the factory of all products of manufactures in 1909 was—cutting off a row of ciphers—twenty dollars and sixty cents; materials consumed cost twelve dollars; salaries took one dollar; miscellaneous expenses, including everything that can come under the head of expenses except wages, interest and depreciation, took two dollars. That leaves five dollars and sixty cents to be divided between capital and labor, excluding salaried labor. Wage labor got three dollars and forty cents, leaving two dollars and twenty cents for capital.

Reducing it to other terms: of every dollar of the net residuum, capital got thirty-nine cents and wage labor sixty-one cents; but capital's thirty-nine cents is still chargeable with depreciation.

That is as far as census figures go in answering the question; but that twelve dollars—really twelve billion

dollars—of materials consumed was also a product of labor. Some of it was produced within the processes covered by the census report—for example, the finished product of a blan furnace is the raw material of a billet mill; the finished product of a sawmill is the raw material of a furniture factory. Some of it was produced outside the processes the census classes as manufactures—for example, the iron are that goes to the blast furnace and the logs that go to the sawmill.

Out of a dollar of the gross value of products of manfactures, as reported by the census, the wage labor covered by the census report gets only sixteen and a half cens. More significant than that, however, is the fact that it got seventeen and a half cents ten years ago; and over a long period the proportion of the gross value going to wage labor has pretty steadily decreased, while the steam horse power employed has rapidly increased. From 1904 to 1909 the gross value of products increased forty per cent, wages increased thirty-one per cent, and primary horse power increased thirty-nine per cent.

There is nothing more discouraging, under this bedien than census figures, partly because they are only rough more or less questionable approximations, and perbecause they indicate no advance whatever in the relatiposition of wage labor.

#### Handicaps on Foreign Trade

AT THE national conference on foreign trade more ten one speaker pointed out that cooperation was necessary. A few great exporters, such as the Oil Trust, the five Trust and the Harvester Trust, maintain big organization to look after their sales abroad. Only a huge concern as bear the expense of such an organization. Smaller concern must depend wholly on the Consular Service or cooperate Immediately the question arose: Can they cooperate without violating the antitrust laws and being rewarded by a term in prison?

Gentlemen learned in the law have debated this question, arguing that a certain amount of cooperation would probably be lawful. That any effectual cooperation will be lawful after the antitrust legislation on which Presides Wilson now insists is enacted seems rather doubtful.

The president of the Amalgamated Copper Company observed that foreign buyers were organized to a large extent and exerted a united force, "fixing the price stwick they will trade," and waiting patiently until, among unarganized American sellers, some one came down to that level, which immediately established the market price that all other American sellers were bound to meet.

That cooperation is necessary for a vigorous extension of foreign trade seems hardly to be denied. The law may permit it. Then the question will arise: If cooperation may be beneficial in foreign trade, why must it be deemed always injurious in domestic trade?

#### A Long Step Forward

THE constructive thing in the President's trust program is the proposal to create an industrial commission with powers somewhat like those of the Interstate Commerce Commission. This will be one positive forward step in a field where, so far, we have merely marked time or take negative steps.

There are all sorts of combinations and all sorts of restraints of trade. Some of them are very bad; but some of them are very good. Indeed, some of the most important restraints are imposed by the Government itself. Attempting to deal with all of them along the line of a sweepingly prohibitive statute will never, in our opinion, get the country very far toward any desirable goal.

Take two examples of our dependence on the Sherman Law as the sole instrument for dealing with combinations. First, the old Standard Oil Company paid dividends of forty or fifty per cent a year. In 1913 the various companies into which the old concern was resolved by judical decree paid dividends equivalent to more than a hundred per cent on the old stock. That is what mere dissoluted comes to. Second, the Government is now suing to the solve the American Sugar Refining Company, and the company very pertinently pleads a decision by the Supreme Court twenty years ago, holding that it was not a violated of the Sherman Law.

An industrial commission with power to require about reports, inspect books and examine officers will the course of time collect a body of trustworthy information about restraints and combinations, in the light which we may know better how to deal with them. The existence of such a body will be a valuable restraint a unconscionable practices.

It would be impossible to deal satisfactorily with the roads through the slow-moving, circumscribed courts. It dealing with railroads is simple in comparison to dealing with trade restraints and combinations, which premuch more various forms and differing conditions.

The spirit of the President's message is admirable of commission with adequate powers animated by that so will be very valuable.

# WHO'S WHO-AND WHY

Serious and Frivolous Facts About the Great and the Near Great

oro. or makes a term, married, b.c.

The New Chief of the Siy and

Jatty Jailormen

TP SPAKE the sailormen, the sly and salty sailormen, calling to Josephus, Lord of the Admiralty.

"Joey, old top," they said, quite casual-like, "who have you in mind for chief of the Bureau of Navigation?"

"And what," asked Josephus, recently transferred from tripod to the Navy Department trapeze—"and what is the Bureau of Navigation?"

"Hah!" responded the sailormen, the sly and salty sailormen. "Itis merely one of your little bureaus, of not much consequence; but you've got to have a head for it, of course. Now what do you say to Jimmie Portsides? Fine chap, Jimmie; and will do you credit."

"I'll see about it," replied Josephus.

"Curses!" said the sailormen, the sly and salty sailormen, as they were piped out of the room by Civilian H. A. Banks, of North Carolina, the same being the private secretary brought up by Josephus when he left the Tarheel State to be the Old Tar

the Administration. "Anxious, it seems to me!" commed Josephus with himself.

In came a friend wise to the ways of Washington.
"What," asked Josephus, "is the chief of the Bureau of wigation?"

"You are an editor?" spoke the friend.

"I am; but what has that to do with it?"

"I seek a comparison that will penetrate your editorial derstanding. In naval terms you would be fogged. Let say, then, that the chief of the Bureau of Navigation he managing editor of the Navy Department."

'Aha!" exclaimed Josephus, which is as far as he allows iself to go in the way of exclamation. "Aha! Aha-ha-ha!"

Whereupon Josephus ched out on the deck one of our dreadful add noughts and cked therefrom tor Blue, and made chief of the Bureau Navigation—Victor — does not that nd like a name out book?—who, as it need, was born in th Carolina himself.

#### Tarheels All

TOW," spoke Josephus, "by all the on the tarry heels of Tarheelers, including heels of my celeed and constiveson. onel Tom Pence, let n try to put over thing on this North olina combina-!"-which, in sooth, ems has been reably hard to do, with th Carolina repreed in Josephus, in ks and in Victor -North Carolina uard.

The Bureau of Navigation looks out for the human equation in the navy. It has to do with the men who fight and the men who stoke and the men who tell the men how to fight and how to stoke. Congress, of course, regulates the number of men there shall be in the navy; but the Bureau of Navigation gets them, enlists them, regulates them, directs them, disciplines them, and is the boss of the human side.

Not only that—and when you read this you will understand the concern of the sly and salty sailormen—the Bureau of Navigation exercises the same functions toward the officers in the navy. It commissions them, examines them for promotion, assigns them to stations and ships, and makes them toe the disciplinary mark as set forth in the regulations, which, with the approval of the Secretary of the Navy, it promulgates and enforces.

#### Victor Blue's Exploits at Santiago

NO MAN in the navy, from coal passer to the main luff on the bridge, but has personal dealings with the Bureau of Navigation at one time or another. It is the papa-inordinary to the whole outfit. It directs their movements and tells them what kind of uniform clothes they must wear. If, perchance, a fussy and dressy man should get to be chief of the Bureau of Navigation he would have it in his power to put the whole corps of officers in that arm of the service in debt to the tailors.

This matter of clothes is an intensely vital problem. The expense of uniforms for an officer is so great that the older ones tell the ensigns and junior lieutenants to hold their horses when they clamor to get married, and wait until they get to be commanders before they hop into that delightful state, for fear some chief of navigation will order a new cut of coat and put them on the rocks.

Uniforms are necessary; and it takes a large book, issued by the Navy Department, to tell the officers just how many and what kinds they must have. The change of the style of a collar on an officer's coat is more vital to the officers than the change from two turrets to three in the building of a battleship. It means a new uniform coat, and uniform coats are expensive. If some sartorial chief of navigation should decree that the uniforms of the jackies should be of radically different cut and style it would cost the Government the price of a submarine or a destroyer.

So you see why the sly and salty sailormen had designs on that bureau. The chief of it is a most important person, and twice important when there is a prospect of active service, such as has recently occurred in Southern waters. When Josephus found out about it all, as I have stated, he named Victor Blue for the place; and now, in his capacity of rear-admiral and chief of the bureau, Victor Blue is the big force in the department.

They knew about Blue when his name came up in Congress for his new place. He had been there before,

Once, officially and by special act, Congress designated him a hero and gave him a special medal of honor. Being a modest man and devoted to the service, he took the designation and the medal and let it go at that. He did not try to use either his heroism or his medal as a political asset; nor did he do any lecturing or interstate osculation. He kept on at his trade, which is that of a sailor.

At the time of the Spanish War the Board of Strategy was quite certain it had located the Spanish fleet in Santiago Harbor; but there came so many stories that it was elsewhere, that it had escaped, and that it never had been in Santiago Harbor, that the Board of Strategy began to have doubts; and so did Rear-Admiral Sampson, who was in command down there. It seemed to all concerned that it really was important to know exactly where the Spanish fleet was. Sampson called his fleet officers into conference and asked for a volunteer to go ashore and find out. Victor Blue volunteered. So did many others, but they selected Blue because he had been long in those waters, had a Spanishy complexion, and spoke the lingo.

Blue was put ashore at Aserradero, which is west of Santiago. He came on a company of four Cubans and with them worked his way round the entire harbor, making notes of it and securing the first positive information that Cervera and his ships were therein. After waiting hopefully for two weeks for the Spanish fleet to come out, Sampson decided to make an attempt to force Cervera to accept his hospitality, inasmuch as Cervera would not heed polite invitations to come out and be slaughtered.

This forcing was to be done by an attack with the torpedo destroyers, and it required more detailed information as to the exact location and character of the Spanish ships. Blue went through the Spanish lines again, and brought out a complete naval map, showing where the ships were, their number and of what character, and all that was necessary to know. Before this attack was made Cervera made his dash for the open sea; and immediately thereafter the Sampson-Schley controversy began.

#### No Swivel-Chair Admiral

BLUE is forty-eight years old and was graduated from the Naval Academy in 1887. He began as an engineer, but was transferred to the line and worked his way up through the various grades. His service has been varied; but he has been in most of the fighting done by our ships and with many of the landing forces. He gave distinguished service in the Boxer troubles in China, where he was a staff squadron commander, and in numerous affairs in Southern waters where our ships have been used. Unlike some of his colleagues who have done their sailing in swivel chairs, Blue has been at sea a large portion of the time he has been in the navy and has had a wide experience.

He is a fighting man who does not boast of it, and a sailor who has a definite idea that sailors—even naval

officers—would do well to go to sea from time to time; and he is sending many of the chair-warmers there. Likewise he is from North Carolina, but has been too busy at his trade to mix much in the intrigues and politics of the department—which does not hurt him in the eyes of his chief.

Whether the navy does no more than it has already done in Mexican waters or does a great deal more, Blue will be one of the main directing forces, as he has been since Secretary Daniels came in.

As he is a quiet, cool, level-headed man, who knows his business, the navy will be adequately handled along the lines laid down by the secretary and Victor Blue—not, as might have happened, along the lines laid down by certain of the sly and salty sailormen.

# AN AMERICAN VANDAL

# Old Masters and Other Ruins—By Irvin S. Cobb

OF COURSE it is a fine thing for one, and gratifying, to acquire a thorough art education. Personally I do not in the least regret the time I gave and the study I devoted to acquiring mine. I regard those two weeks as having been well spent.

I shall not do it soon again, however, for now I know all about art. Let others who have not enjoyed my advantages take up this study. Let others scour the art galleries of Europe seeking masterpieces. All of them contain masterpieces and most of them need scouring. As for me and mine, we shall go elsewhere. I love my art, but I am not fanatical on the subject. There is another side of my nature to which an appeal may be made. I can take my Old Masters or I can leave them be. That is the way I am organized—I have selfcontrol.

I shall not deny that the earlier stages of my art education were fraught with agreeable little surprises. Not soon shall I forget

the flush of satisfaction which ran through me on learning that this man Doré's name was pronounced like the first two notes in the music scale, instead of like a Cape Cod fishing boat. And, lingering in my mind as a fragrant memory, is the day when I first discovered that Spagnoletto was neither a musical instrument nor something to be served as gratin and eaten with a fork. Such acquirements as these are very precious to me.

But for the time being I have had enough. At this hour of writing I feel that I am stocked up with enough of Bouguereau's sorrel ladies and Titian's chestnut ones and Rubens' bay ones and Velasquez's pintos to last me, at a conservative estimate, for about seventy-five years. I am too young as a theatergoer to recall much about Lydia Thompson's Blondes, but I have seen sufficient of Botticelli's to do me amply well for a spell. I am still willing to walk a good distance to gaze on one of Rembrandt's portraits of one of his kinfolks, though I must say he certainly did have a lot of mighty homely relatives; and any time there is a first-rate Millet or Corot or Meissonier in the neighborhood I wish somebody would drop me a line, giving the address.

As for pictures by Tintoretto, showing Venetian Doges hobnobbing informally with members of the Holy Family, and Raphael's angels, and Michelangelo's lost souls, and Guidos, and Murillos, I have had enough to do me for months and months and months. Nor am I in the market for any of the dead fish of the Flemish School. Judging by what I have observed, the Flemish painters were devout churchmen and painted their pictures on Friday.

#### Worth a Million Without the Frame

THERE was just one drawback to my complete enjoyment of that part of our European travels we devoted to art. We would go to an art gallery, hire a guide and start through. Presently I would come to a picture that struck measbeing distinctly worth while. To my untutored conceptions it possessed unlimited beauty. There was, it seemed to me, life in the figures, reality in the colors, grace in the grouping. And then, just when I was beginning really to enjoy it, the guide would come and snatch me away.

He would tell me the picture I thought I admired was of no account whatsoever—that the artist who painted it had not yet been dead long enough to give his work any permanent value; and he would drag me off to look at a cracked and crumbling canvas depicting a collection of saints of lacquered complexions and hardwood expressions, with cast-iron trees standing up against cotton-batting clouds in the background, and a few extra halos floating round indiscriminately, like sun dogs on a showery day, and, up above, the family entrance into heaven hospitably ajar; and he would command me to bask my soul in this magnificent example of real art and not waste time on inconsequential and trivial things. Guides have the same idea of an artist that a Chinaman entertains for an egg. A fresh egg or a fresh artist will not do. It must have the perfume of antiquity behind it to make it attractive.

She is Not Going to Buy Anything - She is Merely Out Shopping

At the Louvre, in Paris, on the first day of the two we spent there, we had for our guide a tall, educated Prussian, who had an air about him of being an ex-officer of the army. All over the Continent you are constantly running into men engaged in all manner of legitimate and dubious callings, who somehow impress you as having served in the army of some other country than the one in which you find them. After this man had been chaperoning us about for some hours and we had stopped to rest, he told a good story. It may not have been true—it has been my experience that very few good stories are true; but it served aptly to illustrate a certain type of American tourist numerously encountered abroad.

"There were two of them," he said in his excellent English, "a gentleman and his wife; and from what I saw of them I judged them to be very wealthy. They were interested in seeing only such things as had been recommended by the guidebook. The husband would tell me they desired to see such and such a picture or statue. I would escort them to it and they would glance at it indifferently, and the gentleman would take out his lead pencil and check off that particular object in the book; and then he would say: 'All right—we've seen that; now let's find out what we want to look at next.' We still serve a good many people like that—not so many as formerly, but still a good many.

"Finally I decided to try a little scheme of my own. I wanted to see whether I could really win their admiration for something. I picked out a medium-sized painting of no particular importance and, pointing to it, said impressively: 'Here, m'sieur, is a picture worth a million dollars—without the frame!'

"'What's that?' he demanded excitedly. Then he called to his wife, who had strayed ahead a few steps. 'Henrietta,' he said, 'come back here—you're missing something. There's a picture there that's worth a million dollars—and without the frame, too, mind you!'

"She came hurrying back and for ten minutes they stood there drinking in that picture. Every second they discovered new and subtle beauties in it. I could hardly induce them to go on for the rest of the tour, and the next day they came back for another soul-feast in front of it."

Later along, that guide confided to me that in his opinion I had a keen appreciation of art, much keener than the average lay tourist. The compliment went straight to my head. It was seeking the point of least resistance, I suppose. I branched out and undertook to discuss art matters with him on a more familiar basis. It was a mistake; but before I realized that it was a mistake I was out in the undertow sixty yards from shore, going down for the third time, with a low, gurgling cry. He did not put out to save me, either; he left me to sink in the heaving and abysmal sea of my own fathomless ignorance. He just stood there and let me drown. It was a cruel thing, for which I can never forgive him!

In my own defense let me say, however, that this fatal indiscretion was committed before I had completed my art education. It was after we had gone from France into Germany, and from Germany into Austria, and from Austria into Italy, that I learned the great lesson about art—which is that whenever and wherever younge; a picture that seems to you resonably lifelike it is sine times in ten of no consequence whateever; and, unless you are willing to be regarded as a more ignoramus, you should straightage leave it and go and find some ancient picture of a group of clothing dummies mangagerating

> as angels or martyn, and stand before that one and carry on regardless.

When in doubt, look up a picture of Saint Sebastian. You never apperience any difficulty in fieling him—he is always represented a wearing very few clothes, being shot full of arrows to such an extent that clothes would not him anyway. Or else seek nor Saint Laurence, who is invariably featured in connection with a gridiron; or Saint Bartholanes, who, you remember, achieved canonization through a process

of flaying, and is therefore shown with his skin folded nearly and carried over his arm like an overcoat.

Following this routine you make no mistakes. Everybody is bound to accept you as one possessing a dep knowledge of art—and not mere surface art, either, but the innermost meanings and conceptions of art. Only sonetimes I did get to wishing that the Old Masters had left a little more to the imagination. They never withheld any d the painful particulars. It seemed to me they cheapened the glorious end of those immortal fathers of the faith by including the details of the martyrdom in every picture. Still, I would not have that admission get out and obtain general circulation. It might be used against me as an argument that my artistic education was grounded as a false and heretical foundation.

#### Doing the Vatican

IT WAS in Rome, while we were doing the Vaticas, that our guide furnished us with a sight that, considered as a human experience, was worth more to me than a year of Old Masters and Young Messers. We had pushed our post-blistered feet—a dozen or more of us—past miles of pairsings and sculptures and relics and art objects, and we set tired—oh, so tired!

Our eyes ached and our shoes hurt us; and the calves our legs quivered as we trailed along from galler; a corridor, and from corridor back to gallery.

We had visited the Sistine Chapel; and, such we see weariness, we had even declined to become excited ever Michelangelo's great picture of the Last Judgment. I was disappointed, too, that he had omitted to include in his collection of damned souls a number of persons I had each dently and happily expected would be present. I saw as one there even remotely resembling my conception of the person who first originated and promulgated the decirion that all small children should be told at the earliest possible moment that there is no Santa Claus.

That was a very severe blow to me, because I had slowly believed that the descent to eternal perdition would a incomplete unless he had a front seat. And the man will first hit on the plan of employing child labor on night first hit on the plan of employing child labor on night first in cotton factories—he was unaccountably absent to And likewise the original inventor of the toy pisted fact, the absentees were entirely too numerous to sure There was one thing, though, to be said in praise of Market angelo's Last Judgment—it was too large and too employed to be reproduced successfully on a souvenir posterate; and I think we should all be very grateful for the mercy anyway.

As I was saying, we had left the Sistine Chapel a mast so behind us and had dragged our exhausted frames at as an arched upper portice in a wing of the great part overlooking a paved courtyard inclosed at its farthered by a side wall of Saint Peter's. We saw, in another partial similar to the one where we had halted and running partial to it, long rows of peasants, all kneeling and all with the faces turned in the same direction.

"Wait here a minute," said our guide. "I think you will see something not included in the regular itinerary of the day."

So we waited. In a minute or two the long lines of kneeling peasants raised a hymn; the sound of it came to us in quavering snatches. Through the aisle formed by their bodies a procession passed the length of the long portico and back to the starting point. First came Swiss Guards in their gay piebald uniforms, carrying strange-looking pikes and halberds; and behind them were churchly dignitaries, all bared of head; and last of all came a very old and very feeble man, dressed in red, with a wide-brimmed red hat—and the red made a strong contrast for his white hair and his white face, which seemed drawn and worn, but very gentle and kindly and beneficent.

He held his right arm aloft, with the first two fingers extended in the gesture of the apostolic benediction. He was so far away from us that in perspective his profile was reduced to the miniature proportions of a head on a postage stamp; but, all the same, the lines of it stood out clear and distinct. It was His Holiness, Pope Pius the Tenth, blessing a pilgrimage.

All the guides in Rome follow a regular routine with the tourist. First, of course, they steer you into certain shops in the hope that you will buy something and thereby enable them to earn commissions. Then, in turn, they carry you to an art gallery, to a church, and to a palace, with stops at other shops interspersed between; and invariably they wind up in the vicinity of some of the ruins. Ruins is a Roman guide's middle name; ruins are his one best bet, In Rome I saw ruins until I was one myself.

#### Romulus and His Circus

WE DEVOTED practically an entire day to ruins; that was the day we drove out the Appian Way, glorious in legend and tale, but not quite so all-fired glorious when you are reeling over its rough and rutted pavement in an elderly and indisposed open carriage, behind a pair of half-broken

Roman-nosed horses which insist on walking on their hind legs whenever they tire of going on four. The Appian Way, as at present constituted, is a considerable disappointment. For long stretches it runs between high stone walls, broken at intervals by gateways, where votive lamps burn before small shrines, and by the tombs of such illustrious dead as Seneca and the Horatii and the Curiatii.

At more frequent intervals are small wine groggeries. Being built mainly of Italian marble, which is the most enduring and the most unyielding substance to be found in all Italy—except a linen collar that has been starched in an

Italian laundry—the tombs are in a pretty fair state of preservation; but the inns, without exception, stand most desperately in need of immediate repairing.

A cow in Italy is known by the company she keeps; she rambles about, in and out of the open parlor of the wayside inn, mingling freely with the patrons and the members of the proprietor's household.

Along the Appian Way a cow never seems to care whom she runs with; and the same is true of the domestic fowls and the family donkey. A donkey will spend his day in the doorway of a wine shop when he might just as well be enjoying the more sanitary and less-crowded surroundings of a stable. It only goes to show what an ass a donkey is.

Anon, as the fancy writers say, we skirted one of the many wrecked aqueducts that go looping across the country to the distant hills, like great stone straddlebugs. In the vicinity of Rome you are rarely out of sight of one of these aqueducts. The ancient Roman rulers, you know, curried the favor of the populace by opening baths. A modern ruler could win undying popularity by closing up a few!

We slowed up at the Circus of Romulus and found it a very sad circus, as such things go—no elevated stage, no hippodrome track, no centerpole, no trapeze, and only one ring. P. T. Barnum would have been ashamed

to own it. A broken wall, following the lines of an irregular oval; a cabbage patch where the arena had been; and various tumble-down farmsheds built into the shattered masonry—this was the Circus of Romulus. However, it was not the circus of the original Romulus, but of a degenerate successor of the same name who rose suddenly and fell abruptly after the Christian Era was well begun. Old John J. Romulus would not have stood for that circus a minute!

No ride on the Appian Way is regarded as complete without half an hour's stop at the Catacombs of Saint Calixtus; so we stopped. Guided by a brown Trappist, and all of us bearing twisted tapers in our hands, we descended by stone steps deep under the skin of the earth

ST CARDON WATER

ST CAR

the moldered bones of those early Christians from the vulgar gaze and prying fingers of every impious relic hunter who might come along.

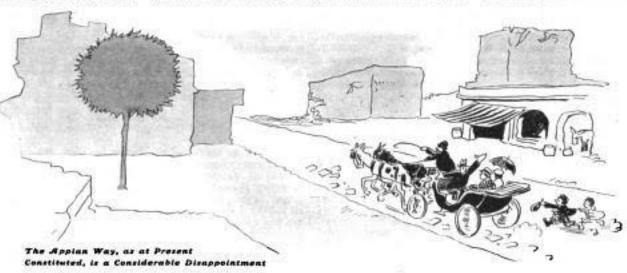

The dispute rose higher and grew warmer until I offered to bet him fifty dollars that I was right and he was wrong. He took me up promptly—he had sporting instincts; I'll say that for him—and we shook hands on it then and there to bind the wager. I expect to win that bet.

We had turned off the Appian Way and were crossing the edge of that unutterably hideous stretch of tortured and distorted waste known as the Campagna, which goes tumbling away to the blue Alban Mountains, when we came on the scene of an accident. A two-wheeled mule cart, pro-

> ceeding along a crossroad, with the driver asleep in his canopied seat, had been hit by a speeding automobile and knocked galley-west. The automobile had sped on-so we were excitedly informed by some other tourists who had witnessed the collision-leaving the wreckage bottom side up in the ditch. The mule was on her back, all entangled in the twisted ruin of her gaudy gear, kicking out in that restrained and genteel fashion in which a mule always kicks when she is desirous of protesting against existing conditions, but is wishful not to damage herself while so doing.

> The tourists, aided by half a dozen peasants, had dragged

the driver out from beneath the heavy cart and had carried him to a pile of mucky straw under the eaves of a stable. He was stretched full length on his back, senseless and deathly pale under the smeared grime on his face. There was no blood; but inside his torn shirt his chest had a caved-in look, as though the ribs had been crushed flat, and he seemed not to breathe at all. Only his fingers moved.

and wandered through dim, dank underground passages, where thousands of early Christians had lived and hid, and held clandestine worship before rude stone altars, and had died and been buried—died in a highly unpleasant fashion, some of them.

The experience was impressive, but malarial. Coming away from there I had an argument with a fellow American. He said that if we had these Catacombs in America we should undoubtedly enlarge them and put in bandstands and lunch places, and make them altogether more attractive for picnic parties and Sunday excursionists.

I contended, on the other hand, that if they were in America the authorities would close them up and protect

# up a great obehind us; an bare fields, a outspread and she sped town was the injure grandmother. There was that a neighbor so, having no if she was his

THEY kept twitching, as though his life was running out of him through his finger ends. One felt that if he would but grip his hands he might stay its flight and hold it in.

Just as we jumped out of our carriage a young peasant woman, who had been bending over the injured man, set up a great outcry, which was instantly answered from behind us; and looking round we saw, running through the bare fields, a great, bulksome old woman, with her arms outspread and her face set in a tragic shape, shrieking as she sped toward us in her ungainly wallowing course. She was the injured man's mother, we judged—or possibly his grandmother.

There was nothing we could do for the human victim. Our guides, having questioned the assembled natives, told us there was no hospital to which he might be taken and that a neighborhood physician had already been sent for. So, having no desire to look on the grief of his mother—if she was his mother—a young Austrian and I turned our attention to the neglected mule. We felt that we could at least render a little first aid there. We had our pocket-knives out and were slashing away at the twisted maze of ropes and straps that bound the brute down between the shafts, when a particularly shrill chorus of shrieks checked us.

We stood up and faced about, figuring that the poor devil on the muck heap had died and that his people were bemoaning the death. That was not it at all. The entire group, including the fat old woman, were screaming at us

General Motors Truck Company is the big manufacturer of commercial motor vehicles—building both gasoline and electric trucks for every business requirement.

The product of this big organization is branded GMC. It is the mark not only of a thoroughly good motor truck, but more important, it stands for a business stability and permanence that insures satisfaction to GMC Truck owners today and years hence.

In buying from a big manufacturer, GMC owners get the additional benefit of production economies which result from big volume and low overhead expense.

They are able to select trucks that absolutely meet their own business needs at prices which represent actual truck value.

	Capacity	Price
Gasoline	13a Tons	31500
Chassis	2 Tons	1900
Contractor .	3% Tons	2250
	355 Tone	2500
	5 Tons	2750
	5 Tona	3000
Electric	1000 lbs.	\$1200
Chasin	2000 Dec.	1300
	3000 Pbs.	1450
(Less Battery)	4000 Iba.	1560
	6000 lbs.	1900
	8000 lbs.	2100
	1,0000 lbs.	2350
	12000 Tbs.	2500

In the opinion of GMC owners there is such to be gained by dealing with a truck massifacturer building both gasoline and electric trucks.

Just what these advantages are and their possible benefit to your business can be learned from our nearest distributor or by writing our factory direct.

Correspondence invited with dealers of financial responsibility.

and shaking their elenched fists at us, warning us not to damage that harness with our knives. Feeling ran high, and threatened to run higher

So, having no desire to be mobbed on the spot, we desisted and put up our knives; and after a while we got back into our carriage and drove on, leaving the capsized mule still belly-up in the débris, lashing out carefully with her skinned legs at the trappings that bound her; and the driver was still prone on the dunghill, with his fingers twitching more feebly now, as though the life had almost entirely fled out of him—a grim little tragedy set in the midst of a wide and aching desolation! We never found out his name or learned how he fared—whether he lived or died, and if he died how long he lived before he died. It is a puzzle which will always lie unanswered at the back of my mind, and I know that in odd moments it will return to torment me. I will bet one thing, though—nobody else tried to cut that mule out of her harness!

that mule out of her harness!

In the chill late afternoon of a Roman day the guides brought us back to the city and took us down into the Roman Forum, which is in a hollow instead of being up on a hill as everybody imagines it to be until they go to Rome and see it; and we finished up the day at the Golden House of Nero, hard by the vast ruins of the Colosseum. We had already visited the Forum once, so this time we did not stay long—just long enough for some ambitious pickpocket to get a wallet out of my hip pocket while I was pushing forward with a flock of other human sheep for a better look at the ruined portico wherein Mark Antony stood when he delivered his justly popular funeral oration over the body of the murdered Cæsar. I never did admire the character of Mark Antony with any degree of extravagance, and since this experience I have felt actually him.

bitter toward him.

The guidebooks say that no visitor to Rome should miss seeing the Golden House of Nero. When a guidebook tries to be humorous it only succeeds in being foolish. Practical jokes are out of place in a guidebook anyway. Imagine a large, old-fashioned brick smokehouse, which has been struck by lightning, burned to the roots and buried in the wreckage, and the site used as a pasture land for goats for a great many years; imagine the débris as having been dug out subsequently until a few of the foundation lines are visible; surround the whole with distressingly homely buildings of a modern aspect, and stir in a miscellaneous seasoning of beggars and loafers and souvenir venders—and you have the Golden House where Nero meant to round out a life already replete with incident and abounding in romance, but was deterred from so doing by reason of being cut down in the midst of his activities at a comparatively early age.

#### In the Golden House

In the presence of the Golden House of Nero I did my level best to recreate before my mind's eye the scenes that had been enacted here once on a time. I tried to picture this moldy, knee-high wall as a great glittering palace; and yonder broken roadway as a splendid Roman highway; and those American-looking tenements on the surrounding hills as the marble dwellings of the emperors; and all the broken pillars and shattered porticoes in the distance as arches of triumph and temples of the gods. I tried to convert the clustering mendicants into barbarian prisoners clanking by, chained at wrist and neck and ankle; I sought to imagine the pestersome flower venders as being vestal virgins; the two frowsy policemen, who loafed near by, as centurions of the guard; the passing populace as grave senators in snowy togas; the flaunting underwear on the many clotheslines as silken banners and gilded trappings. I could not make it. I tried until I was lame in both legs and my back was strained. It was no go.

If I had been a poet, or a historian, or a person full of Chianti, I presume I might have done it; but I am no poet and I had not been drinking. All I could think of was that the guide on my left had eaten too much garlic and that the guide on my right had not eaten enough. So in self-defense I went away and ate a few strands of garlic myself; for I had learned the great lesson of the proverb:

When in Rome be an aroma!

When we had reached Pompeli, though, the situation was different. I could conjure up an illusion there—the biggest, most vivid illusion I have been privileged to harbor since I was a small boy. It was worth spending four days in Naples for the sake of spending half a day in Pompeii; and if you know Naples you will readily understand what a high compliment that is for Pompeii.

To reach Pompeii from Naples we followed a somewhat roundabout route; and that trip was distinctly worth while too. It provided a most pleasing foretaste of what was to come. Once we had cleared the packed and festering suburbs, we went climbing across a terminal vertebra of the mountain range that sprawls lengthwise of the land of Italy, like a great spiny-backed crocodile sunning itself, with its tail in the Tyrrhenian Sea and its snout in the Piedmonts; and when we had done this we came out on a highway that skirted the bay.

There were gaps in the hills, through which we caught glimpses of the city, lying miles away in its natural amphitheater; and at that distance we could revel in its picturesqueness and forget its bouquet of weird stenches. We could even forget that the automobile we had hired for the excursion had one foot in the grave and several of its most important vital organs in the repair shop. I reckon that was the first automobile built. No; I take that back. It never was a first—it must have been a second to

I once owned a half interest in a sick automobile. It was one of those oldfashioned, late-Victorian automobiles, cut princesse style, with a placket in the back; and it looked like a cross between a flat-bed job press and a tailor's goose. It broke down so easily and was towed in so often by more powerful machines that every time a big car passed it on the road it stopped right where it was and nickered.

#### The Invalid Motor Car

Of a morning we would start out in that car, filled with high hopes and bright anticipations, but eventide would find us returning homeward close behind a bigger automobile, in a relationship strongly suggestive of the one pictured in the well-known Nature group entitled: Mother Hippo, With Young. We refused an offer of four hundred dollars for that machine. It had more than four hundred dollars worth of things the matter with it.

The car we chartered at Naples for our trip to Pompeii reminded me very strongly of that other car of which I was part owner. Between them there was a strong family resemblance, not alone in looks but in deportment also. For patient endurance of manifold ills, for an inexhaustible capacity in developing new and distressing symptoms at critical moments, for cheerful willingness to play foal to some other car's dam, they might have been colts out of the same litter. Nevertheless, between intervals of breaking down and starting up again, and being helped along by friendly passer-by automobiles, we enjoyed the ride from Naples.

We enjoyed every inch of it.

Part of the way we skirted the flanges of the great witches' caldron of Vesuvius. On this day the resident demons must have been stirring their brew with special enthusiasm, for the smoky smudge which always wreathes its lips had increased to a great hillowy plume that lay along the naked flanks of the devil mountain for miles and miles. Now we would go puffing and panting through some small outlying environ of the city. Always the principal products of such a village seemed to be young babies, and macaroni drying in the sun. I am still reasonably fond of babies, but I date my loss of appetite for imported macaroni from that hour. Now we would emerge on a rocky beadland and below us would be the sea, eternally young and dimpling like a maiden's cheek; but the crags above were eternally old and they were all gashed with wrinkles and seamed with folds like the jowls of an ancient squaw. Then for a distance we would run right along the face of the cliff.

Directly beneath us we could see little stone huts of fishermen clinging to the rocks just above high watermark, like so many gray limpets; and then, looking up, we would catch a glimpse of the vineyards, tucked into man-made terraces along the upper cliffs, like bundled herbs on the pantry shelves of a thrifty housewife; and still higher up there would be orange groves and lemon groves and dusty-gray olive groves. Each succeeding picture was Byzantine in its coloring. Always the sea was molten blue enamel and the far-away villages

seemed crafty inlays of mosaic work; and the sun was a disk of hammered Grecian gold.

A man from San Francisco was sharing the car with us, and he came right out and said that if he were sure heaven would be as beautiful as the Bay of Naples he would change all his plans and arrange to go there. He said he might decide to go there anyhow, because heaven was a place he had always heard very highly spoken of. And I agreed with him.

agreed with him.

The sun was slipping down the western sky and was laced with red like a bloodshot eye, with a Jacob's ladder of rainbow shalls streaming down from it to the water, when we turned inland; and after several small minor stops while the automobile caught its breath and had the beaves and the asthma, we came to Pompeii over a read built of volcanic rock.

I have always been glad that we went there on a day when visitors were few. The very solitude of the place aided the mind in the task of repeopling the empty streets of that dead city by the sea with the life that was hers nearly two thousand years ago. Herculaneum will always be buried, so the scientists say, for Herculaneum was snuggled close up under Vesuvius, and the hissing-hot lava came down in waves; and first it slugged the doomed town to death and then slagged it over with impenetrable, flinthard deposits. Pompeii, though, hy farther away, and was entombed in dust and ashes only; so that it has been comparatively easy to unearth it and make it whole again. Even so, after one hundred and sixty-odd years of more or less desultery explorations, nearly a third of its supposed area is yet to be excavated.

It was in the year 1592 that an architect named Fontana, in cutting an aqueduct which was to convey the waters of the Sarno to Torre dell'Annunziata, discovered the foundations of the Temple of Isis, which stood near the walls on the inner or land side of the ancient city. It was at first supposed that he had dug into an isolated villa of some rich Roman; and it was not until 1748 that prying archæologists hit on the truth and induced the government to send a chain gang of convicts to dig away the accumulations of earth and tufa; but if it had been a modern Italian city that was buried no such mistake in preliminary diagnosis could have occurred. Anybody would have known it instantly by the smell. I do not vouch for the dates—I copied them out of the guidebook; but my experience with Italian cities qualifies me to speak with authority regarding the other matter.

#### Thoughts on a Pompelian Bar

Afoot we entered Pompeii by the restored Marine Gate. Our first stop within the walls was at the Museum, a comparatively modern building, but containing a fairly complete assortment of the relics that from time to time have been disinterred in various quarters of the city. Here are wall cabinets filled with tools, ornaments utensils, jewelry, furniture—all the small things that fulfilled every-day functions in the first century of the Christian Era. Here is a kit of surgical implements, and some of the implements might well belong in a modern hospital.

From here we went on into the city proper; and it was a whole city, set off by itself and not surrounded by those jarring modern incongruities that spoil the ruins el Rome for the person who wishes to give his fancy a slack rein. It is all here, looking much as it must have looked when Nero and Caligula reigned; and much as it will still look hundreds of years hence, for the government owns it now and guards it and protects it from the hammer of the vandal and the greed of the casual collector. Here it is—all of it; the tragic theater and the comic theater; the basilica; the greater forum and the lesser one; the market place: the amphitheater for the games; the training school for the gladiators; the tempies: the baths; the villas of the rich; the hut of the poor; the cubicles of the slaves; shops: offices; workrooms; brothels.

The roofs are gone, except in a few instances where they have been restored; but the walls stand and many of the detached pillars stand too; and the pavements have endured well, so that the streets remainstances exactly as they were when this was city of live beings instead of a tomb of deamermories, with deep groovings of chance wheels in the flaggings, and at each crosses a stepping-stones dotting the roadbed has

At the public fountain the well curbs are worn away where the women rested their water jugs while they swapped the gossip of the town; and at nearly every corner is a groggery, which in its appointments and fixtures is so amazingly like unto a family liquor store as we know it that, venturing into one, I caught myself looking about for the Business Men's Lunch, with a collection of greasy forks in a glass receptacle, a crock of pretzels on the counter, and a sign over the bar reading: No Checks Cashed—This Means You!

In the floors the mosaics are as fresh as though newly applied; and the ribald and libelous Latin, which disappointed liti-gants carved on the stones at the back of the law court, looks as though it might have been scored there last week—certainly not further back than the week before that. A great many of the wall paintings in the in-teriors of rich men's homes have been preserved and some of them are fairly spicy as to subject and text. It would seem that in these matters the ancient Pompelians were pretty nearly as broad-minded and liberal as the modern Parisians are.

#### Mrs. Belladonna Goes Shopping

The mural decorations I saw in certain villas were almost suggestive enough to be acceptable matter for publication in a French comic paper—almost, but not quite. Mr. Anthony Comstock would be an unhappy man were he turned loose in Pompeii—unhappy for a spell, but after

Pompesi—unhappy for a speal, but after that exceedingly busy.

We lingered on, looking and marveling, and betweenwhiles wondering whether our automobile's hacking cough had got any better by resting, until the sun went down and the twilight came. Following the guidebook's advice we had seen the Colosseum.

Down by manufact. These was a full in Rome by moonlight. There was a full moon on the night we went there. It came heaving up grandly, a great, round-faced, full-cream, curdy moon, rich with rennet and yellow with butter fats; but by the time we had worked our way south to Naples a greedy fortnight had bitten it quite away, until it had been reduced to a mere cheese rind of a moon, set up on end against the delft-blue platter of a perfect sky. We waited until it showed its thin rim in the heavens, and then, in the softened half-glow, with the purplish shadows deepening between the brown-gray walls of the dead city, I just naturally turned my imagination loose and let her soar.

Standing there, with the stage set and the light effects just right, in fancy I repopulated Pompeii. I beheld it just as it was on a fair, autumnal morning in 79 A. D. With my eyes half closed, I can see the

vision now.

At first the crowds are massed and mingled in confusion, but soon figures detach themselves from the rest and reveal themselves as prominent personages. Some of them I know at a glance. You tall, imposing man, with the genuine imitation sealskin collar on his toga, who strides along so ma-jestically, whisking his cane against his leg, can be no other than Gum Tragacanth, leading man of the Bon Ton Stock Company, fresh from his metropolitan triumphs in Rome and at this moment the reigning matinée idol of the South. This week he is playing Claude Melnotte in The Lady of Lyons; next week he will be seen in his celebrated characterization of Matthias in The Bells, with special scenery; and for the

regular Wednesday and Saturday bargain matinées Lady Audley's Secret will be given. Observe him closely. It is evident that he values his art. Yet about him there is no false ostentation. With what gracious condescension does he acknowledge the half-timid, half-daring smiles of all the little caramel-chewing Floras and Faunas who have made it a point to be on Main Street at this hour! With what careless grace does he doff his laurel wreath, which is of the latest and most modish fall block, with the bow at the back, in response to the waved greeting of Mrs. Belladonna Capsicum, the acknowledged leader of the artistic and Bohemian set, as she sweeps by in her chariot bound for Blumberg Brothers' to do a little shopping. She is not going to buy anything—she is merely out shopping. Than this fair patrician dame none is

more prominent in the gay life of Pompeii. It was she who last season smoked a cigarette in public, and there is a report now that she is seriously considering wearing an ankle bracelet; withal she is a perfect lady and belongs to one of the old Southern families. Her husband has been through

the bankruptcy courts twice and is thinking of going through again. At present he is engaged in promoting and is writing a little life insurance on the side.

Now her equipage is lost in the throng and the great actor continues on his way,

making a mental note of the fact that he has promised to attend her next Sunday afternoon studio tea. Near his own stage door he bumps into Commodius Rotunda, the stout comedian of the comic theater, and they pause to swap the latest Lambs Club repartee. This done, Commodius hauls out a press clipping and would read it, but the other remembers providentially that he has a rehearsal on and hurriedly departs. If there are any press clippings to be read he has a few of his own that will bear

Superior Maxillary, managing editor of the Pompeiian Daily News-Courier, is also abroad, collecting items of interest and subscriptions for his paper, with preference given to the latter. He enters the Last Chance Saloon down at the force of the hance Saloon down at the foot of the street and in a minute or two is out again, wiping his mustache on the back of his hand. We may safely opine that he has been taking a

small ad out in trade.

At the door of the county courthouse, where he may intercept the taxpayers as they come and go, is stationed our old friend, Colonel Pro Bono Publico. The Colonel has been running for something or other ever since Heck was a pup. Today he is wearing his official campaign smile, for he has just been announced as a candidate for county judge, subject to the action of the Republican party at the October primaries. He is also wearing all his lodge buttons and likewise his G. A. R. pin, for this year he figures on carrying the old-soldier vote.

#### Nux Vomica's Lost Limerick

In front of the drug-store on the corner a score of young bloods, dressed in snappy togas for Varsity men, are skylarking. They are especially brilliant in their flashing interchanges of wit and humor, because the Mastodon Minstrels were here only last eek, with a new line of first-part jokes. Along the opposite side of the street passes Nux Vomica, M. D., with a small black case in his hand, gravely intent on his pro-fessional duties. Being a young physician ha wears a beard and large-rimmed eyeglasses. Young Ossius Dome sees him and hails him.

'Oh, Doc!" he calls out. "Come over here a minute. I've got some brand-new limerickii for you. Tertiary Tonsillitis got 'em from a traveling man he met day be-fore yesterday when he was up in the city, laying in his stock of fall and winter armor."

The healer of ills crosses over; and as the

group push themselves in toward a common center I hear the voice of the speaker:
"Say, they're all bully; but this is the
bullissimus one of the lot. It goes like this:

#### "'There was a young maid of Sorrento, Who said to her ——""

I have regretted ever since that at this juncture I came to and so failed to get the rest of it. I will bet that was a peach of a limerick. It started off so promisingly.

And now it devolves on me as a painful yet necessary duty to topple from its ped-estal one of the most popular idols of legend-ary lore. I refer, I regret to say, to the widely famous Roman Sentry of old Pompeii.

Personally I think there has been entirely too much of this sort of thing going on lately. Muckrakers, prying into the storied past, have destroyed many of the pet characters in history

Horatius never held the bridge; he just let the blamed thing go. The boy did not stand on the burning deck, whence all but him had fled; he was among the first in the lifeboats. That other boy—the Spartan youth—did not have his vitals gnawed by a fox; the Spartan youth had been eating wild grapes and washing them down with spring water—hence that gnawing sensa-tion of which so much mention is made.

Even Barbara Frietchie is an exploded myth. She did not nail her country's flag to the window casement. Being a female, she could not nail a flag or anything else to a window. In the first place, she would have used a wad of chewing gum and a couple of hairpins. In the second place, had she recklessly undertaken to nail up a flag with a hammer and nails, she would never have been on hand at the psycho-logical moment to invite Stonewall Jackson to shoot her old gray head. When General Jackson passed the house she would have been in the bathroom bathing her left thumb in witch-hazel.

Furthermore, she did not have any old gray head. At the time of the Confederate invasion of Maryland she was only seventeen years old-some authorities say only

seven-and a pronounced blonde. Also, she did not live in Frederick; and, even if she did live there, on the occasion when the troops went through she was in Baltimore

visiting a school friend. I repeat that there has been too much of If the craze for smashing all our romantic fixtures persists, after a while we shall have no glorious traditions left with which to fire the youthful heart at high-school commencements. But in the inter-ests of truth, and also because I made the discovery myself, I feel it to be my solemn duty to expose the Roman Sentry, stationed at the gate of Pompeii, looking toward the sea, who died, we are told, because he would not quit his post without orders and had no orders to quit.

#### Those Ringing Lines of Laryngitis

Until now this party has stood the acid test of the centuries. Everybody who ever wrote about the fall of Pompeii, from Plutarch and Pliny the Younger clear on down to Bulwer Lytton and Burton Holmes, had something to say about him. The lines on this subject by the Greek poet Laryngitis are familiar to all lovers of that great master of classic verse.

Suffice it to say that the Roman Sentry, perishing at his post, has ever been a favor-ite subject for historic and romantic writers. I myself often read of him-how on that dread day when the devil's stew came to a boil and spewed over the sides of Vesuvius, and death and destruction poured down to blight the land, he, typifying forti-tude and discipline and unfaltering devo-tion, stood firm and stayed fast while all about him chaos reigned and fathers forgot their children and husbands forgot their wives, and vice versa, though probably not to the same extent; and how finally the drifting ashes and the choking dust fell thicker on him and mounted higher about him, until he died and in time turned to ashes himself, leaving only a void in the solidified slag. I had always admired that soldier—not his judgment, which was faulty, but his heroism, which was immense.

To myself I used to say:
"That unknown common soldier, name-less though he was, deserves to live forever in the memory of mankind. He lacked imagination, it is true, but he was game. It was a glorious death to die—painful, yet splendid. Those four poor wretches whose shells were found in the prison down under the gladiators' school, with their ankles fast in the iron stocks—I know why they stayed. Their feet were too large for their own good. But no bonds except his dauntless will bound him at the portals of the doomed city. Duty was the only chain that held him.

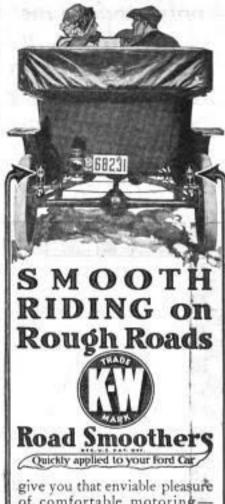

"And to think that centuries and cen-turies afterward they should find his monument—a vacant, empty mold in the piled-up pumice! Had I been in his place I should have created my vacancy much sooner—say, about thirty seconds after the first alarm went in. But he was one who chose rather that men should say, 'How natural he looks!' than 'Yonder he goes!' And he has my sincere admiration. When go to Pompeii—if ever I do go there— shall seek out the spot where he made the supremest sacrifice to authority that ever any man could make, and I shall tarry a while in those hallowed precincts!"

while in those hallowed precents!"

That was what I said I would do and that was what I did do that afternoon at Pompeii. I found the gate looking toward the sea and I found all the other gates, or the sites of them; but I did not find the Roman Sentry or any trace of him, or any authentic record of him. I questioned the wildes and through an interrupter, the the guides and, through an interpreter, the curator of the Museum, and from them I learned the lamentably disillusioning facts in this case. There is no trace of him because he neglected to leave any trace.

Doubtless there was a sentry on guard at the gate when the volcano belched forth, and the skin of the earth flinched and thivered and split asunder; but he did not re-main for the finish. He said to himself that this was no place for a minister's son; and so he girded up his loins and he went away from there. He went away hurriedly—even as you and I.

Editor's Note-This is the tenth in a series of articles by Irvin S. Cobb. The eleventh will appear in an early issue.

of comfortable motoringregardless of how rough the roads or how fast you drive.

It's a combination of a helical spring to take up the shock, an airchamber to check the rebound and anti-side motion links that preyeat side rocking and consequent skidding turning corners. No wearing parts means no friction - no oiling-no trouble.

Taking the Bumps is the hardest kind of work. That is why in K-W Road Smoothers are found no cheap castings, but instead high grade drop forgings, electric smelted chrome Vanadium steel springs, the best of workmanship, and the K-W Quality that makes possible our broad guarantee.

#### BEWARE OF IMITATIONS

€ There is only one Road Smoother— Don't Confuse with ordinary shock absorbers or auxiliary springs. Look for the name - K-W Road Smoother.

■ Write for booklet, "Taking out the Bumps"

Apply modern methods to your housekeeping problems. Let electricity, which is instantly available at every light socket in your home, be your willing servant. Do all of your ironing and much of your cooking the Hothoint way - you'll find it a delightful change, saving you time, trouble and strength—a real economy. special wiring - no bother - nothing to learn.

# Cook it electrically - right at the table.

Breakfast: Perfect coffee made in Aluminum El Perco-with toast and eggs or potatoes and chops, or whatever you please, perfectly cooked and sizzling hot right from El Grillo. Or for a quick luncheon - prepare it on the porch if you choose; or a dainty after-theater snack.

#### Yes —"to boil it is to spoil it"

Simply put cold water into the pot, ground coffee into the basket, and insert the plug. In half a minute percolation begins and shortly you pour a perfect brew-none of the caffein bitterness. Because when made in Aluminum El Perco, the coffee is never boiled.

Aluminum El Perco is very handsome and light. No floats, valves or traps to get out of order. Extremely economical because the heating element is entirely surrounded by water. Heating Element guaranteed for five years. Price \$7.50. In Canada, \$9.75.

#### Glowing Electric Table Stove

The instant the switch plug is inserted, the El Grillo coils glow cherry red and cooking begins -any two operations at once, one above and one below the glowing coils.

A deep dish for broiling thick chops; a medium dish for eggs, etc., and a shallow dish for frying cakes, etc. El Grillo rests on a tray so that the finest finished furniture is not injured.

Made entirely of pressed steel, nickel plated, with mirror polish. Ebonite handles, always cool. Heating Element guaranteed for 5 years. Price \$5.00. In Canada, \$6.50.

#### Send for this free "Home Book of Electricity"

Can you go to your meter and tell how much electricity you have used this month? Well, it is just such practical things that are explained in our 32 page Home Book of Electricity. You will find something interesting on every page, and we will be glad to send you a copy free. Use the Coupon in the corner.

Here are some of the chapter headings: Electrical Terms You Should Know — Electrical Troubles Explained — How to Figure Costs — Fuses — Evolution of Electrical Appliances — How to Repair Broken Cords — Electro Magnets — Dynamos and Motors—How to Read Your Meter — Care of Electrically Heated Appliances — Etc.

king Set, \$2.00. Canada \$2.50.

Owing to these facts several million Hothert appliances are in use all over the world. Every one guaranteed as to material, workmanship and life of element.

# El Boilo (immersion heater) three styles.

Plunge El Boilo into any liquid, put in the plug and shortly your liquid boils—that is the whole idea. El Boilo is a long, slender cylinder enclosing a specially efficient heating element. When submerged, every unit of heat is utilized, hence it is economical, convenient and sanitary.

#### Straight & Boile, small

In the bedroom, nursery or anywhere there is an electric lightsocket available, you can instantly prepare a hot drink, or a quantity of hot water with the small size El Boilo.

Men find it a great convenience for heating shaving water. Heavily nickel plated, polished to mirrorfinish. Furnished with 6 feet of flexible cord and removable plug.

Guaranteed 2 years. Weight less than I lb. Price \$3.00. Canada \$4.00.

#### Thousands of Distributers

electrical supply dealers, hardware stores, department stores, lighting companies, drug stores, etc. There are several thousand scattered over this country and Canada, and most foreign countries. Look for the Hotpoint sign in the window.

#### Straight & Boile, large

Made the same as small El Boilo, but is 10 inches long, and weighs a little over one pound. It attaches to any lamp-socket.

Especially desirable to heat larger quantities of water and for simple boiling operations in the kitchen—also for boiling eggs at the table, or heating water for tea or chocolate. Guaranteed 2 years. Furnished with cord and plug complete. Price \$4.00. Canada \$5.00.

#### Crookneck & Boile

Large size El Boilo made crookneck form so that it will lie flat on the bottom of a dish. Especially adapted for sterilizing and similar uses in Hospitals. Used by doctors and dentists, etc.

El Boilo lies clear to one side of the dish, giving access to the entire surface for the sterilizing operation. Guaranteed for 2 years. Furnished with cord and plug complete, Price \$5.00. Canada \$6.50.

#### We Fill Orders

If you are unable to find a distributer in your community, order direct, sending check to our nearest office and any of our appliances will be shipped prepaid at regular prices. We guarantee safe delivery. Be sure to state voltage. Ask your Lighting Company.

OHNS-MANV

#### HOW PLAYS ARE BORN

(Concluded from Page 15)

actualized on the stage instead of being realized from a larger point of view and so added to by the stage. The play did not succeed. The public con-

cluded that it would not pay two dollars to see something that could be seen for nothing. So much for plays born of ideas found in

the newspapers; but some of the best plays ever written have been born in the streets. Many who read this have, without knowing it, seen one that was born in a fog.

One blindingly foggy night in London,
Haddon Chambers and Paul Arthur were
trudging after an evening spent at a theater
to Chambers' quarters. Suddenly out of the
impenetrable fog that surrounded both
playwrights loomed what Chambers still
calls "a smear," "a stain on humanity," a
typical London tramp.

calls "a smear," "a stain on humanity," a
typical London tramp.

Chambers and the tramp collided; but
the tramp was quick with apologies. He interested the dramatist, who finally invited
him home for a bite of supper, much to the
disgust of his friend Arthur.

The man, whose name was Burns, accepted—"Thanking you kindly!" With
no thought of playwriting, Chambers seated
his strange guest at a supper, to be served
by Hogg, the playwright's valet; but, at
the sight of "such an 'airy, hawful, in fact,
'orrible specimen of humanity," Hogg's
sense of decency was so outraged it was
only after a sharp word or two from his only after a sharp word or two from his only after a sharp word or two from his master that the valet consented to serve the tramp. That flash of class distinction alone would have repaid Chambers for bringing Burns home; but the real reward came when Burns was, with great difficulty, finally persuaded to talk. "He was a Hora-tian without knowing it," Chambers says in telling the story. in telling the story.

#### A Play for an Overcoat

Asked whether he had ever worked, Burns, amazed at the thought, answered: "Certainly not! Work's for workmen!"

H. W. JOHNS-MANVILLE COMPANY, LM.

Burns' only friends in life turned out to be a cabman, called Nighty because he was at his stand all night, and other flotsam and jetsam, male and female, who, like himself, were sustained by the charity of the Salvation Army.

were sustained by the charity of the Salvation Army.

The strange party ended finally by Burns, "Thanking you all kindly!" politely bowing his way out and leaving the house with Paul Arthur's overcoat, quietly but effectively taken from the hall rack.

What Burns left, however, was a play—Passers-By—which has since earned the price of many an overcoat. The tramp's conversation had assembled in Chambers' quarters five unusually dramatic characters—a philosophic tramp; an eloquent cabman; an aristocratic valet; a woman of the street; and Chambers himself, who portrayed any young man fond of multiplying sensations with real life.

Chambers called his hero Waverton, from the name of the street where the playwright lives. And, with that, he had his characters and wrote his first act. He employed Burns by his real name; Nighty by his. His valet, Hogg, he renamed Pine, and the woman of the street he called Margaret Summers.

Then an extraordinary thing happened.

and the woman of the street he called Margaret Summers.

Then an extraordinary thing happened. He could not begin his second act! None of his characters would move. The love interest he wanted to create was blocked at every turn. He had his young man and his young woman, but Margaret's character contradicted any true love story. Six years went by before he found a solution.

Mr. Chambers visits his dentist not always as a dentist, but frequently for what a playwright calls "the outside point of view." It was during just such a visit that the dentist one day said to the playwright:

"How is it that nobody ever writes a play in which the modern Mary Magdalen, 'the lovely woman who stoops to folly,' gains some of the Christian sympathy accorded her in the New Testament? Why

accorded her in the New Testament? Why always ultimate disaster when we know it is not so in real life?"
"Done!" cried the playwright. "I shall

redeem Margaret Summers. She shall not be a woman of the street, but a good woman, misled by her very goodness and woman, misled by her very goodness and yet triumphing because of it in the end. She shall marry my young man, Waverton. "Whereupon," as Mr. Chambers puts it, "Passers-By began to write itself."

#### THE LAST ENTERPRISE

(Continued from Page 18)

and vague; but when he was near enough to see better, then it had risen again tantalizingly above his head, out of the reach of his ingly above his nead, out of the reach of his eyes. It called him in the morning light; it held something up there for him. But here at his feet was his pick; his undertaking; his enterprise; his gold. He grasped the pick; he dug; he sealed his ears and his

The insistence of the top of the mesa did not wane, though—it grew; it was con-stant. Now and then his petrified memory, stirring as though galvanized, told him he should be up there. There was something for him up there—something long lost, to be gathered up and reentwined in the fibers of his existence.

And one bright Sunday morning, as he squatted on the bank of the river, rocking

the gold out of the black sand he had mined during the week, he suddenly sprang upright, dropped everything, and went speed-ing drunkenly on his old thin legs to the mesa. When he reached it he did not stop; up the slope he had excavated, he scram-

bled painfully to the top. bled painfully to the top.

Now that he was up there, he did not know why he had come or for what he was searching. It was warm, for one thing, and very peaceful. There was grass all over, thick and high—it was just beginning to dry to the season's aridity; and a light breeze, passing now and then, stretched it into long, silvery shimmerings.

A thread seemed to attach itself to his heart and to turn gently; but when, obey-

heart and to tug gently; but when, obey-ing, he began to walk, he found that the surface beneath the grass was not flat and smooth as the grass made it appear. His feet were passing over a series of rounded swellings, like smooth, solid waves. And now and then they kicked up a little plank— a little plank polished white by the years and the weather.

There seemed to be many of these, lost at the bottom of the grass. A few stood upright and he stumbled over one.

The invisible thread continued tugging

at him gently. He walked, stepping high, placing his feet in the depressions between the earth-swells; with head inclined to-ward one shoulder, he seemed to be listening intently—listening to the behest of a memory which, though so old and faded it hardly was, would not let him go. At length he was in the center of the little plateau he had been so diligently demol-ishing. He stooped and parted the grass, and the movement revealed a stone there a river boulder that, long ago, had been smoothed and carved.

The indentation made by a rude but pa-tient chisel had long ago disappeared, but in the wound a lichen had taken hold—a lichen which, examined closely, was a tight tissue of hundreds of very small yellow flowers. And, written thus with these mi-nuscular flowers, on the stone an inscription spread:

ROSE WIFE OF TOM RAND, AND BABY RICHARD

The judge read. And now he knew why he was here. He saw again the vision he had had the first day in the deserted camp. He saw before a cabin again the young woman of sweet, buxom charm, with the little child in her skirts. But with that vision came others to complete it, to ex-plain it. He remembered now-ah, he remembered! And dropping to one knee, like an empty scarecrow collapsed, he began to grimace in the horrible and piteous weeping of the very old.

Forty-five years before, in this camp of Coyote Flat, he had been the friend of Tom Rand. And he had loved Rose, the wife of Tom Rand.

It had not been a loud and red passion, but a gray, wistful and dreamy affliction of the innermost fibers of his heart, half ecstasy and half ache, rising at times exquis-itely to a pang, of which he could not have told whether it was torture or whether it was heaven.

He was but in his early twenties then, yet for several years already he had knocked adventurously about the camps, very busy in concealing his real timidity beneath externals of swaggering wildness.

She was a few years older than he; she had come, but a child-bride, with her husband across the plains in the heroic period; and she was the glory, the pride, the treas-ure of the camp. All the men loved her, with the respectful chivalry of the time and the place. In that overwhelmingly male life she was the delicacy, she was the iri-descence, she was the dream. The knowl-edge of her being lay there at the back of the heads of all, even at the most rageful moments of their toil for gold, a restfulness, a heavy happiness. It made them think sweetly of their return to camp, of the long Sunday at the end of the week; it was as though each had had a home. Fleet sens-ings of her passed over them like pleasant zephyrs-her flower cheeks; her rose mouth; the pink of her calicoes; her firm, round arms, bare to the elbows; the fragrance of baking bread. Rose hanging against the sunset the long line of wash—even that, to

the camp, was an enchantment.

If they had been caressed by the radiance of her charm, he had been penetrated profoundly. And now, weeping, senile, on the little mesa, at the foot of the stone that bore her name, he saw himself again as he had been nearly half a century ago. He saw himself lounging about her cabin in long hours of delicious, half-sad idleness, during which all his energy of life, all his plans, had lain still, had lost substance, had evaporated; and his young strength itself had seemed to swoon.

The little girl, Bettie, gave him an excuse for long lingerings here. She was three years old, a miniature of her mother in her pink pinafores, with her yellow hair and her curiously maternal little air; he would play with her for hours before the cabin door. And the mother, going to and fro about her work, shed on him the moonlight of her charm, pierced him at times with a flashing blue smile.

Just what she felt toward him he did not now, he had never known. Perhaps she had been unable to tear out of her heart a certain happiness at his devotion. But her husband was to her her husband—there was no doubt of that; to her so much bigger, possessed of such patent superiority, that near him other men were all somewhat like children.

Her arms, bare to the elbow, were often floury; and a sweet odor of baking bread came from the cabin.

She was amused with him-that is how it was; a tender amusement that showed in her eyes. Once in a while the imp that is in all women sprang to the saddle, reined her to some small maneuver that almost killed him with joy: but immediately her amuse-ment bedewed itself again with compassion. One day she had kissed him. In an explosion of mischief at the sight

of his long, long face, she had suddenly seized that long face between her hands, warm and wet with suds, and had pressed a

kiss on his lips. For many years it had remained with him, the sense of that healthy, firm and sane kiss. He could feel it there on his lips now-and the memory on his cheeks of her

warm, soapy hands.

And that had been all.

That had been all.

She had died one day—with the baby boy

to whom she had striven to give life.

They had all stood there—the whole camp—one sunny morning on this little flat top. Tom, stiff and strange in black clothes, put on him earlier as though on a dall seemed only decad. The mount of the strong of the strange of the strong of the s doll, seemed only dazed. The ground was a bit resonant here, as though hollow. The boots cried on the stones. Some one had read out of a book. It was very still and very hot. A woman he had never seen had little Bettie; the child cringed in the woman's skirt.

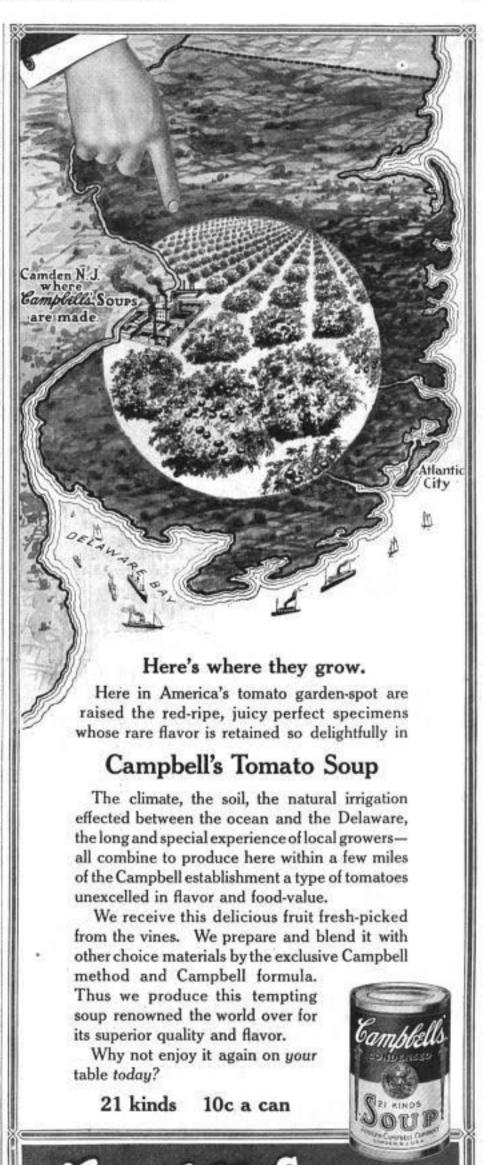

Plunk! A small shovelful of heavy soil had been abruptly dropped on his heart, his naked heart; and he had fainted. He had fainted right here on this little flat, before all those men, before the woman and the child.

He had fainted right here forty-five years before, before all the men. And yet afterward he had forgotten!

He had forgotten! And that was life!

The idea that he should be digging in this place for gold!

The idea that he should be digging in this place for gold now raised in him an uncontrollable grief; and, stretching full length along the stone, he wept in gurgles and falsetto sobs until a little rabbit, astonished and curious, peered with mobile nose over the edge of the mesa, and remained

with its two long ears petrified, watching seriously this heap of rags on the ground, from which came sounds so strange.

When, near sundown, the judge descended from the mesa, he was spent, like a child who had been through a tantrum; ap-

who had been through a tantrum; appeased his woe, and through his veins a pleasant peace was stealing. Nicodemus was down there, waiting for him. The judge's voice was low in the slanting light, distended, as was his whole being.

"Nicodemus, it's all off. It's all off, Nicodemus. Back to Frisco with us! And just a little poorer than we came! Don't you understand, Nicodemus? Why, it's so very simple! That mining scheme is off—do you understand?—all off. You see. off—do you understand?—all off. You see, Nicodemus, one can't do what we've been doing. It isn't the custom. It isn't

Noon of the next day saw the two already well on their way back to civilization. The road, between pines and carpeted with needles, looped downward toward the plain; the pack was light, with much less provision than it had held coming up, and without shovel, pick and pan. Master and beastie tramped alacriously. Suddenly the judge broke out in loud laughter:

"Say, Nic, think of all that gold we two left up there! Can you see those fat little bags in a row under the boards? Looking at each other out of the corners of their

eyes?
"Who'll get 'em? A rat, I guess. He'll
"The dust come gnawing at the buckskin. The dust will get into his nose and he'll think it's snuff. Snuff, Nicodemus!

"Ah, well, Nico dear, I guess it's the Old Folks' Home for me now. "Tisn't such a bad place, Nicodemus. I used to pass it once in a while in old Frisco. There's a bench in front, on the sunny side, and from it one can see the sea.

"And say, Nicodemus, you know, I didn't leave all the gold behind. You remember that little bag I was beginning to fill yesterday, just before I went up to the top of the mesa? Well, I've got that with me. Yes, Nicodee. It'll keep me in tobacco at the Old Folks' Home.

"I'll sit on that bench in the sun and I'll smoke my pipe; and maybe in the smoke sometimes I'll see—you know what I'll see, Nicodemus.

"Well, we haven't made our fortune, little donk. No; we haven't made our fortune. You see, our scheme was wrong from the bottom. One can't do what we were doing. It isn't the custom. No, Nico-demus; one can't mine a cemetery. It isn't done! Nope!

"Whoopee, Nicodemus! Let's trot. I'm beginning to pine for that Old Folks' Home!"

#### Hot Treatment

HEATING up an arm or a leg by electricity—not heating it from the outside, but equally all the way through—is one of the most recent uses of electricity in medicine.

In some forms of rheumatism, of neuritis and diseases of the joints, for instance, it has been found helpful to heat the diseased part of the body much above normal temperature; though, of course, this treatment is far from being a cure-all. It is like making an imitation of an electric stove or electric iron with a knee joint for a hot-plate, and is nothing like the old batteryshock treatments that gave one a pleasant

tingle.

The principle of an ordinary electric stove is very simple. If the right kind of current is sent through the right kind of current is sent through the right kind of iron plate, the current finds it hard to get through. The metal from one side to the other resists the current, and this resistance shows itself by heat. The entire plate becomes hot, inside and out, from the quarrel it is having with the electricity. It is in this way that diathermy, as the electric heating of muscle and bone is called operates. called, operates.

A high-frequency current of considerable magnitude is sent through the leg, because this kind of current will meet with much resistance; and the consequence is that heat develops along the path of the current. The electricity is kept on only a few min-utes at a time and may be regulated to give just the amount of heat desired. All beneficial effects come from the heat and not from the current itself. It is like having the benefit of a hot-water bottle inside of the joint as well as outside.

#### A LILY OF THE FIELD

(Continued from Page 11)

it on the bills of the next month in case she

was not able to carry out her determination to reduce expenses all at once.

Perhaps Marjory might have got along better during the next month, but one of her wealthy Eastern acquaintances came to visit her overnight; and charmed with what visit her overnight; and, charmed with what she thought the simplicity of Marjory's way of living, she stayed a week. It seemed so quaint to her not to have a butler or a personal maid, and to live in dear, tiny rooms; but Marjory felt obliged to give her a dinner, a luncheon and a tea, and to take her once to the theater.

She was so busy during the guest's visit that she did not have time to go to her mother's house for lessons in cooking and managing; she did not even go to market, but continued to order over the telephone. She knew that the bills during the visitor's she knew that the bills during the visitor a stay had risen enormously, but she thought she could cover them by her untouched eighty dollars. Her friends entertained her guest so lavishly that Grover grumbled at having to go out so much. That was his only complaint; but Marjory thought fearfully of the social obligations she was piling up and would somehow have to discharge.

The next month when the bills came in she looked at them anxiously but hopefully, for she thought she had been doing the best she could. Exclusive of rent they came to one hundred and thirty dollars. That was an improvement over the preceding month,

of course, but a small one when she con-sidered that she had spent her allowance and five-eighths over.

One evening while she was going over her accounts in her mind, wondering whether she really could have ordered this and that, sne really could have ordered this and that,
Grover handed her another check for eighty
dollars, remarking that the canceled check
for the other eighty had not yet come back.
"No," said Marjory absently; "I haven't
cashed it yet."
"You haven't! Marjory, what does this
mean, dear? You didn't let last month's
bills run on?"
Marjory has le into tory

Marjory broke into tears.
"Oh, please don't bother me!" she said;
and going to her room she locked the door after her and threw herself on the bed, tell-ing herself miserably that she was a failure,

#### Grover's Ultimatum

tell her she was not.

but really expecting Grover to knock at the door and make her let him in that he might

Grover, however, took his hat and went over to his father-in-law's. At the end of two hours he came back, to find Marjory pale and wasted with tears because he had

pale and wasted with tears because he had been gone so long and so inexplicably. "I've been having a talk with your father and mother," he began abruptly and with-out any endearments. "They've explained everything. I drew them a check for the money you begged of them last month. It took all the little surplus I had in the sav-ings bank. Perhaps I did wrong to marry a girl like you, Marjory—you should have taken some fellow with a big income; but my mother was a rich girl and learned to my mother was a rich girl and learned to be the wife of a poor man. I thought you, who had only been brought up as though you were rich, could surely do the same."

She began to protest that poverty did not matter when she loved him; but he held

matter when she loved him; but he held up a hand, compelling her silence.

"I'm not talking now to the woman I love, but to a prospective business partner. You can do one of two things—go back to your parents and live as you always have, an unthinking charge on them, or you can stay with me and live as I can support you; in which case you cannot be an unthinking charge, but will have to use every ounce of

brain you've got to help me." Marjory complained that he suggest sending her home just because she had been slow to learn. He heard her in silence and repeated his terms. Again she fell into tears. When the scene had been repeated several times Marjory realized that Grover would not pet and soothe her, but was indeed trying to enter into negotiations

with his business partner.

"I am very much in earnest," Grover said again and again. "I am trying to be patient with you, because your parents have said that if you are useless as a workaday woman it's their fault. Take all the time you like before deciding."

Oracle State Control of the

Even a "velvet" lawn is hard on hose. Constant yanking and tugging is also trying. It all means wear — and the hose without protecting rubber ribs will soon play out.

Goodyear Lawn Hose has six such heavy ribs running its full length—besides eighteen addi-tional corrugations. These add to the wear-resisting quality. Help the base to side over-ground and glide around corners. Reduce friction 80 per cent. Best of all, they prevent "raveling" and kinking.

#### Lawn Hose

The Construction

Five thicknesses of best rubber and tested braided cotton -- all cured into one solid unit --

insure years of wearing quality and service.

Goodyear Lawn Hose has more rubber than the average hose. This rubber won't crack, chip or quickly deteriorate, however exposed to ordinary rough handling and the

Such hose means real economy. When you buy it you buy once and for all.

#### How to Get It

You will know Goodyear Lawn Hose by the famous Goodyear trademark on every foot.

If your dealer happens to be out of Goodyear Lawn Hose, just send us his name. We will see that you are supplied immediately. by express, prepaid. Price in 50-foot lengths: three-quarter-inch, 10 cents a foot; free-eighth-inch, 19 cents a foot; one-half-inch, 18 cents a foot.

We recommend the five-eighth-inch. You will find its size and weight best for average use.

Write Us on Anything You Want in Rubber

When Marjory had exhausted her emo-tions she lay quietly on her bed going over her situation. After a time she sat up and

said:
"I choose to stay with you, John, and to
be your helpful partner. I'll save somehow
and make up that money you had to pay
back to my people. There's only one thing
I'd like to suggest: I don't propose to
blame any one for the do-nothing sort of
creature I am, and I don't propose to ask
much help in learning to be different. What
I want to know is this: Will you back me
up in whatever form my attempt at econ-

I want to know is this: Will you back me up in whatever form my attempt at economy takes, even if it is hard on you?"

"I'm willing to pay whatever I have to while you're learning," Grover said; "for I'm guilty too."

Some days later Marjory proposed to Grover that they should rent their apartment, furnished, for nine months to a young married couple she knew, who lived in a hotel but wanted to try housekeeping. She had been to see them and had proposed to rent her flat for sixty dollars a month. She suggested to Grover that she and he should live in a flat in a model tenement in the poorer part of the city.

should live in a flat in a model tenement in the poorer part of the city.

"I can subrent one, furnished, until the warm weather, for eighteen dollars a month," she said. "There are some nice people in the building—settlement workers and artists. We'll not be lonely. It may seen quixotic to you, but I want to get right down to fundamentals. I'd like to live in that quarter and see how poor women manage who do it on twelve dollars a week or less. Besides, if we live away from our friends we shall not have to entertain or be entertained so much; and we can come entertained so much; and we can come back to our home ready to form new habits."

#### Hard Lessons Worth Learning

Grover agreed; and so his lily of the field began to turn herself into something useful. She found her new life hard, for she did all the work herself—even the cleaning, though Grover objected to that. Marjory, however, wanted to work up from the beginning. She learned from the Yiddish butcher how to judge meat; and she saw, with sur-prise, the discrepancy between the prices she had formerly been charged for roasts

she had formerly been charged for roasts and steaks and the prices she now paid. She read every day in the newspapers the lists of prices for staple foods. She learned to weigh, to a cent, the values of prunes of various grades; and she grew to hate the sight of a prune. She knew sixteen ways of serving potatoes, because, in her first fervor of making up what her extravagance had cost her husband, she fed him almost nothing but stewed mest and potatoes.

for he saw that stewed mest and potatoes. Grover never complained, for he saw that her mistakes were on the right side.

Marjory did not have to give up all her friends. She simply learned to discriminate between the few who cared for Marjory and the many who cared for Marjory plus the conventional expensive things with which Marjory used to be surrounded. She found, after her first disappointments and snubbings, that she was perfectly happy snubbings, that she was perfectly happy with those who took the trouble to seek her

with those who took the trouble to seek her out and were ready to accept the simple entertainment she offered.

When her nine months' apprenticeship was over Marjory had lived on various allowances, ranging from forty dollars a month to eighty. She had put her mind on her work and was able to talk to her mother almost as an equal in housekeeping. Her hands were not so well kept, but her brain was kept much better. She went back to her home with the feeling of a sinner who has worked out a well-deserved punishment. She almost felt as though she ought to give up the flat because it cost two dollars and a half a month more than Grover at first inhalf a month more than Grover at first intended to pay; but, after all, it was home— and it was likewise a good deal of trouble to move. She did not want to be quixotic.

She used only sixty or sixty-five dollars of her allowance of eighty, putting the balance in a savings bank. This economy she kept up for two years, despite the fact that Grover's salary had been increased to twenty, two hundred dollars. Maximum twenty-two hundred dollars. Marjory, however, said she was even happier when saving than she had been while spending.

ed that promised to increase their scale of expenditure some three hundred dollars a year. Prudent Marjory welcomed the expense and made

no plans for cheeseparing; but she did say, when the event was but ten minutes old: "John, of course she's beautiful; but does she look as though I could bring her up to be useful?"

#### *The gentlemanly thing*

(Continued from Page 9)

course, belonged to another order of things; but in the case of a junior clerk a pair of light-gray spats was certainly going rather far. Still, when all the facts of Mr. Hartshorne's amazing triumphs at Sheercliffe-on-Sea had been adduced, the more impressionable members of the staff were inclined to feel that, after all, there might be something to be said in their favor. Nevertheless incredulity tempered by disrespect was the prevailing emotion. Indeed, before the week was out Mr. Hartshorne was christened Lady Mary.

Mr. Hartshorne was too much of a gentleman to show annoyance at such a crude form of wit. He was seated too firmly on his throne to fear the opinions of those dwellers in outer darkness who had never seen Sheercliffe-on-Sea—let alone having been to tea at the Majestic. Indeed, he was inclined to take his courtesy title in the light of a compliment; and at the in-credulity of his colleagues he could afford

to smile. Mr. Burrows, however, the ever stanch and faithful, lived in a kind of reflected glory. Was it not he who had driven in a taxi to Liverpool Street on that historic Saturday afternoon to see Mr. Hartshorne off by the 3:20? The taxi and the second-class return to Sheercliffe-on-Sea could not be denied; so what reason was there to dis-

credit the Hotel Majestic and Lady Mary and Viscount Cardew?

Then there was Debrett. A freekled youth named Templeton, who wore pince-nez and was the acknowledged descendant of an Anglican clergyman, and was singularly cynical and well-informed in consequence, offered to bet Mr. Burrows a shilling that

the Cardews were not in Debrett.

Mr. Burrows took him up at once, with great gallantry, though it was the first time he had heard of Debrett. He did not let on, of course, to young Templeton that such was the case, but looked very contemptuously at that skeptical youth, booked the bet in his pocket diary, and promptly carried the terms of it to Mr. Hartshorne.
"I say, Bertie, old man," he said breathessly, "what do you think of that conceited young ass, Templeton? He's had the cheek to bet me a shilling the Cardews are not in Debrett."

"Not in where?" said Mr. Hartshorne with a slight fatigue in his manner. Indeed, is admirers had noticed already how well slight air of fatigue went with a pair of

"In Debrett," said Mr. Burrows.
"I don't know about Debrett," said Mr. Iartshorne, "but I do know they are in rosvenor Square; and IA is their number."
The fact was, Mr. Hartshorne himself as not quite clearer to what Debrett might

as not quite clear as to what Debrett might e; but he was far too much a man of the orld to confess his ignorance. He was uner the impression that it might be a housegents' list, but judicious inquiries that vening of a well-informed acquaintance t the Bagsworth Imperial Club gave him

truer insight into its nature.
"Oh, you mean the Snobs' Bible!" said
well-informed acquaintance, who was

the Press.
"Where can I see it?" asked Mr. Hartssgrace to sit at the feet of this Gamaliel.

"In the British Museum, I expect."
In the company of Mr. Burrows Mr. artshorne went to the British Museum on e following Saturday afternoon. They ould settle young Templeton's hash for m. He was the grandson of a parson, so said; but there was no youth in the city ore urgently in need of being taken down

At the British Museum there was a ficulty about admittance to the room in ich Debrett enjoyed it being, owing to ather stupid display of red tape on the

"t of an official, who was unable to pass in through without a ticket.
"We only just wanted a glance at the obs' Bible, you know," said Mr. Hartsne with his slightly fatigued air, which Burrows felt he had never heard to ter advantage.

'Cannot help that, sir," said the official. ou can't see a Common Prayer book here hout a ticket."

Where can I get a ticket?"
'At the office, I expect."
At the office, however, they wanted a seholder's reference and other absurdces of ritual, which struck Mr. Hartshorne

as such a ridiculous display of red tape that he suddenly left the building in a huff, for all his fatigue, and vowed he would try the Free Library at Bagsworth.

At the Free Library at Bagsworth they were more sensible; but they were too dem-ocratic to keep a Debrett. They thought, however, the Carnegie, at the end of the road, might be able to meet the case

road, might be able to meet the case.

Mr. Burrows won his shilling. Debrett, at the Carnegie, said: "Cardew—see St. Quentin." After tracking William Philip Ambrose, fifth earl, through several pages of most intricate ramifications they were rewarded by "Viscount Cardew, b. 1889; Pea-green Guards"—and so on; and "Lady Mary Evelyn Angelica, b. 1891." Mr. Burrows took pains to copy out these facts and claimed his money at quarter past ten on the following Monday.

It is no more than the due of young Templeton to say that he took his defeat like a sportsman and paid his shilling with

a grace that became his lineage.

The incident made rather a sensation in the office. Even the most virulent opponents of the light-gray spats insensibly modified their attitude a little. Mr. Hartshorne's manner grew increasingly fatigued in consequence; but he was not really insufferable—at least Mr. Burrows would never allow that he was. It was certainly true that he became still more exclusive at the Bodega. He had no longer that friendly lightness and grace in his intercourse with Tom, Dick and Harry. It was no longer safe to call him Bert; there were times when even Mr. Saunders, his old schoolfellow, hardly liked to venture it. He was a lonely, inaccessible spirit now. Mr. Burrows alone in the office was admitted to his regard. And even he was far too full of tact ever to

Yes; Mr. Albert Edward Hartshorne was a changed man. He had entered his kingdom. He stuck to the light-gray spats so manfully that, with the aid of Debrett, in a surprisingly short space of time he had lived them down. He was not exactly popular, but he was admired. His voice was really very fatigued at times, and in moments of high inspiration a slight lisp was superimposed on it; but, as his faithful henchman, Mr. Burrows, said, if you were a born nut you were justified.

presume on it.

"YOU haven't called yet, Bert," said Mr. Burrows tentatively as one day they walked along Leadenhall Street from the

"No; but I shall," said Mr. Hartshorne rather wearily, "as soon as my tailor fellow has finished my new morning coat."

Had Mr. Burrows not been of the faithful this reference to a new morning coat might have been interpreted as swank, because Mr. Burrows was aware that his distinguished friend had yet to possess an old one; but in real greatness little weak-nesses are condoned—they strike such a human note. They give those on a higher plane of being a little in common with humanity at large; and it behooves human-ity at large to be grateful accordingly—at least that was the view of Mr. Burrows.

"Will it have braid on it, Bert?" said the ever-faithful henchman. No one was by, so the "Bert" did not matter. "What do you think?"

The answer was jocular, but very urbane and Cardew-like in its ease and charm; but Mr. Burrowssomehow felt a tinge of shame. His plebeian question had been rebuked in

a gracefully patrician manner.

Life was not altogether a bed of roses for
Mr. Burrows. His friend took a lot of living up to; for Mr. Burrows, with all his keen appreciation of nuttiness in others, from being a nimseii. Nature had not designed him for the course and he was acutely conscious of the fact; but he did his best to conform in speech and manner to the ever-rising standard of his friend. He made howlers sometimes, and his cheek often burned in the watches of the night when he remembered he had made them. Still, if you are not a born nut you cannot help committing little solecisms now

Nevertheless Mr. Burrows did his best to live up to Lady Mary; and, making every allowance for an incurable absence of style, it was a very good and honest best, and Mr. Hartshorne, like the large-hearted and liberal-minded man he was, counted it

to him for righteousness—though some-times in public he patronized him fearfully. One day—to be precise, the day before the braided morning coat was due from the artistic tailor in the Strand to whom had fallen the honor of devising its being—Mr. Hartshorne sauntered—literally saun-tered—into the acting submanager's room at about quarter past eleven.

The acting submanager was a sour and satirical man, with a rather acid way of looking at life.

"Well, Mr. Hartshorne, what can I do for you?"

The acid way of looking at life remained just now with the acting submanager, who had not yet got over his spats. Indeed, he certainly looked as though he knew what he would like to do with Mr. Hartshorne.

"May I have next Thursday afternoon off, sir?" said Mr. Hartshorne, with so much fatigue in his manner that, instead of asking a favor, he might have been conferring one.

"Want to call in Park Lane, I suppose?"

said the acting submanager with a considerable display of acerbity.

"Grosvenor Square, as a matter of fact," said Mr. Hartshorne in the way that Cardew himself would have said it.
"Oh!"

Oh! was all the acting submanager said at the moment; but he stroked his chin—one of those square and aggressive chins rather thoughtfully.

He had heard the Lady Mary story from

the lips of a thrilled subordinate; and, being a pessimist by nature, his longing at that moment to kick Mr. Hartshorne nearly overmastered him.

"What are you going to do there, Mr. Hartshorne? You have not taken a house there, have you?"
"No," said Mr. Hartshorne, quietly ignoring this banal piece of irony; "but I have an invitation from my friend Lady Mary Cardew to meet Prosser?"
Who the devil is Prosser?"

It was abundantly clear, of course, that the acting submanager was not acquainted with the works of the author in question, but he had no need to go out of his way to be vulgar when he confessed his ignorance. "John Michael Prosser," said Mr. Harts-horne with patient impressiveness, "is the

celebrated novelist."
"Never heard of him," said the acting

Mr. Hartshorne knew that. But in Mr. Hartshorne's opinion the time had come to administer the coup de grâce to the acting submanager. Accordingly he proceeded to do so. Very slowly he produced from his pocket a coroneted envelope and handed it in silence to that gentleman.

For a moment it almost seemed as if the

acting submanager were going to be actively ill. With an effort, however, he was able, and by the courtesy of that Providence which watches over acting submanagers, to over-come his nausea. And then he read:

"Saturday. 1A, Grosvenor Square, W.

"Dear Mr. Hartshorne: It will be so pleasant if you will come to tea on Thursday at five o'clock, to meet John Michael Prosser. Do come if you can. He knows how you admire him.

"Yours sincerely, "MARY CARDEW."

The acting submanager folded Lady Mary's note, returned it to its coroneted envelope, and handed it, without a word, to Mr. Albert Edward Hartshorne; but such a look of yearning had entered the eyes of the acting submanager as to give them that quality of soul they might be said to lack as a rule.

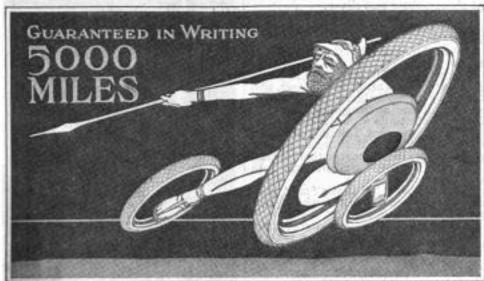

reasonable to suppose acting submanager would have made some attempt to behave like a gentleman, even if he was not one at heart; but he merely tugged at his straggling gray mustache, which gave him such a look of commonness, and glared from behind his spectacles. "It really seems to me, Mr. Hartshorne," he said at last in his metallic voice that

was so unpleasantly reminiscent of the prov-"that the time has come when the Palatial will be well advised to dispense with your services. It is not the custom for its junior clerks to attend afternoon parties in Grosvenor Square."

"But this is an exceptional case," said Mr. Hartshorne quietly but firmly.

# \$5,000 in CASH PRIZES TIRE MILEAGE CONTEST

#### FOR EMPLOYED CHAUFFEURS ONLY

GAIN we urge owners of cars, since there are impor-Atant benefits, to encourage their chauffeurs to enter the Second Ajax Tire Mileage Contest for employed drivers, now in progress. A good driver is inspired to become a better one, to conserve the mileage built into Ajax tires, to properly care for and keep tires inflated, to increase the life of tires in miles and to reduce the cost of motoring in dollars.

The interests of owners are protected in the Ajax written guarantee of 5,000 miles, while we reward with 208 important prizes, totaling \$5,000, highest mileages beyond this 5,000 mile figure. In case of ties, a prize identical with that tied for will be given each tying contestant.

Investigate! Know how much better are Ajax tires.

"While others are claiming Quality we are guaranteeing it."

"A very exceptional case, I should think," said the acting submanager.

The acting submanager, however, having no pretensions to be considered a gentle-man, could hardly hope to appreciate the case's exceptionalness in all its aspects. He gave his vulgar mustache another tug and

continued to glower.

"Look here, Mr. Hartshorne," he said at last; "you can have Thursday off on one condition. And the condition is that you accept a month's notice from to-day from the Palatial Insurance Company.

the Palatial Insurance Company."

Mr. Hartshorne was completely taken aback for the moment. It was a blow in the face, and he felt he had done nothing to deserve it. However, the great soul that had conquered Lady Mary and had forced the portals of the Majestic did not desert him in this tragic hour.

"Sir," said Mr. Hartshorne, drawing himself up to his full height, "I accept your ultimatum."

It was pure Prosser, and subconsciously the great soul of Albert Edward Hartshorne was rejoiced in that sublime fact. But the

was reported in that subline lact. But the acting submanager was an underbred man who did not know his Prosser. His lip curled contemptuously.

"Very well, Mr. Hartshorne," he said.
"A month from to-day! But you are behaving like a fool. It will be a long while

having like a fool. It will be a long while before you get as good a situation as the Palatial with such opportunities for better-ing yourself. Your shorthand is not good enough."

His shorthand! In Mr. Hartshorne's opinion that was a sublime touch. Poor earthworm, burrowing in mire! How could any man speak of shorthand at such a moment as that!

"Sir, I accept your ultimatum." said Mr.

"Sir, I accept your ultimatum," said Mr.

Hartshorne again. He bowed to the acting submanager with aloof dignity, turned on his gray-spatted heels and withdrew Prosser-like from the room.

"I HOPE he's coming, Mary," said Sybil de Gex, preparing to bite a large plece out of her cake. "I've given up a matinée on purpose, you know."

This was spoken to the hostess in a confidential tone. She reined have a little of the confidential tone.

fidential tone. She raised her own a little

in reply.

"Of course he'll come, Sybil. I know nothing will induce him to miss John Michael Prosser."

John Michael Prosser sat very modestly in a corner of the immense drawing room, balancing a rather wabbly cup in a rather uncertain saucer on a rather nervous knee.

John Michael Prosser was a funny little old lady in blue spectacles, and she beamed with anxious pleasure at Lady Mary's remark.

To Miss de Gex belonged the brilliant discovery that John Michael Prosser was in real life a certain Miss Agnita Shrubsole, a former governess of the Blenkinsops. The Blenkinsops, it seemed, were some rather quaint people who had come to live next door to the famille de Gex in Cadogan Gardens. Gardens.

Gardens.

But the undefeated Sybil, having once scented her prey, tracked her through Pimlico, through Bayswater, and finally to Wimbledon Heath, where, having run her to earth in that sylvan retreat, she brought the poor old lady thence, small and sparrow-like, and rather anxiously smiling, to all the splendor of 1A, Grosvenor Square.

This is not the time or the place to dis-

This is not the time or the place to dis-play the Odyssey of Miss Agnita Shrub-sole's heart as she sat pecking, without much of an appetite, at one of Mr. Rumpelmeyer's choicest cakes in a remote corner of this almost bewilderingly aristocratic interior.

She awaited the arrival of a most en-thusiastic admirer, who, though not in the Guards himself, had had a father who had commanded them, and who had been simply

thrilled to the marrow by John Michael Prosser's wonderfully vivid and lifelia-pictures of that too-little-known branch of His Britannic Majesty's service.

The hour of five was told by a wonder-fully melodious clock on the nearest of several chimneypieces that this great room could boast, which, however, was com-pletely overshadowed by a Biblical subject from the brush of Titian.

"It must be so interesting, Miss Shrub-sole, to be able to write," said Lady Mary as she gave John Michael Prosser her third

cup of tea, for all that she had not yet faished her first piece of cake. "It is so cleve
of you to write as you do. I wish I could."
Lady Mary was lying quite agreeably in
the cause of conversation. She neither
thought it clever to be able to write like
John Michael Prosser, nor had she the least wish to emulate the poor old thing in the queer old bonnet perched on the top of her absurd old head; but something had to be said, and to be said very pleasantly, because the proceedings were rather in-clined to drag a little in the absence of the Prince of Denmark.

John Michael Prosser, by herself, was not showing much sport for the members of her

own sex. She was too undercharged and wary to give them much of a run for their money. Dorothy and Pauline were frankly

money. Dorothy and Pauline were frankly
disappointed—they had counted on a
Bonnie Edith at least; but poor, harmless
John Michael was almost a lady.
"I shall be so disappointed," said Sybil
de Gex to her hostess at ten minutes past
five, "if he leaves us in the lurch! I ddn't
know that anything quite so priceless was
in existence." in existence."

Nevertheless the minutes passed and Mr. Albert Edward Hartshorne did not Mr. Albert Edward Hartshorne did not appear. However, the totally unexpected arrival of Cardew at quarter-past five seemed to help matters a little. Cardew, it appeared, had quite definitely refused the invitation to be present at the meeting. Somehow he did not think it was quite going to be cricket. It was so like a man not to have a sense of humor.

Cardew came in looking a little duler than usual. He was carrying an evening paper. When he had had time to glance at John Michael Prosser, who as the minutes passed seemed to grow smaller and nove insignificant and less articulate in her cor-ner by the Adam chimneypiece, Cardew shook his head rather solemnly at his sister. "No, Moll," he said in a solemn whisper: "I was afraid it wasn't quite going to be cricket."

"He hasn't come yet," said Lady Mary hopefully.
"He won't come now."

"Of course he'll come—unless he has

been gathered to his fathers."

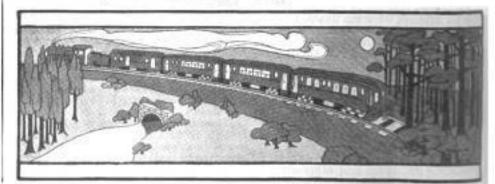

"Well, he has been, it appears. My eye fell on this at the club and I've brought it to show you."

Cardew had opened the evening paper. He pointed to a short paragraph, set in an inconspicuous place at the bottom of the page:

#### A CLERK'S TRAGIC DEATH

An inquest was held last evening on Albert Edward Hartshorne, twenty-three, of Arcadia Villas, Bagsworth, a clerk in the service of the Palatial Insurance Company. Leadenhall Street, E. C., who lost his like in a gallant but vain attempt to rescreta woman from drowning in the Thames. The jury returned a worder of accidental data jury returned a verdict of accidental desti-and, though highly commending you? Hartshorne's conduct, added a rider to the effect that it was most unwise for persons who were unable to swim to venture out of their depth.

That fascinating smile of Lady May's had something perhaps a trifle odd in a "That's so like a British jury," she said—"no sense of romance! They don't seem to realize that, after all, it was the gentlemand

#### The gay and festive CLAVERHOUSE

(Continued from Page 5)

It's deadly to me to be agitated and bothered as you're agitating and bothering me now." At this she drew her two hands across her two eyes, moved to the chair, seated herself and clasped her hands tightly. "I'm listening," she said, making what was clearly a tremendous effort at self-

control.

"Very well," said the man, "I'm speak-ing." He cleared his throat, folded his arms and closed his eyes. "I know a girl arms and closed his eyes. "I know a girl who has professed to be madly in love with me for ever and ever so long." Then speak-ing slowly: "I know that I've never loved her, and I've told her so over and over again; but she won't believe it. She keeps declaring that she'll win me some day. She says that some time I'll be in bitter straits and turn to her. Then when I'm desperately in need she'll go through fire and water to save me. And after I'm saved I'll love her passionately, and we'll be happy then offers and forever. Thes's her view of thenceforth and forever. That's her view of our case. I don't say what I've always thought myself, but Fate has stood by her thought myself, but Fate has stood by her enough to have it come to this—that I am in bitter straits, and seeing the way she feels I'm going to take her at her word and see what her word is really worth. She has only wanted a chance to prove how much she feels and how thoroughly she means what she says. And now I'm going to give her that chance."

He paused and Madelsine leared for

her that chance."

He paused and Madeleine leaned forward, almost breathless.

"What do you mean?" she gasped.
Claverhouse coughed. "Quiet and rest might do something for me; and it's just possible I might marry a woman who would keep me alive from day to day by administering it sweetly and conscientiously. I don't say that I would; but I might." He

don't say that I would; but I might." He paused again.

"Yes, yes," she whispered quickly.

"I've been inquiring into the matter," he went on, "and there's Yewstones, the property of our uncle. It's retired and suitable. I ask nothing; but your mother might negotiate with the agent, and after you and she had taken it and were settled there, you might ask me to visit you and I might come. Of course there's no time to be lost, because I'm pretty far gone; but if you feel like taking the matter up this is my ultimatum. That's what I wanted to my ultimatum. That's what I wanted to say. That's why I sent for you. Don't bother me with any 'ifs' and 'ands,' but go

straight home at once and see what you can
do. I've put my life in your hands. Do as
you please with it."

With a sudden fling of his head he turned
from her and lay quite still. She was staring intently toward him.

"And my mother?" she said, very low.

He made no answer. She arose then,

He made no answer. She arose then, standing motionless.

"I will go home and try." Her voice was very uncertain. "I will make every effort. Perhaps mamma will consent; but I can't be sure. Yewstones is in the north, isn't it?"

"Quite so," he answered.

"If we cannot get it?"

"I won't go anywhere else."

"Our own place in Wilts is —"

"I won't go anywhere else."

"But if the —"

"But if the

"I won't go anywhere else."

It might be fancied that such speeches

It might be fancied that such speeches would naturally irritate; but Madeleine Wythe was absolutely mad with love for the man stretched there before her.

"Ernest!" she pleaded.

Claverhouse extended his hand, seized the whisky bottle that stood on the table and hurled it against the wall opposite. It banged and shattered with an awful crash. The valet rushed in at once. The valet rushed in at once.
"My nerves are in a fearful state," said

the invalid, turning his head. "Clean up that mess, Conrad!"

Very quietly Madeleine turned and left

the room. The valet was sopping up the spirits with towels.
"See if they're gone," his master said presently. He went to see and reported in

he affirmative.
"Wonder when Beck went!" drawled

Claverhouse,

YEWSTONES! At this season!" The countess opened her eyes widely. Why of course you can have it. Nobody s ever there now. I believe the shooting is

all let away, because of the ghost or the damp or something. People never liked it. We haven't been there ourselves in years. But why do you fancy doing such a weird thing?"

Madeleine Wythe's mother shook her head. "I don't know exactly. Mygirl needs quiet, and Vivian—I think it was Vivian—

quiet, and Vivian—I think it was Vivian—suggested Yewstones. He used to be there as a boy, I believe, didn't he?"

"Oh, yes"—the countess' tone was mildly indifferent—"Gregory used to send the boys there a lot. We were always hearing of some way in which the heir had been maimed by Ernest at Yewstones. Still, if Vy went under Ernest came on; and we always rather loved Ernest, wretch that he was—and is."

Lady Wythe moved uneasily. "He's so

was—and is."

Lady Wythe moved uneasily, "He's so ill," she said quite softly.

"Dying, I thought," returned the countess brightly. "Sir William looked in after his diagnosis, his blood examination and all that, to tell us the truth. Gregory was quite depressed. . . . But as to Yewstones now, you know it'll be ghastly lonely. You'll never stop there more than a week, I'll wager. Rats, bats, walls ten feet thick. They used to drive the cattle into the chapel during the border raids, I'm told. It's an awful hole."

Lady Wythe, looking very ill at ease,

awful hole."

Lady Wythe, looking very ill at ease, dropped her eyes over her outspread fan and ielt extremely unhappy.

"I must get off to some quiet corner. The physicians feel that Madeleine is rather overdoing it."

"And I was just thinking how well she looked," the countess declared, staring across the ballroom. "How can you call her fagged? She's positively blooming to-night."

Lady Wythe lifted her eyes at that and glanced to where her daughter floated opposite.

glanced to where her daughter noated opposite.

"It's her nerves," she said in almost a
whisper. "Nothing else."

"If it's her nerves they'll never come right
at Yewstones," asserted the countess confidently. Then suddenly she became really
serious. "It's the worst old hole in the
county, and I don't know what besides. I
wouldn't sleep under its roof again for worlds
myself. You'd hate it."

"But I want it," persisted Lady Wythe.
"Vivian has talked of it till Madeleine has
set her heart on just that one place. It's its

set her heart on just that one place. It's its solitude that attracts her, I believe. I really

do want it. Then the countess put up her lorgnon and looked at her friend with close attention. "There's something back," she said. "Either you're keeping it from me, or ——"
"I'm keeping nothing from you," de-

clared the other.

clared the other.

"Then they are keeping something from us. Gregory told me that Vivian was asking about it. What mystery is it? Are you taking Vyvie with you?"

"No," said Lady Wythe, "by no means. To tell you the whole truth, all I know is that Madeleine has begged me, as a personal favor to her, to take Yewstones—no other house in England—and live there for six months. I do not know why. Madeleine confides very little in me. If I thought that Vivian had much to do with the plan I should be only too happy." The mother could barely restrain her tears as she spoke. she spoke.

The countess nodded wisely. "Depend upon it, he has something to do with it. Madeleine is plotting a bit, as girls love to do. Only some very serious and united thought could spring from Yewstones as a base. You shall have the place, my dear, and Gregory will get a line sent Shandy as to cleaning it up and getting in firewood, and all that. You'll take your own servants, of course?"

"Naturally."

"Then do not trouble as to other things. If we can help to bring Vivian's affair out smoothly we'll be only too happy. The poor fellow's been looking so knocked up lately. It's too bad of your girl, it really is, you know.

"It's not my fault, dear."
"I know it's not. But possibly all's on the road to mending now. Let us hope so."

The countess rose and moved on to other guests; but Lady Wythe remained seated and thoughtful. She had much to trouble her in the behavior of her beautiful and

headstrong daughter-the daughter who headstrong daughter—the daughter who
would not accept a possible fiancé with
Captain Beck's prospects and who would
persist in loving his reprobate cousin.

"What does possess girls nowadays?"
she asked of herself tearfully, recollecting
her own calm betrothal and most correct
married life.

Loter going home in their broughers

Later, going home in their brougham, she said to Madeleine: "I spoke to the countess about Yewstones."
"Is it to be ours, then?"
"I think so. The earl will send word to his agent to have it put in order."

his agent to have it put in order."
The lights of Grosvenor Square were The lights of Grosvenor Square were flashing in bright succession past Made-leine's gaze. "I'm glad," she said briefly. "We can be there by the first, then?" "Possibly; soon after anyway." There was a little pause, and then the daughter said: "Surely you know who will visit us there?"

There was that in her words that suddenly froze the mother's heart. "Madeleine!" she stammered. "He — "
"I know" — the daughter's voice was stilly calm—"I know that he is dying. Everybody believes it. Well, I have seen him — "

him \_\_\_\_\_"
You have seen him!" cried the mother,

"You have seen him!" cried the mother, starting in her seat

"I have seen him. There is just one chance for him to recover—a home life of love and care. I mean to give it him if it wrecks my whole future to do so. It is no use to discuss the matter with me. I mean to give him that chance."

Lady Wythe learned back as one description.

Lady Wythe leaned back as one deprived

of all sense and strength.
"Oh, Madeleine!" It was a moan.
"It is no use, mother, not the slightest use. I have never loved any one but Ernest and I never shall. If he does not live to marry me I shall never marry. Never! Never!"

There was silence after that, and silence

after they reached home.

But the next afternoon Lady Wythe went to see Claverhouse, and the call was prolonged. When later she met her daughter in her boudoir, just before the dressing hell she said:

bell, she said:
"I have been to see Ernest and to ask him to stop with us, and he has accepted my invitation."

It was then Madeleine's turn to start in

"And all is settled now as to Yewstones.
We shall go down on the third," continued her mother. "He will come on the sixth.
We shall need a day or so between to set his rooms in order."

You've heard from the agent, then?" "Yes; all the arrangements are complete.

Madeleine seemed lost in thought. "I hope that he will grow better there," she said to herself.

Her mother said nothing. Within her soul she hoped to heaven that Claverhouse would die there, and that there would be an end of him. She and Beck and not a few others were united in their view of the Honorable Ernest. But Madeleine Wythe adored him.

IT IS one of the cruelest facts in life that one who does a thing may never know what he does until he has done it. This is a fixed law and was promulgated on the day a fixed law and was promulgated on the day that humanity was turned loose to try to find a way to avoid it by pleading, not ignorance but omniscience. On that day men and women began to fancy that they could know what they were doing before they did it. But the majestic might of any law is not to be altered. And so life moved on and tried to ignore the unalterable truth. It followed that no woman who loved ever knew what she did until it was all over; but every woman, aye, every girl of seven-

but every woman, aye, every girl of seventeen, was quite positive that she knew, and acted accordingly. Also no man ever planned anything whatever really open-eyed as to the consequences; but every man, young or old, is positive of being himself the one and only exception to the rule. We are all born blind, live blinded and die blindly. And we none of us ever admit it. Thus God has ordained, Allah has evidently willed

and Satan has most certainly determined. All of which incontrovertible and philosophic reflections applied strikingly in the case of the coming of Claverhouse to Yew-stones. For the plot worked out as the plotter had planned and he came hither to be nursed back to health, if that were pos-sible, by the sweet retired life of "deep-in-the-country," and the affectionate and

solicitous ministrations of one who really

worshiped the ground he walked on.
But, to revert to the statement which opens this chapter, never did any one in this world of unforeseen developments do anything with less idea as to the actual finale than did Madeleine Wythe when she undertook to save Claverhouse's life, if such a

saving were possible.

The whole affair, indeed, was bound to be unlike anything else that ever had happened, simply because of the man whom it concerned; but how unlike was altogether

Neither Lady Wythe nor her daughter had ever had their cousin to stop with her before, for the simple reason that as soon as Madeleine fell in love, Claverhouse began to avoid her. He had not avoided her altogether, but he had dropped all cous-inly intercourse. Lady Wythe disliked him, disapproved of him. It had all been most unfortunate. And now things were to be brought to a head.

But what a business it all was! In the first place it had been comparatively simple to give the invitation, receive the acceptance, and travel down to Yewstones. But Yewstones was, despite vigorous preparation, anything but the ideal country house into which to bring an invalid. It was a huge old place with window embra-sures six and eight feet deep, and a stone-arched entrance from which the drawbridge had been withdrawn for less than a century. It was all ups and downs, three steps here and seven there, with oak paneling; long, heavy, dark hangings; and stone floors that felt cold and hard through the thickest rugs. The pale September sun-shine could not possibly get within and at night the candles and lamps seemed smoth-ered by the overhanging darkness. Under these circumstances it was but to

be expected that the installing of a London environment should prove more than a little difficult. The time was very short and the work very arduous. It was like-wise natural that Lady Wythe should be much depressed by the gloom and chill of the place, and should feel anything but joyous as on the appointed day she awaited in the drawing room the arrival of her unwelcome visitor.

She was trying to be trustful and courageous, but she had small faith in her hold on either of these virtues. Claverhouse had assured her of his good intentions, but no one believed anything that he said, for it was never possible to divine just what he meant when he uttered statements. Small wonder, therefore, that the mother sighed as she waited.

Conrad had wired the hour they were Conrad had wired the hour they were leaving in Claverhouse's touring car. If all went well they should arrive just before tea. It was quite four now. Madeleine was upstairs, giving some last personal touches to the suite set apart for the invalid, his nurse and his valet. This was in the opposite wing from the apartments occupied by her mother and herself, and consisted of large, stately, paneled chambers, as were all the rooms at Yewstones.

"I do hope he will be in time," said Lady Wythe to herself, looking at the clock. Nothing told her that he would be in time; for it was not at all certain that, having

for it was not at all certain that, having once started, he would keep on coming. Indeed there was no knowing what he would do. She, having married into the family, knew his disposition far better than Madeleine. To marry into a family is far more enlightening than to be born into it. She sighed deeply. She was wretchedly worried and anxious.

Then Madeleine came in, her cheeks flushed and her head held extremely high.

"Is all quite right abovestairs?" her mother asked, turning her head.

"Quite right," she answered, a certain defiant coldness ringing clearly in her tone.

At that moment the whir of a motor.

At that moment the whir of a motor spun in from outside.

"There he is!" exclaimed Lady Wythe starting to her feet and hastening first toward the window and then to the hall,

Madeleine had run quickly toward the remodeled entrance with its graded car-riage sweep. Her heart was bounding with joy over the thought that the tiresome drive was ended and the dear man safely at the door. It must be remembered that she had no more personal experience of Claverhouse than had her mother. Perhaps this fact accounted for a great deal, love rarely depending much on personal experience.

By the time Lady Wythe reached the portico the first amazement as to young Claverhouse's behavior had become a set-tled fact. Lady Wythe, coming out upon the step, stopped as if turned to stone. And small wonder; for quite a striking tableau had formed there.

Madeleine was down by the car and a group of house-servants was gathered close about it. The chauffeur and Conrad were among them. Every one seemed rather un-certain what to do. Her ladyship was at a loss to imagine what had happened, and her heart throbbed quickly as she ran down the steps. Then she learned the explanation, which was, like the explanation of most mysteries, extremely simple: Claverhouse was asleep in the car!

"He must not be disturbed," said the new nurse, a meek, pale little woman, speaking softly over the side. "I will sit here beside him until he wakes. More rugs,

"But wouldn't it be better to awaken him and get him to his room?" said Lady Wythe, also softly. Conrad shook his head. "We shouldn't

dare undertake it, my lady. We never dis-turb him when he is asleep. I can carry up the luggage and unpack, and Mrs. Watson will sit here beside him. If you'll just station some one at the gate to see that no other car comes to make a noise, and tell the servants, please, my lady, not to make any noise indoors either. His hearing is so acute." All this in a whisper. Lady Wythe gave the necessary orders

at once, of course, and the luggage was got out and carried in with infinite precautions.

Madeleine went up to the rooms again to make sure that the fires were all right.

"If I might just suggest, Miss, the sending out of a cup of tes to poor Mrs. Watson," said Conrad, busy unbuckling and unstrapping.

"She'd appreciate the kindness so."

She'd appreciate the kindness so."
"Certainly," was Madeleine's reply. A cup of tea was sent out to the nurse, who did appreciate the kindness, but indicated by signs that still another rug should be provided with which to cover the sleeper. The butler undertook to have somebody fetch one.

"You haven't got anything like a little oil-stove, have you?" Claverhouse's valet asked him next. "To set on the windward side of the motor to hold off the chill, you

The butler thought there was one in the housemaids' room. But it was old, and possibly the wick

"You get it out and we'll have a look at it," said Conrad. "Possibly 1 can fix it." The butler didn't seem altogether pleased

at the prospect of spending the interim be-tween tea and dinner cleaning an oil-stove, but he went away again and had a scullery maid bring the stove into the outer pantry. There the two men took off their coats, and after working for an hour and a half did

finally succeed in persuading the stove to burn gayly beside the car.

"We ought to put two or three screens round it," suggested Claverhouse's devoted

The screens were accordingly brought from all over the house and arranged about

"I suppose you haven't any hangings big enough to cover over the top?" whispered Mrs. Watson.

"Well, we can see," replied the now perspiring manservant, and went to con-sult her ladyship. Together they toured the house, measuring draperies by eye, and in the end the staircase curtains were unhung with a ladder belonging to the gar-den department. These were adjusted over the screens, secluding Claverhouse and his nurse inside.

"But ain't it just wonderful how he sleeps!" observed the butler.

The reflections of the lady of the house

were much the same; but presently altered.
"I hope that no one will come to call this evening," she ejaculated, contemplating the nondescript gypsy tent from the doorway. She was quite sure that no gravel sweep had ever been so graced before. Madeleine, standing beside her mother, made no com-ment. She was thinking how different the arrival had been from anything which she had planned.

They went indoors.
"If I might suggest, no dressing-bell,"

Conrad said later in the servants' hall.
"Of course not," returned the butler.
And then he hurried away to adjust that little matter.

Dressing time came and dinner was served, and still Claverhouse slept on.

# Sing It! DANCE IT!

ERE'S a truly great song! It's rare good luck for a song to become the hit of one big musical comedy. This song is the hit of five, and they are five big ones, viz.: Donald-Brian in "The Marriage Market," "Queen of the Movies," "When Dreams Come True," "The Laughing Husband" and Elsie Janis in London in the "Palace Pages "

Charles Frohman, the theatrical magnate, cables from London: "Fourse Here and I'm Here is now being tang in every munical comedy I have in America.

The nation, from Mains to California, is singing st."

Probably more real money was paid for this song than ever before for any similar composition. For rare sentiment of lyric and charm of melody, it is in a class by itself.

"Every Summer has its song" is an old saying. 1914 has its SONG and DANCE-"YOU'RE HERE AND I'M HERE" is IT this year, ON SALE EVERYWHERE TODAY-30 cents each

# The Thoroughbred

THE SATURDAY EVENING POST

The latest refinement in Sixes—one of the handsomest cars in the world setting many new standards in high-grade cars, and another new record in quality price—the 1915 model of the car whose popularity compelled us in eight months to treble our output.

#### 31 New Features

The HUDSON Six-40 came out last year to win a new field to Sixes. Our famous engineering corps — headed by Howard E. Coffin — had devoted three years to the model. It typed, in their opinion, the ultimate in Sixes, as denoted by modern trends.

In lightness, it set a new standard for cars of this capacity. It cut down old-time averages about 1,000 pounds. All this was saved, with no sacrifice of staunchness, by costlier materials and better engineering.

In economy, it lowered operative cost from 15 to 30 per cent under former like-powered cars. This by lightness, by employing six cylinders and by a new-type motor.

In beauty, design and equipment it excelled, in some respects, any other car of the year.

In price—then \$1,750—it set a new record among cars of comparable quality.

We knew that men wanted this type of car. They wanted lightness, modest size, economy. They rebelled against over-tax. Yet they wanted quality and they wanted beauty. And they wanted, above all, a Six.

But we did not dream how many men waited such a car. They flocked by the thousands to HUDSON dealers, and placed 3,000 orders more than we could fill. At the end of the season men were offering premiums — as high as \$200 — to obtain this light Six-40.

Now our 48 engineers have devoted another whole year to this car. They have brought the weight down to 2,900 pounds. They have added comfort, convenience, silence and beauty in 31 important ways.

In the HUDSON Six-40 for 1915 we offer you the best consensus of present-day ideals. Many men must buy cheaper cars. Some will always want the big and the costly. But most men will concede this new HUDSON Six-40 to be America's representative car.

#### Price \$200 Less

The HUDSON Six-40 demand has compelled us to treble our output for next year. Building three times as many, our cost per car will be lessened by \$200. So the price for 1915 has been fixed at \$1,550.

That accords with HUDSON policy. It is the latest of the thousand things we have done to bring the best within reach of the many.

Think of this ideal car—the very embodiment of all that's desirable—a HUDSON and a Six—selling for \$1,550. Only a little while back there was no Six sold for twice that.

The new HUDSON Six-40 is a thoroughbred Six. Its very lightness denotes the highest grade of materials and a masterpiece in designing. It is distinguished in lines and beauty. Its finish, its beauty and equipment all show our infinite pains. It seats up to seven, with the disappearing tonneau seats.

A year of use in thousands of hands has proved the faultless construction. And now this new model shows all the refinements which 48 men in four years have worked out.

Go to your Hudson dealer and see it. It is the finest example you will find this year of the progress made in motor car building.

> Six-40 Phaeton, \$1,550 f. o. b. Detroit Six-40 Standard Roadster, same price

The HUDSON Six-54, built on the same lines, but with larger motor and 135-inch wheelbase, sells for \$2,350. It offers to men who want size and impressiveness the best that is possible, and at a modest price.

Hudson dealers everywhere now have these new cars on show. Our new catalog on request,

#### HUDSON MOTOR CAR CO. 8034 Jefferson Ave., Detroit, Mich.

#### The fakers

(Continued from Page 21)

against you you will have to spend, at the very least calculation, a hundred thou-sand dollars right off the bat for new equipment, for extension of your lines, and lose a lot of fares because of the universal trans-fers, besides the increased tax you must pay. It seems to me a very modest requirement."
"I can't put you on the board," parleyed

"Oh, yes, you can; or you can have Ros-coe put me on, with the aid of his proxies, at the next annual meeting, and you know it." "Maybe he won't do it." "He will if you ask him."

"And our attorneys —"
"Oh, quit four-flushing round like this!"
exclaimed Chittlings. "I'll take a chance,
if you will give me your word and call
Roscoe in to make it good."

"Come on over and see Roscoe then, and explain it to him."

"Bring him here," insisted Chittlings.
"It's only a step from your offices and it's safer here."

safer here."

"That partner of yours may be coming in."

"No danger. He's off somewhere taking great pleasure in hearing himself rip the hides off you and Roscoe."

Hicks heard Jenkins say a very uncomplimentary and profane thing about himself, and smiled. Jenkins called Roscoe on the telephone and urged him to come over. In a few minutes Roscoe arrived. Chittlings In a few minutes Roscoe arrived. Chittlings was waiting outside for him and ushered him into his office.

"What is it?" asked Roscoe brusquely. "Mr. Chittlings has a plan whereby he says we can make sure to win the election next Tuesday."

"What is it?"

"But," continued Jenkins, "there are a

few conditions. He wants to go on our board and he desires a share of our legal business for himself."

"Let's hear the plan and we'll decide that later."

"Oh, no," said Chittlings. "Decide first

and make a memorandum to that effect, and then listen. You're in a bad way, Mr. Roscoe, and I can pull you out. Of course if I do not, nothing comes of the deal."

"All right," assented Roscoe; "it can be arranged."

"Write a line asking me to call at your offices and saying you desire me to enter offices and saying you desire me to enter your employ as one of your legal representatives; say the question of a retainer can be arranged at our meeting. I shan't call until after election, and if you are beaten I'll never call. The board business can be arranged later."

I'll be beard the accretching of a pen.

Hicks heard the scratching of a pen. "There," said Roscoe, "is that satisfac-

"It is," Chittlings answered after a

pause.
"Well, what's the plan?"
"A simple thing," said Chittlings. "All you've got to do is to have some sort of a you've got to do is to have some sort of a fake accident at your powerhouse on the afternoon of election day and tie up your entire system. The men who do the bulk of the voting in the Fourth, Ninth, Tenth and Sixteenth wards are figuring on voting between six and seven at night. The polls close at seven. Paddy Ross has the machinery and he can see they are closed sharp on the dot. Wreck a dynamo or do some-thing and shut down every car. They won't get on to it for ten or fifteen minutes after they come out to take the cars, and by the time they have walked across not enough of them can vote to carry those wards, for P. Ross will have his votes in early and his election officials in the booths will take good care that the votes of those who do get there are slowly taken. The polls will close at seven, and you can carry those wards and win. Almost childish, isn't it, Jenkins? Wonder you hadn't thought of it yourself; business men you your

but like all business men you do your political thinking by proxy, and I happen to be the proxy in the present instance."

"Good!" exclaimed Roscoe. "We can do that. It will work, too, if nobody knows of it. Why didn't you think of it, Jenkins?"

"Hold on," broke in Jenkins, trying to justify himself. "Hold on a minute. Election day is a holiday. The men won't be in

tion day is a holiday. The men won't be in the factories."

"For heaven's sake, Jenkins!"—Chitt-

lings was brutal in his tone—"do you know any politics at all? This isn't a general election and a holiday by law. This is a municipal election, and no holiday at all, unless individual employees want to make it so, and you can see to it that they do not."

The three went out. Hicks, standing against the ground-glass partition, thought hard. The plan would work. The main strength of the fusionists was in those four wards, and the men couldn't vote until after six o'clock. He knew the employers wouldn't shut down a minute before six o'clock, and the polls closed at seven. Without a street-car service they couldn't get across town in time to vote in numbers enough to carry the wards.

His first impulse was to tell Rollins about the started, stopped with his hand on the doorknob, walked slowly back to his chair and sat down. Chittlings had exacted a price for the plan, a good price, and Hicks had been amazed at the eagerness with which Roscoe and Jenkins had snatched at this stranger. this straw. Evidently they were badly frightened over the outcome of the election. He sat for an hour and considered the sit-

uation. He knew he could make a sensation by exposing the plot, but that would mean nothing to him but a possible election to a place he didn't want, except for advertising purposes, and he had about as much advertising as he could get anyhow. He weighed it all carefully in his mind. He saw the head-lines in the Chronicle, lauding him for exposing this last desperate expedient of the plutocrats, and he saw the headlines in the other papers calling it a roorback and him a fool. Of course, if he exposed the plot the street-car company wouldn't dare to put it through, and that might result in the elec-tion of his ticket; but he had no fancy for serving as an alderman. He wasn't concerned about the franchises for the company. He had been talking to exploit Hicks, and here was a possible chance to get something concrete out of it-some money, perhaps.

There were two courses of action open to him, as he viewed the matter—for the idea of making no use at all of the information he had secured by eavesdropping never oc-curred to him. He could withhold the news of the plot, confiding in nobody but Rollins, until Monday, the day before election, when he could disclose it dramatically and sensationally at his last noonday meeting, and block the plan. Or he could do as Chitt-lings had done, realize on it from Roscoe for lings had done, realize on it from Roscos for his own profit and say nothing. There was glory and a possible election to a minor and laborious place in the first procedure; and there might be money in the second. He liked glory and he liked money. He had no scruples about trying to realize on his in-formation, in a financial way, in case that seemed to be the best thing to do, for, ac-cording to his lights and political upbring-ings, corporations were legitimate prey for cording to his lights and political uppring-ings, corporations were legitimate prey for men in politics and money extorted from them was honest graft. Corporations, he had been taught in Washington, were to be milked whenever possible, as a slight recom-pense to the politicians for the conferring on the corporations, through favorable legislation, of the milking privileges for the people. It seemed to him a smart, a thorpeople. It seemed to him a smart, a thor-oughly political and not a reprehensible thing to do to shake down a corporation whenever possible, especially such a corpo-ration as this street-car company, which was robbing the people every day and desired further legalized opportunities for greater robberies.

He debated with himself whether, in the long run, it would be more profitable to him to use his information to extort money from Roscoe, or some other perquisite of value, or to make an exposure, run the danger of losing his law connection with Chittlings, with the great gain to come in advertising and public acclaim. He knew Rollins would be delighted, and could see in his mind's eye the way that earnest antagonist of the street-car company would display the news of this plot in the Chronicl

Several times he decided to get what he could out of it from Roscoe, and each time his decision was reversed by the thought of the sensation he could make and the headlines in the paper, with himself as the central figure in the exposure and destruction of this startling conspiracy. His fingers itched for money and his vanity clamored for publicity. He worked himself into a fever between his doubt and his desire, and he remained locked in his office until five o'clock wrestling with the problem, without reaching a satisfactory conclusion. Finally he had an inspiration.

window, and then turn unexpectedly to face another burglar, the pal, who has been imide all the time.

Ten shots are better than eight when you are attacked by more than one burglar— when you have to let go several shots out of the window to call the police—when the burglars' hiding place is unknown, and you have to send bullets hiffing and hanging to

THE GOODYEAR TIRE & RUBBER COMPANY, Dept. 224, Akron, Ol-

"By George!" he exclaimed. "I know what I'll do. I'll ask the senator." It was Wednesday afternoon. A letter sent on the night train would get to Wash-ington late on Friday. He could address it to the senator's house, put on a special delivery stamp, and be reasonably sure of re-ceiving the telegraphic reply he would ask for by Saturday morning. That would give him all Saturday for operation on Roscoe. He went to his typewriter and wrote:

REXTOWN, April 15, 1902.

REXTOWN, April 15, 1902.

"My dear Senator: You have always been willing to advise with me heretofore, and I want your counsel again. I am in a dilemma. Briefly, the facts are these:

"It has become known to me that the street-car company, against which we are fighting in the municipal campaign now going on, has a plot in mind that will disfranchise the bulk of the voters in the four wards where the most of our strength is. This plan was of sufficient value to the corporation to induce it to pay handsomely poration to induce it to pay handsomely

for it.
"Aside from the three principals, I am
"Revtown who knows of the only person in Rextown who knows of this plot. Now, my dilemma is this: Shall I use this information to destroy the plot, and thereby help our side win and get a lot of publicity for myself out of it; or shall use it for the purpose of getting money

"The street-car magnates are in desperate straits. We have them whipped. They probably can win if they put this thing through, and that makes it certain they will pay me to withhold my knowledge of their plan, for if they lose they must immediately

spend large amounts of money for improve-ments, extensions, and so forth.

"I know enough of what goes on in Wash-ington to know that corporations are conington to know that corporations are considered legitimate subjects of attack in this manner, and that they usually pay for protection and political aid. I can aid this corporation by withholding my information, or I can hurt it in a most vulnerable spot, its treasury, by telling what I know. Which would be best for me? I am sure I can get a good-sized sum for my information.

information.
"Please consider this sacredly confiden-"Please consider this sacredly confidential and advise me by telegram. In order that there may be no leak here, I suggest you send me a telegram reading like this: 'Your brother has arrived,' and sign it 'Charles Smith,' if you advise me to expose the plot, or a telegram reading: 'Your money will be held subject to your directions,' and sign it 'William Jones,' if you think I should negotiate with the corporation. I merely suggest these ciphers. Any tion. I merely suggest these ciphers. Any telegram with the word 'brother' in it will mean to me that I am to proceed with the exposure; and any telegram with the word 'money' in it will mean that I shall negoti-

"With kind regards and best wishes,
"Faithfully,
"T. MARMADUKE HICKS."

Hicks mailed his letter, taking it to the station himself to make sure it went on the eastbound train. A telegram was waiting for him when he reached his office on Sat-urday morning. He tore it open and read:

"Washington, April 17, 1902.

"T. MARMADUKE HICKS,
"Care Chittlings & Hicks,
"Rextown.
"Your brother's money.
"Charles William Smith-Jones."

HICKS stared at the telegram in dismay.
He read it again: "Your brother's

What did it mean? Was the telegram a joke? If it was it was a cruel one, for it left him in a most uncomfortable position with no plan formed.
"Your brother's money!"

Hicks sat at his deak and racked his brain. Suddenly he jumped to his feet and shouted:

"I know! I know! He means to both—get the money and make the expo-sure. That must be it." Hicks repreached himself for not think-

ing of this himself, and for going to the senator with a problem which, now that it was solved for him, seemed so simple of solution. He instantly determined to get in touch with Roscoe, see what could be done with him, and later to seek Rollins

> envelope on his desk, adn the heavy handwriting

of Chittlings. He tore it open and read, scrawled on a slip of paper:

"Dear Hicks: I'm going out to Grands-burg to spend Sunday. I'll be back on Monday afternoon, in sufficient time to vote against you on Tuesday. Yrs., J. K. C."

against you on Tuesday. Yrs., J. K. C."

As Hicks sat with the note in his hand he had an idea. "Why certainly," he said.
"That's the way to do it. Use Chittlings."
He locked the outside door and called up the offices of the street-car company.
"Hello," he said, talking as much like Chittlings as he could. "This is Mr. Chittlings, the attorney, to talk to Mr. Roscoe."

There was a pause.
"Hello, Mr. Roscoe, this is Chittlings—J. K. Chittlings . . . I'm very well, thank you . . . . Oh, yes, I am sure it will work . . . Excellent plan, don't you think, can be executed easily too . . . My business with you . . . I think it would be well if you came to seemy partner, Mr. Hicks. Don't say I mentioned the matter to you. He'll be at the office about nine-thirty . . . Oh, no, I am not coccerned. From some things I heard I fancy it would be to your advantage to talk to it would be to your advantage to talk to him. . . Nine-thirty . . . Yes . . . That's right."

Hicks thought over what he would say. At half-past nine the outside door opened and leading agree in.

At half-past nine the outside door opened and Jenkins came in.

"Who do you wish to see?" asked Hicks.

"Mr. Hicks."

"I am Mr. Hicks. And you?"

"I am Mr. Jenkins, general manager of the street-car company."

"And what is your business with me?"

"I understand you desire to see me."

"For what purpose?"

"I don't know. Mr. Roscoe said you wanted to see me. He said he was in touch with a person this morning who intimated you would talk with Mr. Roscoe."

"If that is so, why didn't Mr. Roscoe come himself, provided he wants to see me, although I cannot imagine what business

come himself, provided he wants to see me, although I cannot imagine what business he can have with me?"

"He thought I \_\_\_\_,"

"But, Mr. Jenkins, I have no possible business with you, nor am I in the habit of talking to intermediaries. If Mr. Roscot talking to intermediaries. If Mr. Roscot talking to intermediaries.

wants to see me I should suggest that Mr. Roscoe appear in person. Good morning."

Jenkins stared at the perfectly possessed Hicks, whistled and went out. Half an hour later the door opened again and Roscoe

hour later the door opened again and Roscoe came in.

"Mr. Hicks?" he asked in a muchstrained voice.

"I am Mr. Hicks, sir."

"And I am Mr. Roscoe."

"I recognized you instantly. And what can I do for you, Mr. Roscoe?"

Hicks waved Roscoe to a chair with a polite gesture. Roscoe sat down, clutching his derby hat in both hands. He was red in the face and breathing hard.

"It was intimated to me, Mr. Hicks, that

the face and breathing hard.

"It was intimated to me, Mr. Hicks, that you desire to see me."

"For what purpose, Mr. Roscoe?"

"I haven't the slightest idea."

"Nor have I."

"But"—Roscoe was much perplexed—
"I was told to call on you, and I am here."

"I am sure I am very glad to see you, Mr. Roscoe," said Hicks suavely; "but unless this is a social call I know of no other reson why you should be here."

"A social call!" shorted Roscoe. "I like your nerve, young man! The idea of me calling on you socially. Good-day."

He rose and jammed his hat on his head. As he was passing out of the room Hicks

As he was passing out of the room Hicks called: "Oh, by the way, Mr. Roscoe, now that your visit has refreshed my memory, there is a matter I might discuss with you." Roscoe turned. "What is it?" he asked

sharply.

"It relates to that plan you have for a fake accident in your powerhouse on the afternoon of election day, and the consequent crippling of your system just before the polls close."

Roscoe's jaw dropped. He stared at Hicks. His face went from red to purple and then faded slowly back to red again.

He stammered, stuttered, gasped.
"You scoundrel!" he shouted. "Do you mean that you and your blackmailing part-

mean that you and your blackmaning par-ner are trying to collect twice on that? Well, take it from me, you can't! I'll have you arrested first!"

"I do not know to whom you refer as my blackmailing partner, Mr. Roscoe," said Hicks steadily, his eyes narrowing as he con-centrated them on the street-car magnate. Roscoe floured down in a chair.

Roscoe flopped down in a chair. "What do you want?" he asked.

"Nothing, my dear sir, nothing. I merely siggested we might discuss this matter. Of course, you know, now that I am in full possession of the facts in the case, it is my duty to expose them, which I shall do at my noonday meeting to-day, and you will not be able to carry out your nefarious scheme.

"Do you intend to do that?" asked Roscoe, who was clearly badly frightened.
"It is my duty," declaimed Hicks.

"Doesn't it appeal to you in that light?"
"What will you take to keep quiet?"

"What will you take to keep quiet?"
Roscoe's voice was husky. His tongue was
dry. He gulped and choked over the
words. He knew he was trapped.
"What will I take?" exclaimed Hicks.
"Why, my dear sir, I have no idea of keeping quiet! What will I take? Do you mean
you are trying to bribe me to keep this nefarious plot a secret and allow you to defeat
the will of the people? I am surprised at
you, Mr. Roscoe!"

"What will you take to keep quiet?"
dermanded Roscoe again.

dernanded Roscoe again.
"Why, really, Mr. Roscoe," continued
Hicks, "the matter hadn't appealed to me in that light. I am at a loss to understand you. Do you mean what compensation would I exact to remain silent about this whole affair?"

"Exactly that," Roscoe replied.

Hicks paced back and forth across the

"I hadn't considered that," he said, half to himself. "Of course I could not think of doing such a thing; but if I were so in-clined, what would it be worth to you, Mr.

Roscoe?"
"I will give you a thousand dollars to say

nothing."
"A thousand dollars!" laughed Hicks.
"Why really, Mr. Roscoe, for a man of large affairs you have very primitive ideas

about money."
"How much then?" asked Roscoe, glar-

ing at the laughing Hicks.
"Well, Mr. Roscoe, if I were to put a valuation on this matter, which of course I shall not do-inasmuch as I have no idea of not exposing you-except for the purpose

of not exposing you—except for the purpose of prolonging a most agreeable conversation, I should say that five thousand dollars would be barely adequate."

"Five thousand dollars!" screamed Roscoe. "Why, that is preposterous!"

"Oh, fie, fie, Mr. Roscoe, you are excited. Remember I am offering you nothing."

"Well," said Roscoe, "I'll give you five thousand dollars. I'll mail you a check."

"My dear Mr. Roscoe you will do nothing of the kind. I could not use a check."

"How do you want it then?" persisted Roscoe.

Roscoe.

"I have often noted the peculiar shade of yellow on the backs of one-hundred-dollar bills," said Hicks as if no one were present and he were talking aloud for his own amusement. "It certainly symbolizes the gold for which they are legal tender. I don't suppose a package of fifty of those bills would be bulky, would it, Mr. Roscoe?"

He turned to Roscoe, who sat and glared

indignantly at him.
"I haven't got fifty hundred-dollar bills
on me and you know it," growled Roscoe.
"Why should you have? I see no reason why a man, even of such great affairs as yours, should carry so much money with him. However, I understand the banks have them in large supply. Not going, are you? Well, I shall be glad to see you at any time. I shall be here until a quarter to twelve, when I have an address to make. It would be quite sensational, wouldn't it, Mr. Roscoe, if I happened to mention this matter of the proposed fake accident at the powerhouse in that address? I am assured of

a large audience and the reporters generally drop round." Roscoe's face grew purple again. He

rushed out. Half an hour later Roscoe came back. He took a bundle of bills from his inside

coat pocket.
"Here's your money," he said, holding out the bills.

Hicks gazed steadily out of the window.
What money?" he asked.

"Your five thousand dollars."
"Not mine, yours," insisted Hicks.
"How very kind of you to bring me these samples for my admiration! Fifty, did you say? Would you mind counting them one by one? It doesn't seem possible there are fifty there."

Roscoe, trembling with rage, counted the

bills one by one.

"Ah," said Hicks, after he had finished;

"there are fifty, are there not? Ours is a most compact currency."

"Gr-r-r!" choked Roscoe, standing with the little package of bills in his hand. "I suppose you will give me what passes for your word that you will not mention this matter?"

"I have promised nothing, Mr. Roscoe." "Do you mean you sent me out to get this money and that you are going to give no return for it. What is this—just a plain hold-up?"

Roscoe by this time was almost beside himself. "Here is your rotten money," he shouted. "You and your gang have got me crazy. If you break faith with me I'll punish you if it takes a lifetime."

He threw the money on the desk and hurried out.

"Mr. Roscoe! Mr. Roscoe!" shouted Hicks. "You left something here."

Hicks gathered up the money, counted it, caressed it, felt the texture of the bills, admired the engraving and the color. It was more money than he had ever seen at one time in his life, and it was his, if he wanted to keep it. He thought he would keep it, and was preparing to hide it somewhere until a favorable time came to deposit it in a bank, when his eye caught the telegram from the senator.
"Your brother's money."

Hicks recalled men who had taken money to entrap bribers, and the notoriety they had attained by exposing the bribe-givers.

He felt sure the senator meant to do that.
"This game is only half over," he said to himself, and he telephoned to Rollins to come to his office after the noonday meeting that day, which Rollins promised to do. Hicks went across to the store where the noonday meetings were held and excori-ated Roscoe and the other street-car mag-

nates; but he said nothing about the plot. "What is it?" asked Rollins as he came into Hicks' office about one o'clock.

into Hicks' office about one o'clock.

"Roscoe was here this morning."

"Roscoe!" repeated Rollins in amazement. "What did that pirate want of you?"

"He tried to bribe me."

"What for?" asked the incredulous Rollins. "Why should he try to bribe you?"

"Because I know something he wants no one else to know. He left these," and Hicks took the hundred-dollar bills out of his pecket and spread them on the desk.

his pocket and spread them on the desk.

"How much?" asked Rollins, looking at
Hicks and then at the money. "How
much? What for? Did you take it?"

"Hold on," interrupted Hicks. "Don't
get excited. Of course I took it, for here it
is but I didn't take it to keep. I took it.

get excited. Of course I took it, for here it is; but I didn't take it to keep. I took it to show at the meeting on Monday, when I will expose the whole affair."

"I don't understand," said Rollins.

"What is it? What does he want? Why have you all this money if you don't intend to keep it? What is it all about?"

"Now keep quiet and listen," urged Hicks, "and I'll explain it all. I found out a plot they have to stop the cars—"

a plot they have to stop the cars ——"

"Stop the cars!" broke in the excited Rollins. "When? Why? What for?"

"Wait a minute, please. I found out about a plot they have to stop the cars about closing time in the factories on Tuesday afternoon and thus make it impossible. day afternoon, and thus make it impossible for the majority of the mill men to get home in time to vote. Roscoe learned I knew of this and came here and offered me this money to say nothing about it."

"How are they going to stop the cars?"
"By a fake accident at the powerhouse "By a fake accident at the powerhouse that will put them out of commission just before six o'clock. The polls will close at seven sharp. The men won't know about this and will hang round waiting for cars for ten or fifteen minutes. Then they will walk across town, but most of them won't get to their polling places in the four outlying wards until after it is too late to vote."

Rollins whistled. "Well," he said, "what shall we do about it?"

"Expose them," said Hicks. "Put a big advertisement in the Chronicle for Monday morning urging all the people in Rextown

morning urging all the people in Rextown to come and hear my noonday address. Get up an extra edition of the Chronicle for circulation on Monday afternoon. Play it up all over the paper on Tuesday morning, and they won't dare pull off any accident. Besides, we can frighten the factory owners into shutting down for half a day if we go at it right."
"Fine!" shouted Rollins. "Fine! It'll

beat them. But what shall we do with this money?"
"I'll take care of that," replied Hicks.

"I'll use it as proof in my speech, and then we can decide what use to make of it afterward."

Look out! There's a motorcop, his eye is on you. Watch your speedometer—it will keep you within the speed limit set by law. Your Stewart Speedometer will save you from arrest, humiliation and a fine probably greater than

Out to the country roads. Now what is your Ford really doing? Open her up. Soon your Stewart Speedometer shows 25 miles— 30 miles—35 miles—40 miles—more if you want Again your Stewart Speedometer is right on the dot, telling you exactly how fast you are going,—not guess work, but exact proof of what your Ford can do.

Gasoline, -- how many miles per gallon are you getting out of your Ford? Oil, too? What a satisfaction to know, definitely, how cheaply you can run your Ford. Your Stewart Speedometer tells you exactly.

Bang! There goes a tire! What's this? Your Stewart Speedometer mileage record shows you that that tire has run only 3,000 miles. Perhaps it is guaranteed for 5,000 miles. Off to the tire dealer you go. Is he skeptical? Is he disagreeable? Not at all! He takes one look at your Stewart Speedometer's mileage record which he never questions. He sees exactly how many miles that tire has run,—how far it has fallen short of the guarantee. You have got the proof and he's glad to accept it. And you get an allowance on the new tire equal to 2,000 miles.

Again you hit the country road. 33 miles-34 miles-that is all that you seem to be able to get with everything wide open. Something is the matter somewhere. You cannot get the speed you know your Ford has been giving. Needs fixing. Your Stewart Speedometer has told you.

Off for a tour. New country—new roads— you must depend upon a guide book. And to follow a guide book's directions you must have a Stewart Speedometer to show the miles and fractions you travel.

Watch your Stewart Speeds never be arrested for speeding

Your Stewart Speedometer will always get ye

#### PINCH HITTING FOR CUPID

(Continued from Page 14)

"Oh, I'm all right, I guess," says he, rather ort. "See you later."

"Don't forget the number," says Mary.
"I want to hear all about the ranch." She watched him as he crossed the lobby to the

elevator.

"Chief, is it true what they're saying about him?" she asked me.

That depends on what they're saying." "Billy Mason told me he'd be surprised if Joe finished the season. Of course last

if Joe finished the season. Of course last year was his bad year, but I was hoping he'd get going again. I see he's not hitting."

"Well, Mary," I says, "he may last the season and he may not. You know how it is with ball players. They don't last forever. Next to me, Joe's the oldest man on the pay roll."

"Humph!" says Mary. "Do you call him old? Better look out, Chief! Joe and me are the same age."

"He's old for a second baseman." I saw

"He's old for a second baseman." I saw I should have to hedge that bet. "This is his twelfth season and naturally he's slowing up. There's three or four years of base-hall in him yet, but not of the big-league variety. He told me last fall I'd better look out for another man."

Right in the middle of our talk the other man came along. Tom bought a box of cigarettes and I had to introduce him to Mary. She knew he was warming the bench, waiting for Joe's job, and that was probably the reason why she was rather cool with him. That's a bad way to get rid of a fellow who is loaded to the ears with pride and good opinions of himself. Tom can't get over the notion that strange women ought to like him on sight, and when I went away he had both elbows on the showcase and was settling down to convince Mary that he was quite a fellow. He put in the whole evening at it. Joe passed through the lobby twice, but he didn't stop.

The next day, in the dressing room at the

The next day, in the dressing room at the park, Tom brought about the first open clash with Joe. It might have been accident, but it had all the earmarks of design, "People," says he, "that girl at the cigar counter in the hotel is all right. If she's got a night off this week I'm going to take her to the theater. I'll bet she'd go if I asked her."

Joe was over in a corner lacing up an ankle bandage. He walked over and stood in front of Roche. Some men get noisy when they're in earnest. Joe spoke just

above a whisper.

"That'll do you!" says he, "Let your voice fall right there."

"What do you mean—let my voice fall?" asks Tom. "I didn't say anything wrong about the girl, did I?"

about the girl, did I?"

"There was nothing wrong with what you said and you may be thankful for that. You picked the wrong place to say it—that's all."

"It seems to me you're mighty particular," says Tom with a sneer.

"I am," says Joe.

They looked at each other for a few seconds. Joe's right hand hung at his hip, cocked and primed, ready if Tom made a move: and a nasty right hand it was too. move; and a nasty right hand it was too. Tom saw it hanging there and cast his vote

for peace. He sat down.

"Oh, well, if that's the way you feel about it ——" says be. about it says he.

After Joe had gone out on the field Tom

began to ask questions.

"Bancroft ain't no Chevalier Bayard that I can see," says he. "What license has be got to hop all over me like that?"

"Well," says Nat Beers, the catcher, 'Joe thinks pretty well of that lady himself." "Oh, he does, does he? And what does he lady think?"
"Maybe you'd better ask her," says Beers,
"I guess I will," says Tom.
By accident Roche had found a way to

edevil Joe, and he went to it with all the oor judgment of a kid and all the spite of a rown man. He hung round that cigar ounter every minute he was in the hotel; nd of course Joe wouldn't come near while

e was there. I'll bet Tom didn't enjoy it ny more than Mary did, but he was out to ake Joe sore and he succeeded. Joe spent ne rest of his evenings in his room and idn't get a chance for a quiet talk with

Iary on that trip.

We finished up at St. Louis and started ast; and somewhere on the road Joe lost the fighting snap and the pepper that had een holding him in the line-up. When a an gets so that he doesn't kick on a called ird strike he's in a bad way. Joe began

to play ball as though he didn't care; and the home papers started to roast him and demand a new second baseman. Two or three sporting writers can put their heads together and drive any baseball player in the country out of business if they hammer at him long enough; and the newspaper knocking was just an additional push down the toboggan for Joe. The fans chimed in, too, and it got so that the anvil chorus struck up the minute Joe showed his head.

Even at this time Joe's absolute fairness

Even at this time Joe's absolute fairness did not desert him.

"It's no use, Chief," says he. "I'm gone!"
There was only one thing I could do. I benched Joe and put Roche at second; and Tom, seeing that his chance had come at last, played like a wild man. A week or ten days afterward Joe came to me again.

"It's up to you to do something," says he.

"What do you want me to do, Joe?"

"Ask for waivers. Find out whether any

"Ask for waivers. Find out whether any of these other teams want me. Even if I was in shape to play, I couldn't stay here, with the papers knocking and the fans after me. I might finish the season with some other club, but I'm not going to finish it on the bench. I don't want to draw a salary that I can't earn."

I tried to talk him out of it, but it wasn't any use. Joe was in earnest and in the end I asked for waivers. None of the other managers wanted him; I hardly thought they would. This was the situation when we started West the second time and on the

train I had a long talk with Joe.

"They've all waived," says I. "I can trade or sell you to Toledo or Milwaukee. You'd get pretty good money in the American Association for a couple of years. What

do you say?"
"It's all the same to me," says Joe.
"Well, you might be thinking it over
and let me know. If you've got a preference for either of those towns

"It don't make any difference," says Joe.
Of course I could have gone ahead and
made any arrangements that suited me.
The baseball law is all on the manager's side and when a man is worn out you can sell him, trade him for a bat-bag, or give him away; but when a player has given me the best that's in him I believe that he is entitled to some consideration.

I HAD hoped that Tom Roche would for-get his foolishness; but the first thing he did when we got to Chicago was to ask when Mary would come on duty. He gave the cigar counter a strong play—and Joe, the chump, let him do it. After the opening game Tom anchored himself, with one elbow on the charging game area and Loe and down on the chewing-gum case, and Joe sat down across the lobby with a magazine in his

It was a three-handed game of freeze out, Mary playing against Tom and Tom play-ing against Joe. Joe lost. Tom stuck till eleven o'clock, when Mary shut down for the night, and then he escorted her as far as the street door.

Several times that evening I noticed that Mary glanced over at Joe as though she wanted to catch his eye. That started me to thinking. If Joe was ever going to have his heart-to-heart talk with Mary now was the time. I didn't know how things stood with them; but it seemed to me that after the shoe drummer had hit for Cupid, and I'd gone in to run for him, a score was in

danger of being left on the bases.

The next day I asked Mary whether she couldn't get off at eight o'clock and go to the theater. She said there wasn't a chance; it was her long day, from noon till eleven.
"That's too bad," says I. "I wanted to

give a party for you and me and Joe."
"Maybe I can fix it," says Mary. "Yes; can pay a woman to work in my place. Then I went after Joe. I found him in his room, getting ready to shave. His face

was all covered with lather.

"Anything doing tonight?" I says.

Joe shook his head.

"All right. You're going to a theater party."
"Not on your life!" Joe didn't like

theaters.

"But it's my party," I says. "I'm giving it. It is going to be very select. Mary will

be there."

"And who else?" Joe shot that one at "And who else?" Joe shot that one at himself. me quick, without waiting to set himself.
"Who else?"
"Why, just you—and me."

# 80,000 Women Released From Washboard Slavery

In eighty thousand homes this week the family washing is being done with-out the drudgery of washboard rubbing and wringing by hand. The Electric Washer has eliminated both of these back-breaking tasks. Three Cents Worth of Electricity does the washing and wringing. With a turn of the switch the cylinder revolves, washing clothes clean and white. In ninety minutes an entire family washing is finished.

# The Improved Thor Electric Washer Silent, Chainless

A decided advance over any previous model. Shaft driven with a spiral bevel, not a worm, gear—absolutely noiseless; all machinery enclosed, protecting hands and clothes. Wringer guard makes accidents impossible.

THE SATURDAY EVENING POST, PHILADELPHIA, PENNA.

Joe didn't say a word for a minute. Then he took a towel and wiped the lather off his

"I guess I won't shave till after the game,"

Because I've never done any courting myself it's no cinch that I'm entirely ignorant of the game or the playing rules. There's many a man sitting out on the bleachers who knows as much baseball as I do. I went and hunted up a good, noisy musical comedy and I bought an upper box. Get that? I bought it—gave up twenty great big iron dollars for it!

Mary looked as sweet as a peach that night. Up to now I've sidestepped saying anything about her hair or her eyes; but to make the women readers feel easier I'll go so far as to state that Mary wasn't at all hard to look at, and this night she'd fixed herself up extra special. It pretty near took loo's breath away when he saw her.

herself up extra special. It pretty near took
Joe's breath away when he saw her.
I'm no pilcer and when I start anything
I do it right. We went to the show shop in
a taxi. Joe didn't have much to say; he
was busy looking at Mary. At the door I
pulled out the whole bunch of tickets and
handed three to the man. Carrying out the
general idea I took one of the front seats,
right over the footlights.
"Mary," says I, "you and Joe better sit
back there a little, so you won't get the glare
in your eyes."
"There's oceans of room, you extrava-

"There's oceans of room, you extrava-gant man!" says Mary. "Don't you want to sit back here too?"
"Not me!" says I. "I'd rather see the tops of their heads than their faces."
Did you ever sit up under the roof of a the

ater, with the bull fiddle snorting, the slide trombone sliding, the drums batting .550, a flock of females in tights squalling on the stage, and try to hear what two people were saying behind you? It can't be done. I got an earful here and there in the quiet spots—I figured that I had a right to listen—and from the snatches of the conversation I gathered that Joe was breaking the news that be wasn't long for the big league. As if Mary didn't know that!

In the second act there was a place where a bottle-blond lady came out with a rose in her hand and began to coo to it. Most of

in her hand and began to coo to it. Most of the lights went down, and that was where I got the worth of my twenty bucks. "It makes a difference—being a minor lenguer," Joe was saying. "I had a lot of plans, but I guess they're up the flume now. It's Milwaukee ar Toledo for me, Mary." "Why," says Mary, "Milwaukee is one of the nicest towns in the country! I was there once and I've always been crazy to go

there once and I've always been crazy to go

"For a visit, maybe," says Joe; "but you wouldn't be satisfied to live there for a

couple of years."
"I'd love it!" says Mary. "Sometimes
I think I can't stand Chicago another

minute."

Well, there was one for him, square on the glove-hand side and waist high; but

umbled it "Honest, Mary? Why, if I thought

And there he dropped the ball. I believe he had the right idea, but he lacked the nerve. Just then—confound it!—the bull fiddle and the slide trombone and the drums and everything else busted loose all at once, and I lost track of the conversation completely; so I'll never know and you'll never know whether Joe made the play himself or whether Mary should be given an

assist on it.
One thing is certain—the play was made.
I saw that much when I went for my hat after the curtain came down. Joe and Mary were sitting together in the back of the box; and by the look on their faces they didn't know the show was over or that there was

anybody else within a thousand miles of 'em- and didn't care, either, "Chief," says Joe as we stepped out into the little hallway, "you can make it

Milwaukee—and the snoner the better."
"Yes," says Mury: "we're going to Milwaukee. And oh, Chief, you're a darling!"
There's no use in denying it. She put her arms round my neck and kissed me. I suppose a bonehead would have pretended to be surprised and asked a lot of questions. I kissed her back and let it go

at that.
"Fair enough," I says. "Now we will go out and see what we can scare up in the way

of an engagement supper."

Probably Joe, if he thinks about it at all, gives Cupid a lot of credit. Mary is wiser than that, for she named the first boy after me.

O much is expected of a Firestone Tire that nothing is left undone to make every tire worthy of our name and reputation.

There is always room at the top, but the

position demands watchfulness.

That is why the makers of Firestone Tires are sleepless in maintaining that quality which means a full measure of comfort, security and economy.

Firestone Comfort can result only from the extra quantity and superior quality of rubber in Firestone Tires.

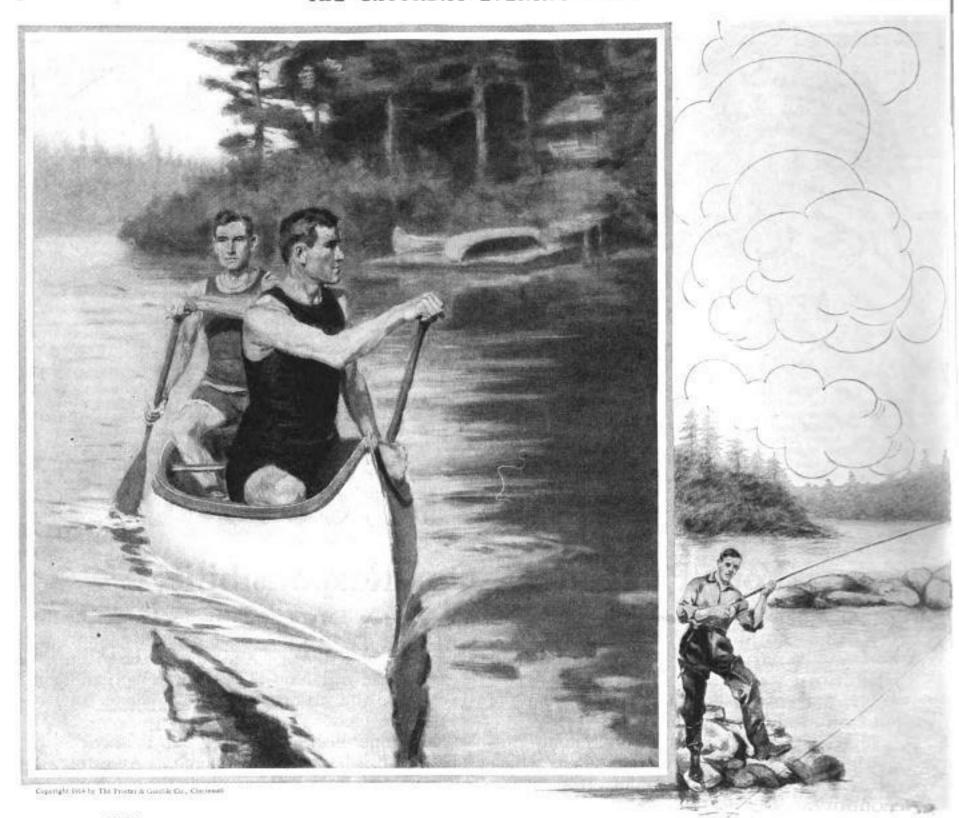

Firestone Security springs from a design which is scientifically exact to hold against pressures and strains. Add to this the giant grip of the real Non-Skid tread design, and you have the reasons for the confidence of Firestone users.

Firestone Economy proves out in service because it is built in at the factory. An extra amount of finest rubber and fabric, given surpassing toughness by Firestone methods the better workmanship—the more rigid inspection—these are the things that assure Firestone users—Most Miles per Dollar.

Leading Dealers Everywhere Have All Sizes and All Types in Non-Skid and Smooth-Tread Firestone Tire and Rubber Co., Akron, Ohio-All Large Cities

"America's Largest Exclusive Tire and Rim Makers" Pneumatic Tires, Truck Tires, Pleasure Electric Tires, Carriage Tires, Cycle Tires, Fire Apparatus Tires, Rims, Tire Accessories, etc.

# NON-SKID TIRES

HE beauty about Ivory Soap is that you can use it satisfactorily under all conditions.

When the skin is irritated by sun or perspiration Ivory Soap gives a pleasant bath because it is as mild as soap can be made.

When your bathing is done in lake or stream you cannot find a handier soap because Ivory Soap floats.

When there is general cleaning to be done—dishwashing, laundry work, etc.—it is unnecessary to provide a laundry soap, for Ivory Soap not only is a mild, safe cleanser, but a thorough one.

For any purpose, in any place, at any time, Ivory Soap can be used to entire satisfaction, because it is pure, high grade and—floats.

MYNNY SOAP

.... IT FLOATS

By the old way, these 10 operations were necessary:

- Strop razor.
  Work up lather in cup.
  Apply lather to face.
  Rub in with fingers.
  Shave one side of face.
  Strop razor again.
- 7 Renew dried-up lather on un-shaved side of face. 8 Shave unshaved side of face. 9 Wash off lather. 10 Apply lotion to prevent soreness and allay burning.

By the Mennen way, only these 5 operations are necessary:

- Strop razor. Apply Mennen's Shaving Cream. Lather with brush. Shave entire face (re-stropping and
- re-lathering unnecessary, as lather does not dry). 5 Wash off lather ino lotion or other soothing application necessary).

# Compare the Old Way of Shaving with the Mennen Way

Use Mennen's Shaving Cream and it will take you but half as long to shave. You will be rid of all the sore, smarting after-effects, for Mennen's contains no free caustic to bite and burn your skin.

You will find it is the lather - not the razor that has made shaving a torture. The full creamy lather of Mennen's Shaving Cream needs no "rubbing in" with the fingers. It instantly softens the stiffest beard and leaves the face smooth, soft, cool and comfortable.

A user of Mennen's who says he is afflicted with an exceedingly tender face and a heavy, wiry beard, writes: "The first time I used Mennen's I attributed the good feeling to the condition of my razor - the second time I attributed the happy after-effect to the good condition of my face. The third day my scepticism blossomed into hope; but, to make sure, I used another preparation on the fourth day, and - Mennen's had a convert. Mennen's is economical in every sense; it economizes time; it saves temper; it protects the skin against razor irritation; it contains no alkali to eat into your pores; it leaves your face refreshed, your temper equable."

Another says: "A little strip of the cream applied to the face-a few strokes with a wet brush to distribute the lather-and one's face is ready for shaving. It isn't necessary to work up a lather with the bristles as was the case when using soap and powder, and best of all, the lather generated with your cream lasts. I

may frankly say that I have never used a lathering medium that produced as fluffy, creamy lather, which softens the beard, does not dry on the face, and leaves the skin as cool and fresh as does Mennen's Shaving Cream."

Mennen's Shaving Cream is put up in sanitary, airtight tubes with handy, hexagon screw tops. No amount of advertising can make you realize what a difference there is between it and other shaving preparations. You must try it-then you will know.

At all dealers—25c. Send 10c for a demonstrator tube containing enough for 50 shaves. Gerhard Mennen Co., Newark, N. J. Makers of the celebrated Mennen's Borated and Violet Takum Toilet Powders and Mennen's Cream Dentifrice.

# The Cost of Tires

No-Rim-Cut Prices—Since 1909—Have Been Cut in Two. Last Year Alone They Dropped 28 Per Cent. Now These Tires—Once the Extra-Priced—Undersell 16 Other Makes

#### A curious thing has happened.

Once we had to explain why No-Rim-Cut tires cost more than other makes. Now men are asking why they cost them less. Did we over-charge you formerly, or do we undercharge you now?

#### Why They Cost More

They cost you more than others once, because they cost us more. And they cost us more today.

No-Rim-Cuts are the only tires which embody our costly, efficient way to put an end to rimcutting.

They are the only tires which get an "On-Air" cure. That is, we final-cure on air-filled tubes, under actual road conditions. We save in this way all the countless blow-outs due to wrinkled fabric. This one extra process—used by us alone—costs us \$450,000 per year.

They are the only tires in which hundreds of large rubber rivets are formed to combat tread separation.

They are the only tires which have our

double-thick All-Weather tread. The anti-skid as smooth-riding as a plain tread, but with deep, resistless, sharp-edged grips.

#### Why They Cost Less

Of course, raw rubber has come down; but not more for us than for others.

Our overhead, since the days of small output, has dropped 24 per cent.

Our labor cost, through multiplied production, has dropped 25 per cent.

Our selling cost has dropped.

And our profits were pared until last year they averaged 61/2 per cent.

We have new buildings—new equipment new efficiency methods. We often make in one day as many motor tires as we made in a month five years ago. Not another plant in the world has such an output.

#### Tire Users Did It

Our present prices are largely due to the men

who get them. They have bought these tires by the millions. And this year they are buying 55 per cent more than they ever bought before. We have used our multiplied sales to save all that we could for you. And we have given you more than we saved.

# Extra Quality Can Anybody Give It?

Of course, the claim for extra price is extra quality. That's too indefinite to argue. We spend \$100,000 yearly to find ways to better tires. That others excel us is simply unthinkable. More men have adopted Goodyears than any other tire in the world. It can't be supposed that so many men are mistaken.

We've told you four ways where Goodyear tires excel. They deal with the four greatest factors in upkeep. No man can think that we give those things and then skimp quality.

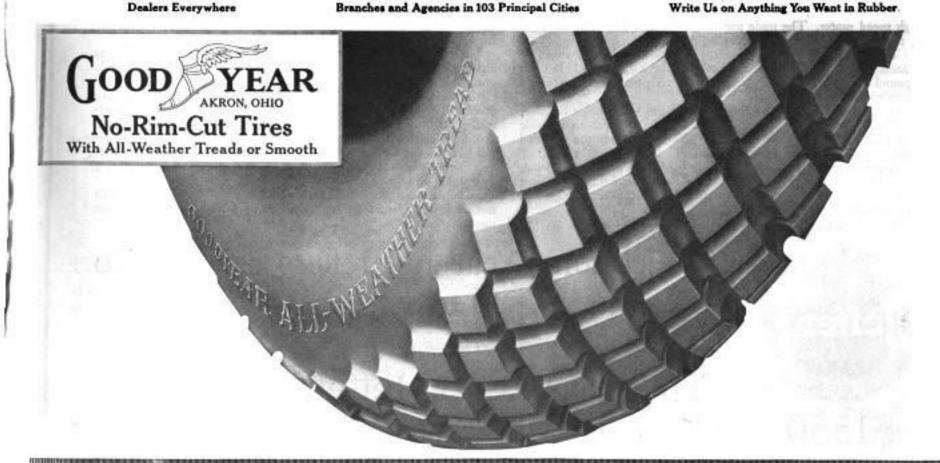

The truth is, Goodyear prices buy the utmost in a tire. Why pay for three tires what we charge for four? Any dealer will supply you Goodyears if you say that you prefer them.

# The Jeffery Car is the Car You'd Build

If you had all the money you needed. If you had a big motor car plant—and you knew how. If you had the knowledge and experience of all the best engineers in the world, and you built a motor car, what would it be like?

First, it would be driven by a light, high speed, high efficiency motor. The bulky, slow speed motor is a thing of the past. Europe has proven that economy and highest efficiency are secured through the light, high speed motor. The trade papers are full of editorials and articles by the best known engineers endorsing the idea.

Then you would build your springs, axles and drive shafts of vanadium steel. All the highest priced cars use it. It costs 17½ cents a pound as against 8 cents for the ordinary steel; but you are building a

car to go at least 50,000 miles.

Imported annular ball bearings would claim your choice because, like Swiss watches and scientific instruments, they bear an enviable reputation for fineness and efficiency. You would buy the best and therefore the highest priced starting and lighting system.

A four speed transmission would be used, Bosch duplex ignition, the best type of some highest grade carburetor like the Rayfield, Spicer universals, full floating rear axles, Daimler leather couplings and Warner speedometer.

Then your equipment would be the best you could buy.

Now we say that you would incorporate these units in the car you built because the best engineers and the most experienced and successful builders are incorporating some or all of them in the highest priced cars on the market. It is no mere coincidence that the Jeffery is built from these high grade materials.

Jeffery brought the light, high speed, high efficiency motor idea, as an accepted and proven principle, from Europe last Fall. That made

possible a wonderfully economical car.

Then he spent a million dollars for quality alone which he might have saved had he been satisfied to build an ordinary car, in putting that superquality into the car which we have said you would put into the car you built.

So Jeffery has built for you the very car that you would build yourself had you the facilities. In finish and style it delights the eye.

The man who buys a Jeffery now will have the satisfaction of being thoroughly up to date next season.

The early announcements of many of the big manufacturers show that the light, high speed, economical type of motor will be the dominant one next season.

\$1550

# It's Economy Year and Jeffery Made It So

The nearest Jeffery dealer will show you the car that you would have built yourself. A car of quality. A beautiful car of exclusive design. An economical car.

#### Do good, quick, clean Ironing

You can iron in any room in the house—or on the porch with a G-E Electric Iron. Attach it to any light socket, turn the switch and the G-E Iron is ready in a moment.

Aside from these conveniences, think of the time, money and steps a G-E Iron saves. Think of the lessened wear and tear on the family linen.

# With a G-E Electric Iron you get "Even Heat"

No spot too hot; it is no hotter at the point than at the heel—at the edges than in the center. This safeguards against scorches—makes the ironing go quicker and easier; saves time, which means saving electricity; in fact

# An average family ironing costs only 15c for electricity

Specially arranged air chambers in the G-E Iron hold the heat down directly to the ironing

surface. Using the heat this way also permits you to do considerable ironing with the electricity turned off.

The G-E trademark on this iron stands for quality it assures you a lifetime of satisfactory service.

The G-E Iron recommended for all round family use is the 6 lb. iron. Get it from the nearest store selling electrical goods. Price, with heel stand complete, including cord and attaching plug, \$3.50.

#### Banish hot-weather Discomfort

Turn the switch and command the faintest zephyr, or a sweeping breeze—as you please—and it shall be yours—in home, office, bedroom, ballroom or workshop. A simple device places the speed entirely within your control.

Twenty years of laboratory study and factory application are concentrated in the smooth-running, noiseless mechanism of the G-E. Electric Fan.

#### Its oscillating motion

silently stirring the air—like the breeze flow of nature—is only one of the many practical features of this fan.

Its sturdiness of construction, the perfect integrity of its materials and parts, its delicacy of balance throughout which prevents vibration and wear, all assure you a lifetime of satisfactory service.

As to Economy, sufficient to say that the G-E Fan, depending on the size, can be run

#### Three or four hours for one cent

—less than the cost of burning a single ordinary incandescent light.

G-E Fans are made in many sizes and styles for use in homes, stores, offices, hotels, restaurants and factories. Any desired finish to match surroundings may be ordered.

Look always for the big G-E trademark on the face of the fan. The nearest electrical dealer or your lighting company will show you the particular type of G-E Fan appropriate for your needs.

# GENERAL ELECTRIC COMPANY

less Offices in all large Cities The largest Electrical Manufacturer in the world

Agencies Everywhere

FROM a business standpoint the motor truck is probably the greatest economic factor ever introduced.

It has proved its economy, its productiveness and its downright efficiency over the horse in every possible respect.

Yet, in spite of this, some business men still prefer to be backward by continuing to use, and lose money on, the out-of-date methods of yesterday.

What does it cost you to do business with horses?

Ten to one you cannot answer!

But-

Whatever your answer might be to the above, how can you reply to the following:

The Peninsular Wet Wash Company of Portland, Oregon, replaced three teams (6 horses) with one Willys Utility Truck. And in addition to greatly reducing their hauling investment they cut delivery operating expenses \$250 a month or \$3000 a year. Bear in mind that one Willys Utility Truck alone effected this enormous saving.

Now what about your horses?

And this is but one of scores of similar cases!

Yet economy is not the greatest asset of this
truck. Increased business is what makes for increased profits, and there is where the real value
of this truck comes in.

With one of these trucks you do infinitely more work than you can do with three or four teams. You can cover more territory, get at more customers, develop more business—in short make more money.

Understand this is not a theoretical statement. Willys Utility Trucks are accomplishing this for hundreds of others. They can do precisely the same for you. Their adoption will increase your business and decrease the cost of getting and handling it.

We have the facts and figures in connection with your business to prove this. We will be glad to present them at any time you appoint.

Write us direct for literature, special body book, complete details and data. All gratis. Address Dept. 151.

#### The Willys-Overland Company, Toledo, Ohio

Three Quarter Ton Capacity-\$1350

Price includes chassis and driver's seat. Body as shown \$150 extra. Prices f.o.b. factory.

- stand the hour's test-but would never be good for much afterward.
- AN HOUR-THEN A REST-then another hour if you like—that is what the speed launch motor is guaranteed to do. But it must have that rest between times.
- NOW LET'S APPLY THAT to an automobile motor-in actual use. The average car in hands of the average driver-and especially the expert demonstrator -- is never driven to its limit for long at one time. A spurt, a stunt—then a good long rest—inspection and the necessary adjustments. And most any motor will stand up under that.
- OR; IF THE OWNER DRIVES carefully alwaysnever forgets-a motor of mediocre quality will stand up for quite some time.
- BUT IF, ONE DAY, he and the car happen to be feeling good and a friend tries to pass him on a

- those who, when you pay for a car, assume that the maker knew his business and gave you a product that does not call for nursing?
- THEN YOU CAN FORCE YOUR LOZIER to full speed as long as your own nerves will stand the strain. And when you have had enough the Lozier will say, "Come on!-Now let's do some real work."
- AND THE NEXT DAY when you go out with the family for a quiet, restful drive, you'll find that wonderful car in the same mood-none of the creaks and squeaks and noises you'd find in a carof lesser quality.
- "BUT," YOU MAY SAY, "I am not a speed maniac." All right. Nevertheless you do want to get there and back-regardless of weather or road conditions. Don't you?
- VERY WELL, THEN. YOU KNOW that, on

- in a competitive matter, we will add this: If you choose a Lozier—"Four" or "Six"—you will own a car that, in quality and price, cannot be sur-passed, if it can be equalled, in the world.
- AND WE'LL DO MORE-we'll back that statement with the Lozier guarantee.

# What You Get In This FOUR That You Do Not Get In Others

A greater proportion of manufactured parts.

A chain of quality-producing processes not equalled in the construction of any car at any price.

247 drop forgings produced in the greatest drop forge plant in the automobile industry.

Studebaker steel stampings in the rear axle housing and other parts in which others use castings of iron or aluminum.

The highest priced steels made to our own special formulæ.

Every steel shipment analyzed and tested; and, if accepted, subjected to two to four heat treatments. Studebaker steels used in this FOUR are thus doubled and trebled in strength.

Full floating rear axle with heat treated driving shaft which, in a special machine, is capable of being twisted seven times on itself before breaking

A front axle built to stand the same tremendous torsion test.

Springs that will withstand 200,000 complete oscillations in a machine built to break down springs.

Timken bearings protecting every point susceptible to strain and friction.

The only FOUR at the price which is Timken-equipped even to the wheel hubs.

A starting and lighting system without con-

stantly-moving

chains or

A body finish produced by no less than 24 distinct operationsmoney can't buy a better or more lasting finish.

A car in which quantity production is scientifically directed to the creation of the highest possible quality at the lowest possible

fly-wheel gearing-two units per-

fectly balanced, so certain in action

that they approach infallibility.

colombific manufacturing operation of debaker, band for it.

# There's "An Ocean Of Comfort" In B. V. D.

You wear a coat and a smile with B. V. D. On land or sea, in city or country, outdoors or in the office, B. V. D. takes the bite out of the "dog-days". It keeps you cool. Being loose-fitting, it lets invigorating air at your pores. Being light-woven, you hardly feel that you have it on. If you dance, B. V. D. leaves you arm, leg and body-free. Remember that all "Athletic" Underwear is not B. V. D.

For your own welfare, fix the B.V. D. Red Woven Label in your mind and make the salesman *show* it to you. If he can't or won't, walk out! On every B. V. D. Undergarment is sewed
